3) A new minion process or thread is created and provided with the contents of the decrypted message. The `_thread_return()` method is provided with the contents of the received message.

4) The new minion thread is created. The `_thread_return()` function starts up and actually calls out to the requested function contained in the job.

5) The requested function runs and returns a result. [Still in thread.]

6) The result of the function that’s run is encrypted and returned to the master’s ReqServer (TCP 4506 on master). [Still in thread.]

7) Thread exits. Because the main thread was only blocked for the time that it took to initialize the worker thread, many other requests could have been received and processed during this time.

### 36.5 A Note on ClearFuncs vs. AESFuncs

A common source of confusion is determining when messages are passed in the clear and when they are passed using encryption. There are two rules governing this behaviour:

1) ClearFuncs is used for intra-master communication and during the initial authentication handshake between a minion and master during the key exchange.

2) AESFuncs is used everywhere else.
36.6 Contributing

There is a great need for contributions to Salt and patches are welcome! The goal here is to make contributions clear, make sure there is a trail for where the code has come from, and most importantly, to give credit where credit is due!

There are a number of ways to contribute to Salt development.

For details on how to contribute documentation improvements please review Writing Salt Documentation.

36.6.1 Salt Coding Style

SaltStack has its own coding style guide that informs contributors on various coding approaches. Please review the :ref:`Salt Coding Style<coding-style>` documentation for information about Salt’s particular coding patterns.

Within the :ref:`Salt Coding Style<coding-style>` documentation, there is a section about running Salt’s `pylintrc` file. SaltStack recommends running the `pylintrc` file on any files you are changing with your code contribution before submitting a pull request to Salt’s repository. Please see the :ref:`Linting<pylint-instructions>` documentation for more information.

Sending a GitHub pull request

Sending pull requests on GitHub is the preferred method for receiving contributions. The workflow advice below mirrors GitHub’s own guide and is well worth reading.

1. Fork saltstack/salt on GitHub.
2. Make a local clone of your fork.
   
   ```
   git clone git@github.com:my-account/salt.git
   cd salt
   ```
3. Add saltstack/salt as a git remote.
   
   ```
   git remote add upstream https://github.com/saltstack/salt.git
   ```
4. Create a new branch in your clone.
   
   ```
   git fetch upstream
   git checkout -b fix-broken-thing upstream/2015.5
   ```
   
   If you’re working on a bug or documentation fix, create your branch from the oldest release branch that contains the bug or requires the documentation update. See Which Salt Branch?.

   ```
   git fetch upstream
   git checkout -b add-cool-feature upstream/develop
   ```
   
   If you’re working on a feature, create your branch from the develop branch.
5. Edit and commit changes to your branch.
vim path/to/file1 path/to/file2
git diff
git add path/to/file1 path/to/file2
git commit

Write a short, descriptive commit title and a longer commit message if necessary.

**Note:** If your change fixes a bug or implements a feature already filed in the issue tracker, be sure to reference the issue number in the commit message body.

```bash
fix broken things in file1 and file2

Fixes #31337. The issue is now eradicated from file1 and file2.

# Please enter the commit message for your changes. Lines starting
# with '#' will be ignored, and an empty message aborts the commit.
# On branch fix-broken-thing
# Changes to be committed:
#   modified: path/to/file1
#   modified: path/to/file2
```

If you get stuck, there are many introductory Git resources on [http://help.github.com](http://help.github.com).

6. Push your locally-committed changes to your GitHub fork,

   **Note:** You may want to rebase before pushing to work out any potential conflicts.

```bash
git fetch upstream
git rebase upstream/2015.5 fix-broken-thing
git push --set-upstream origin fix-broken-thing
```

or,

```bash
git fetch upstream
git rebase upstream/develop add-cool-feature
git push --set-upstream origin add-cool-feature
```

7. Find the branch on your GitHub salt fork.

   [https://github.com/my-account/salt/branches/fix-broken-thing](https://github.com/my-account/salt/branches/fix-broken-thing)

8. Open a new pull request.

   Click on **Pull Request** on the right near the top of the page,

   [https://github.com/my-account/salt/pull/new/fix-broken-thing](https://github.com/my-account/salt/pull/new/fix-broken-thing)

   (a) If your branch is a fix for a release branch, choose that as the base branch (e.g. 2015.5),

   If your branch is a feature, choose **develop** as the base branch,

   [https://github.com/my-account/salt/compare/saltstack:develop...add-cool-feature](https://github.com/my-account/salt/compare/saltstack:develop...add-cool-feature)

   (b) Review that the proposed changes are what you expect.

   (c) Write a descriptive comment. Include links to related issues (e.g. `Fixes #31337`) in the comment field.
(d) Click Create pull request.

9. Salt project members will review your pull request and automated tests will run on it.

   If you recognize any test failures as being related to your proposed changes or if a reviewer asks for modifications:
   (a) Make the new changes in your local clone on the same local branch.
   (b) Push the branch to GitHub again using the same commands as before.
   (c) New and updated commits will be added to the pull request automatically.
   (d) Feel free to add a comment to the discussion.

Note: Jenkins

Pull request against saltstack/salt are automatically tested on a variety of operating systems and configurations. On average these tests take 30 minutes. Depending on your GitHub notification settings you may also receive an email message about the test results.

Test progress and results can be found at http://jenkins.saltstack.com/.

Which Salt branch?

GitHub will open pull requests against Salt's main branch, develop, by default. Ideally, features should go into develop and bug fixes and documentation changes should go into the oldest supported release branch affected by the bug or documentation update. See Sending a GitHub pull request.

If you have a bug fix or doc change and have already forked your working branch from develop and do not know how to rebase your commits against another branch, then submit it to develop anyway and we'll be sure to backport it to the correct place.

36.6.2 The current release branch

The current release branch is the most recent stable release. Pull requests containing bug fixes should be made against the release branch.

The branch name will be a date-based name such as 2015.5.

Bug fixes are made on this branch so that minor releases can be cut from this branch without introducing surprises and new features. This approach maximizes stability.

The Salt development team will "merge-forward" any fixes made on the release branch to the develop branch once the pull request has been accepted. This keeps the fix in isolation on the release branch and also keeps the develop branch up-to-date.

Note: Closing GitHub issues from commits

This "merge-forward" strategy requires that the magic keywords to close a GitHub issue appear in the commit message text directly. Only including the text in a pull request will not close the issue.

GitHub will close the referenced issue once the commit containing the magic text is merged into the default branch (develop). Any magic text input only into the pull request description will not be seen at the Git-level when those commits are merged-forward. In other words, only the commits are merged-forward and not the pull request.
36.6.3 The develop branch

The develop branch is unstable and bleeding-edge. Pull requests containing feature additions or non-bug-fix changes should be made against the develop branch.

The Salt development team will back-port bug fixes made to develop to the current release branch if the contributor cannot create the pull request against that branch.

Keeping Salt Forks in Sync

Salt is advancing quickly. It is therefore critical to pull upstream changes from upstream into your fork on a regular basis. Nothing is worse than putting hard work into a pull request only to see bunches of merge conflicts because it has diverged too far from upstream.

See also:

GitHub Fork a Repo Guide

The following assumes origin is the name of your fork and upstream is the name of the main saltstack/salt repository.

1. View existing remotes.

```
git remote -v
```

2. Add the upstream remote.

```
# For ssh github
git remote add upstream git@github.com:saltstack/salt.git

# For https github
git remote add upstream https://github.com/saltstack/salt.git
```

3. Pull upstream changes into your clone.

```
git fetch upstream
```

4. Update your copy of the develop branch.

```
git checkout develop
git merge --ff-only upstream/develop
```

If Git complains that a fast-forward merge is not possible, you have local commits.

- Run `git pull --rebase origin develop` to rebase your changes on top of the upstream changes.
- Or, run `git branch <branch-name>` to create a new branch with your commits. You will then need to reset your develop branch before updating it with the changes from upstream.

If Git complains that local files will be overwritten, you have changes to files in your working directory. Run `git status` to see the files in question.

5. Update your fork.

```
git push origin develop
```

6. Repeat the previous two steps for any other branches you work with, such as the current release branch.
Posting patches to the mailing list

Patches will also be accepted by email. Format patches using `git format-patch` and send them to the `salt-users` mailing list. The contributor will then get credit for the patch, and the Salt community will have an archive of the patch and a place for discussion.

Backporting Pull Requests

If a bug is fixed on `develop` and the bug is also present on a currently-supported release branch it will need to be back-ported to all applicable branches.

**Note:** Most Salt contributors can skip these instructions

These instructions do not need to be read in order to contribute to the Salt project! The SaltStack team will back-port fixes on behalf of contributors in order to keep the contribution process easy.

These instructions are intended for frequent Salt contributors, advanced Git users, SaltStack employees, or independent souls who wish to back-port changes themselves.

It is often easiest to fix a bug on the oldest supported release branch and then merge that branch forward into `develop` (as described earlier in this document). When that is not possible the fix must be back-ported, or copied, into any other affected branches.

These steps assume a pull request #1234 has been merged into `develop`. And `upstream` is the name of the remote pointing to the main Salt repo.

1. Identify the oldest supported release branch that is affected by the bug.
2. Create a new branch for the back-port by reusing the same branch from the original pull request.

   Name the branch `bp-<NNNN>` and use the number of the original pull request.

   ```
   git fetch upstream refs/pull/1234/head:bp-1234
   git checkout bp-1234
   ```

3. Find the parent commit of the original pull request.

   The parent commit of the original pull request must be known in order to rebase onto a release branch. The easiest way to find this is on GitHub.

   Open the original pull request on GitHub and find the first commit in the list of commits. Select and copy the SHA for that commit. The parent of that commit can be specified by appending `~1` to the end.

4. Rebase the new branch on top of the release branch.

   ```
   git rebase --onto <release-branch> <orig-base> bp-1234
   ```

   Note, release branches prior to 2015.5 will not be able to make use of rebase and must use cherry-picking instead.

5. Push the back-port branch to GitHub and open a new pull request.

   Opening a pull request for the back-port allows for the test suite and normal code-review process.
**Issue and Pull Request Labeling System**

SaltStack uses several labeling schemes to help facilitate code contributions and bug resolution. See the *Labels and Milestones* documentation for more information.

### 36.7 Deprecating Code

Salt should remain backwards compatible, though sometimes, this backwards compatibility needs to be broken because a specific feature and/or solution is no longer necessary or required. At first one might think, let me change this code, it seems that it’s not used anywhere else so it should be safe to remove. Then, once there’s a new release, users complain about functionality which was removed and they where using it, etc. This should, at all costs, be avoided, and, in these cases, *that* specific code should be deprecated.

In order to give users enough time to migrate from the old code behavior to the new behavior, the deprecation time frame should be carefully determined based on the significance and complexity of the changes required by the user.

Salt feature releases are based on the Periodic Table. Any new features going into the develop branch will be named after the next element in the Periodic Table. For example, Beryllium was the feature release name of the develop branch before the 2015.8 branch was tagged. At that point in time, any new features going into the develop branch after 2015.8 was branched were part of the Boron feature release.

A deprecation warning should be in place for at least two major releases before the deprecated code and its accompanying deprecation warning are removed. More time should be given for more complex changes. For example, if the current release under development is Sodium, the deprecated code and associated warnings should remain in place and warn for at least Aluminum.

To help in this deprecation task, salt provides `salt.utils.warn_until`. The idea behind this helper function is to show the deprecation warning to the user until salt reaches the provided version. Once that provided version is equalled, `salt.utils.warn_until` will raise a `RuntimeError` making salt stop its execution. This stoppage is unpleasant and will remind the developer that the deprecation limit has been reached and that the code can then be safely removed.

Consider the following example:

```python
def some_function(bar=False, foo=None):
    if foo is not None:
        salt.utils.warn_until(
            'Aluminum',
            'The "foo" argument has been deprecated and its ' 
            'functionality removed, as such, its usage is no longer ' 
            'required.'
        )
```

Development begins on the Aluminum release when the Magnesium branch is forked from the develop branch. Once this occurs, all uses of the `warn_until` function targeting Aluminum, along with the code they are warning about should be removed from the code.
36.8 Dunder Dictionaries

Salt provides several special ‘dunder’ dictionaries as a convenience for Salt development. These include __opts__, __context__, __salt__, and others. This document will describe each dictionary and detail where they exist and what information and/or functionality they provide.

36.8.1 __opts__

Available in
- All loader modules

The __opts__ dictionary contains all of the options passed in the configuration file for the master or minion.

Note: In many places in salt, instead of pulling raw data from the __opts__ dict, configuration data should be pulled from the salt get functions such as config.get, aka __salt__['config.get']('foo:bar'). The get functions also allow for dict traversal via the : delimiter. Consider using get functions whenever using __opts__ or __pillar__ and __grains__ (when using grains for configuration data)

The configuration file data made available in the __opts__ dictionary is the configuration data relative to the running daemon. If the modules are loaded and executed by the master, then the master configuration data is available, if the modules are executed by the minion, then the minion configuration is available. Any additional information passed into the respective configuration files is made available.

36.8.2 __salt__

Available in
- Execution Modules
- State Modules
- Returners
- Runners

__salt__ contains the execution module functions. This allows for all functions to be called as they have been set up by the salt loader.

```plaintext
__salt__['cmd.run']('fdisk -l')
__salt__['network.ip_addrs']()
```

Note: When used in runners, __salt__ references other runner modules, and not execution modules.

36.8.3 __grains__

Available in
- Execution Modules
- State Modules
• Returners
• External Pillar

The __grains__ dictionary contains the grains data generated by the minion that is currently being worked with. In execution modules, state modules and returners this is the grains of the minion running the calls, when generating the external pillar the __grains__ is the grains data from the minion that the pillar is being generated for.

### 36.8.4 __pillar__

**Available in**

- Execution Modules
- State Modules
- Returners

The __pillar__ dictionary contains the pillar for the respective minion.

### 36.8.5 __context__

__context__ exists in state modules and execution modules.

During a state run the __context__ dictionary persists across all states that are run and then is destroyed when the state ends.

When running an execution module __context__ persists across all module executions until the modules are refreshed; such as when `saltutil.sync_all` or `state.apply` are executed.

A great place to see how to use __context__ is in the cp.py module in salt/modules/cp.py. The fileclient authenticates with the master when it is instantiated and then is used to copy files to the minion. Rather than create a new fileclient for each file that is to be copied down, one instance of the fileclient is instantiated in the __context__ dictionary and is reused for each file. Here is an example from salt/modules/cp.py:

```python
if not 'cp.fileclient' in __context__:
    __context__['cp.fileclient'] = salt.fileclient.get_file_client(__opts__)
```

**Note:** Because __context__ may or may not have been destroyed, always be sure to check for the existence of the key in __context__ and generate the key before using it.

### 36.9 External Pillars

Salt provides a mechanism for generating pillar data by calling external pillar interfaces. This document will describe an outline of an ext_pillar module.

#### 36.9.1 Location

Salt expects to find your ext_pillar module in the same location where it looks for other python modules. If the extension_modules option in your Salt master configuration is set, Salt will look for a pillar directory under there and load all the modules it finds. Otherwise, it will look in your Python site-packages salt/pillar directory.
36.9.2 Configuration

The external pillars that are called when a minion refreshes its pillars is controlled by the `ext_pillar` option in the Salt master configuration. You can pass a single argument, a list of arguments or a dictionary of arguments to your pillar:

```python
ext_pillar:
    - example_a: some argument
    - example_b:
        - argumentA
        - argumentB
    - example_c:
        keyA: valueA
        keyB: valueB
```

36.9.3 The Module

36.9.4 Imports and Logging

Import modules your external pillar module needs. You should first include generic modules that come with stock Python:

```python
import logging
```

And then start logging. This is an idiomatic way of setting up logging in Salt:

```python
log = logging.getLogger(__name__)
```

Finally, load modules that are specific to what you are doing. You should catch import errors and set a flag that the `__virtual__` function can use later.

```python
try:
    import weird_thing
    EXAMPLE_A_LOADED = True
except ImportError:
    EXAMPLE_A_LOADED = False
```

36.9.5 Options

If you define an `__opts__` dictionary, it will be merged into the `__opts__` dictionary handed to the `ext_pillar` function later. This is a good place to put default configuration items. The convention is to name things `module-name.option`.

```python
__opts__ = { 'example_a.someconfig': 137 }
```

36.9.6 Initialization

If you define an `__init__` function, it will be called with the following signature:

```python
def __init__( __opts__ ):
    # Do init work here
```
Note: The __init__ function is ran every time a particular minion causes the external pillar to be called, so don't put heavy initialization code here. The __init__ functionality is a side-effect of the Salt loader, so it may not be as useful in pillars as it is in other Salt items.

### 36.9.7 __virtual__

If you define a __virtual__ function, you can control whether or not this module is visible. If it returns False then Salt ignores this module. If it returns a string, then that string will be how Salt identifies this external pillar in its ext_pillar configuration. If you're not renaming the module, simply return True in the __virtual__ function, which is the same as if this function did not exist, then, the name Salt's ext_pillar will use to identify this module is its conventional name in Python.

This is useful to write modules that can be installed on all Salt masters, but will only be visible if a particular piece of software your module requires is installed.

```python
# This external pillar will be known as 'example_a'
def __virtual__():
    if EXAMPLE_A_LOADED:
        return True
    return False

# This external pillar will be known as 'something_else'
__virtualname__ = 'something_else'
def __virtual__():
    if EXAMPLE_A_LOADED:
        return __virtualname__
    return False
```

### 36.9.8 ext_pillar

This is where the real work of an external pillar is done. If this module is active and has a function called ext_pillar, whenever a minion updates its pillar this function is called.

How it is called depends on how it is configured in the Salt master configuration. The first argument is always the current pillar dictionary, this contains pillar items that have already been added, starting with the data from pillar_roots, and then from any already-ran external pillars.

Using our example above:

```python
ext_pillar( id, pillar, 'some argument' )  # example_a
ext_pillar( id, pillar, 'argumentA', 'argumentB' )  # example_b
ext_pillar( id, pillar, keyA='valueA', keyB='valueB' )  # example_c
```

In the example_a case, pillar will contain the items from the pillar_roots, in example_b pillar will contain that plus the items added by example_a, and in example_c pillar will contain that plus the items added by example_b. In all three cases, id will contain the ID of the minion making the pillar request.

This function should return a dictionary, the contents of which are merged in with all of the other pillars and returned to the minion. Note: this function is called once for each minion that fetches its pillar data.

```python
def ext_pillar( minion_id, pillar, *args, **kwargs ):
    my_pillar = {}
```
You shouldn't just add items to `pillar` and return that, since that will cause Salt to merge data that already exists. Rather, just return the items you are adding or changing. You could, however, use `pillar` in your module to make some decision based on pillar data that already exists.

This function has access to some useful globals:

- `__opts__` A dictionary of mostly Salt configuration options. If you had an `__opts__` dictionary defined in your module, those values will be included.
- `__salt__` A dictionary of Salt module functions, useful so you don't have to duplicate functions that already exist. E.g. `__salt__['cmd.run']( 'ls -l' )` Note, runs on the master
- `__grains__` A dictionary of the grains of the minion making this pillar call.

### 36.9.9 Example configuration

As an example, if you wanted to add external pillar via the `cmd_json` external pillar, add something like this to your master config:

```yaml
ext_pillar:
  - cmd_json: 'echo {"arg":"value"}'
```

### 36.9.10 Reminder

Just as with traditional pillars, external pillars must be refreshed in order for minions to see any fresh data:

```bash
salt '*' saltutil.refresh_pillar
```

### 36.10 Installing Salt for development

Clone the repository using:

```bash
git clone https://github.com/saltstack/salt
```

**Note:** tags

Just cloning the repository is enough to work with Salt and make contributions. However, fetching additional tags from git is required to have Salt report the correct version for itself. To do this, first add the git repository as an upstream source:

```bash
git remote add upstream https://github.com/saltstack/salt
```

Fetching tags is done with the `git `fetch` utility:

```bash
git fetch --tags upstream
```

Create a new `virtualenv`:
virtualenv /path/to/your/virtualenv

Avoid making your virtualenv path too long. On Arch Linux, where Python 3 is the default installation of Python, use the virtualenv2 command instead of virtualenv.

Note: Using system Python modules in the virtualenv

To use already-installed python modules in virtualenv (instead of having pip download and compile new ones), run virtualenv --system-site-packages. Using this method eliminates the requirement to install the salt dependencies again, although it does assume that the listed modules are all installed in the system PYTHONPATH at the time of virtualenv creation.

Activate the virtualenv:

source /path/to/your/virtualenv/bin/activate

Install Salt (and dependencies) into the virtualenv:

```bash
pip install M2Crypto     # Don't install on Debian/Ubuntu (see below)
pip install pyzmq PyYAML pycrypto msgpack-python jinja2 psutil
pip install -e ./salt    # the path to the salt git clone from above
```

Note: Installing M2Crypto

swig and libssl-dev are required to build M2Crypto. To fix the error command 'swig' failed with exit status 1 while installing M2Crypto, try installing it with the following command:

```bash
env SWIG_FEATURES="-cpperraswarn -includeall -D__`uname -m`__ -I/usr/include/openssl" pip install M2Crypto
```

Debian and Ubuntu systems have modified openssl libraries and mandate that a patched version of M2Crypto be installed. This means that M2Crypto needs to be installed via apt:

```bash
apt-get install python-m2crypto
```

This also means that pulling in the M2Crypto installed using apt requires using --system-site-packages when creating the virtualenv.

If you're using a platform other than Debian or Ubuntu, and you are installing M2Crypto via pip instead of a system package, then you will also need the gcc compiler.

Note: Installing psutil

Python header files are required to build this module, otherwise the pip install will fail. If your distribution separates binaries and headers into separate packages, make sure that you have the headers installed. In most Linux distributions which split the headers into their own package, this can be done by installing the python-dev or python-devel package. For other platforms, the package will likely be similarly named.

Note: Installing dependencies on OS X.

You can install needed dependencies on OS X using homebrew or macports. See OS X Installation.
Warning: Installing on RedHat-based Distro

If installing from pip (or from source using `setup.py install`), be advised that the `yum-utils` package is needed for Salt to manage packages on RedHat-based systems.

36.10.1 Running a self-contained development version

During development it is easiest to be able to run the Salt master and minion that are installed in the virtualenv you created above, and also to have all the configuration, log, and cache files contained in the virtualenv as well.

Copy the master and minion config files into your virtualenv:

```
mkdir -p /path/to/your/virtualenv/etc/salt
cp ./salt/conf/master ./salt/conf/minion /path/to/your/virtualenv/etc/salt/
```

Edit the master config file:

1. Uncomment and change the `user: root` value to your own user.
2. Uncomment and change the `root_dir: /` value to point to `/path/to/your/virtualenv`.
3. If you are running version 0.11.1 or older, uncomment, and change the `pidfile: /var/run/salt-master.pid` value to point to `/path/to/your/virtualenv/salt-master.pid`.
4. If you are also running a non-development version of Salt you will have to change the `publish_port` and `ret_port` values as well.

Edit the minion config file:

1. Repeat the edits you made in the master config for the `user` and `root_dir` values as well as any port changes.
2. If you are running version 0.11.1 or older, uncomment, and change the `pidfile: /var/run/salt-minion.pid` value to point to `/path/to/your/virtualenv/salt-minion.pid`.
3. Uncomment and change the `master: salt` value to point at `localhost`.
4. Uncomment and change the `id:` value to something descriptive like `saltdev`. This isn't strictly necessary but it will serve as a reminder of which Salt installation you are working with.
5. If you changed the `ret_port` value in the master config because you are also running a non-development version of Salt, then you will have to change the `master_port` value in the minion config to match.

Note: Using `salt-call` with a Standalone Minion

If you plan to run `salt-call` with this self-contained development environment in a masterless setup, you should invoke `salt-call` with `-c /path/to/your/virtualenv/etc/salt` so that salt can find the minion config file. Without the `-c` option, Salt finds its config files in `/etc/salt`.

Start the master and minion, accept the minion's key, and verify your local Salt installation is working:

```
cd /path/to/your/virtualenv
salt-master -c ./etc/salt -d
salt-minion -c ./etc/salt -d
salt-key -c ./etc/salt -L
salt-key -c ./etc/salt -A
salt -c ./etc/salt '*' test.ping
```
Running the master and minion in debug mode can be helpful when developing. To do this, add `-l debug` to the calls to `salt-master` and `salt-minion`. If you would like to log to the console instead of to the log file, remove the `-d`.

**Note:** Too long socket path?

Once the minion starts, you may see an error like the following:

```
zmq.core.error.ZMQError: ipc path "/path/to/your/virtualenv/
var/run/salt/minion/minion_event_7824dc8cfd7a8f675593af780b96249f_pub.ipc"
is longer than 107 characters (sizeof(sockaddr_un.sun_path)).
```

This means that the path to the socket the minion is using is too long. This is a system limitation, so the only workaround is to reduce the length of this path. This can be done in a couple different ways:

1. Create your virtualenv in a path that is short enough.
2. Edit the `sock_dir` minion config variable and reduce its length. Remember that this path is relative to the value you set in `root_dir`.

**Note:** The socket path is limited to 107 characters on Solaris and Linux, and 103 characters on BSD-based systems.

**Note:** File descriptor limits

Ensure that the system open file limit is raised to at least 2047:

```
# check your current limit
ulimit -n

# raise the limit. persists only until reboot
# use 'limit descriptors 2047' for c-shell
ulimit -n 2047
```

To set file descriptors on OSX, refer to the [OS X Installation](https://github.com/saltstack/salt) instructions.

**Changing Default Paths**

Instead of updating your configuration files to point to the new root directory and having to pass the new configuration directory path to all of Salt’s CLI tools, you can explicitly tweak the default system paths that Salt expects:

```
GENERATE_SALT_SYSPATHS=1 pip install --global-option='--salt-root-dir=/path/to/your/
~/.virtualenv/'
    -e ./salt # the path to the salt git clone from above
```

You can now call all of Salt’s CLI tools without explicitly passing the configuration directory.

**Additional Options**

In case you want to distribute your virtualenv, you probably don’t want to include Salt’s clone `.git/` directory, and, without it, Salt won’t report the accurate version. You can tell `setup.py` to generate the hardcoded version information which is distributable:
Instead of passing those two environmental variables, you can just pass a single one which will trigger the other two:

```
MIMIC_SALT_INSTALL=1 pip install --global-option='--salt-root-dir=/path/to/your/virtualenv/' \  
-e ./salt # the path to the salt git clone from above
```

This last one will grant you an editable salt installation with hardcoded system paths and version information.

### 36.10.2 Installing Salt from the Python Package Index

If you are installing using `easy_install`, you will need to define a `USE_SETUPTOOLS` environment variable, otherwise dependencies will not be installed:

```
USE_SETUPTOOLS=1 easy_install salt
```

### 36.10.3 Editing and previewing the documentation

You need `sphinx-build` command to build the docs. In Debian/Ubuntu this is provided in the `python-sphinx` package. Sphinx can also be installed to a virtualenv using pip:

```
pip install Sphinx==1.3b2
```

Change to salt documentation directory, then:

```
cd doc; make html
```

- This will build the HTML docs. Run `make` without any arguments to see the available make targets, which include `html`, `man`, and `text`.
- The docs then are built within the `docs/_build/` folder. To update the docs after making changes, run `make` again. 
- The help information on each module or state is culled from the python code that runs for that piece. Find them in `salt/modules/` or `salt/states/`.
- To build the docs on Arch Linux, the `python2-sphinx` package is required. Additionally, it is necessary to tell `make` where to find the proper `sphinx-build` binary, like so:

```
make SPHINXBUILD=sphinx-build2 html
```

- To build the docs on RHEL/CentOS 6, the `python-sphinx10` package must be installed from EPEL, and the following make command must be used:

```
make SPHINXBUILD=sphinx-1.0-build html
```

Once you've updated the documentation, you can run the following command to launch a simple Python HTTP server to see your changes:
36.10.4 Running unit and integration tests

Run the test suite with following command:

```
./setup.py test
```

See here for more information regarding the test suite.

36.10.5 Issue and Pull Request Labeling System

SaltStack uses several labeling schemes to help facilitate code contributions and bug resolution. See the Labels and Milestones documentation for more information.

36.11 GitHub Labels and Milestones

SaltStack uses several label categories, as well as milestones, to triage incoming issues and pull requests in the GitHub issue tracker. Labels are used to sort issues by type, priority, severity, status, functional area, functional group, and targeted release and pull requests by status, functional area, functional group, type of change, and test status. Milestones are used to indicate whether an issue is fully triaged or is scheduled to be fixed by SaltStack in an upcoming sprint.

36.11.1 Milestones

All issues are assigned to a milestone, whereas pull requests are almost never assigned to a milestone as the mean lifetime of pull requests is short enough that there is no need to track them temporally.

SaltStack uses milestones to indicate which issues are blocked on submitter or upstream actions, are approved, or are scheduled to be fixed or implemented in an upcoming sprint. If an issue is not attached to a sprint milestone, you are welcome to work on it at your own desire and convenience. If it is attached to a sprint milestone and you have already begun working on it or have a solution in mind or have other ideas related to the issue, you are encouraged to coordinate with the assignee via the GitHub issue tracker to create the best possible solution or implementation.

**Approved** The issue has been validated and has all necessary information.

**Blocked** The issue is waiting on actions by parties outside of SaltStack, such as receiving more information from the submitter or resolution of an upstream issue. This milestone is usually applied in conjunction with the labels Info Needed, Question, Expected Behavior, Won't Fix For Now, or Upstream Bug.

**Under Review** The issue is having further validation done by a SaltStack engineer.

**<Sprint>** The issue is being actively worked on by a SaltStack engineer. Sprint milestones names are constructed from the chemical symbol of the next release's codename and the number of sprints until that release is made. For example, if the next release codename is Neon and there are five sprints until that release, the corresponding sprint milestone will be called Ne 5. See <topics/releases/version_numbers> for a discussion of Salt's release codenames.
### 36.11.2 Labels

Labels are used to sort and describe issues and pull requests. Some labels are usually reserved for one or the other, though most labels may be applied to both.

New issues will receive at least one label and a milestone, and new pull requests will receive at least one label. Except for the `functional area` and `functional group` label categories, issues will generally receive only up to one label per category.

#### Type

Issues are categorized into one of several types. Type labels are almost never used for pull requests. GitHub treats pull requests like issues in many ways, so a pull request could be considered an issue with an implicit `Pull Request` type label applied.

**Feature** The issue is a request for new functionality including changes, enhancements, refactors, etc.

**Bug** The issue documents broken, incorrect, or confusing behavior. This label is always accompanied by a `severity` label.

**Duplicate** The issue is a duplicate of another feature request or bug report.

**Upstream Bug** The issue is a result of an upstream issue.

**Question** The issue is more of a question than a request for new features or a report of broken features, but can sometimes lead to further discussion or changes of confusing or incongruous behavior or documentation.

**Expected Behavior** The issue is a bug report of intended functionality.

#### Priority

An issue's priority is relative to its `functional area`. If a bug report, for example, about `gitfs` indicates that all users of `gitfs` will encounter this bug, then a `P1` label will be applied, even though users who are not using `gitfs` will not encounter the bug. If a feature is requested by many users, it may be given a high priority.

**P1** The issue will be seen by all users.

**P2** The issue will be seen by most users.

**P3** The issue will be seen by about half of users.

**P4** The issue will not be seen by most users. Usually the issue is a very specific use case or corner case.

#### Severity

Severity labels are almost always only applied to issues labeled `Bug`.

**Blocker** The issue is blocking an impending release.

**Critical** The issue causes data loss, crashes or hangs salt processes, makes the system unresponsive, etc.

**High Severity** The issue reports incorrect functionality, bad functionality, a confusing user experience, etc.

**Medium Severity** The issue reports cosmetic items, formatting, spelling, colors, etc.
Functional Area

Many major components of Salt have corresponding GitHub labels. These labels are applied to all issues and pull requests as is reasonably appropriate. They are useful in organizing issues and pull requests according to the source code relevant to issues or the source code changed by pull requests.

- Execution Module
- File Servers
- Grains
- Multi-Master
- Packaging Related to packaging of Salt, not Salt's support for package management.
- Pillar
- RAET
- Returners
- Runners
- SPM
- Salt-API
- Salt-Cloud
- Salt-SSH
- Salt-Syndic
- State Module
- Tests
- Transport
- Windows
- ZMQ

Functional Group

These labels sort issues and pull requests according to the internal SaltStack engineering teams.

Core The issue or pull request relates to code that is central or existential to Salt itself.

Platform The issue or pull request relates to support and integration with various platforms like traditional operating systems as well as containers, platform-based utilities like filesystems, command schedulers, etc., and system-based applications like webservers, databases, etc.

RIoT The issue or pull request relates to support and integration with various abstract systems like cloud providers, hypervisors, API-based services, etc.

Console The issue or pull request relates to the SaltStack enterprise console.

Documentation The issue or pull request relates to documentation.
Status

Status labels are used to define and track the state of issues and pull requests. Not all potential statuses correspond to a label, but some statuses are common enough that labels have been created for them. If an issue has not been moved beyond the Blocked milestone, it is very likely that it will only have a status label.

**Bugfix -back-port** The pull request needs to be back-ported to an older release branch. This is done by recreating the pull request against that branch. Once the back-port is completed, this label is replaced with a **Bugfix -[Done] back-ported** label. Normally, new features should go into the develop and bug fixes into the oldest supported release branch, see <which-salt-branch>.

**Bugfix -[Done] back-ported** The pull request has been back-ported to an older branch.

**Cannot Reproduce** The issue is a bug and has been reviewed by a SaltStack engineer, but it cannot be replicated with the provided information and context. Those involved with the bug will need to work through additional ideas until the bug can be isolated and verified.

**Confirmed** The issue is a bug and has been confirmed by a SaltStack engineer, who often documents a minimal working example that reproduces the bug.

**Fixed Pending Verification** The issue is a bug and has been fixed by one or more pull requests, which should link to the issue. Closure of the issue is contingent upon confirmation of resolution from the submitter. If the submitter reports a negative confirmation, this label is removed. If no response is given after a few weeks, then the issue will be assumed fixed and closed.

**Info Needed** The issue needs more information before it can be verified and resolved. For a feature request this may include a description of the use cases. Almost all bug reports need to include at least the versions of salt and its dependencies, the system type and version, commands used, debug logs, error messages, and relevant configs.

**Pending Changes** The pull request needs additional changes before it can be merged.

**Pending Discussion** The issue or pull request needs more discussion before it can be closed or merged. The status of the issue or pull request is not clear or apparent enough for definite action to be taken, or additional input from SaltStack, the submitter, or another party has been requested.

If the issue is not a pull request, once the discussion has arrived at a cogent conclusion, this label will be removed and the issue will be accepted. If it is a pull request, the results of the discussion may require additional changes and thus, a **Pending Changes** label.

**Won't Fix for Now** The issue is legitimate, but it is not something the SaltStack team is currently able or willing to fix or implement. Issues having this label may be revisited in the future.

Type of Change

Every pull request should receive a change label. These labels measure the quantity of change as well as the significance of the change. The amount of change and the importance of the code area changed are considered, but often the depth of secondary code review required and the potential repercussions of the change may also advise the label choice.

Core code areas include: state compiler, crypto engine, master and minion and syndic daemons, transport, pillar rendering, loader, transport layer, event system, salt.utils, client, cli, logging, netapi, runner engine, templating engine, top file compilation, file client, file server, mine, salt-ssh, test runner, etc.

Non-core code usually constitutes the specific set of plugins for each of the several plugin layers of Salt: execution modules, states, runners, returners, clouds, etc.

**Minor Change**

- Less than 64 lines changed, or
• Less than 8 core lines changed

Medium Change
• Less than 256 lines changed, or
• Less than 64 core lines changed

Master Change
• More than 256 lines changed, or
• More than 64 core lines changed

Expert Change
• Needs specialized, in-depth review

Test Status

These labels relate to the status of the automated tests that run on pull requests. If the tests on a pull request fail and are not overridden by one of these labels, the pull request submitter needs to update the code and/or tests so that the tests pass and the pull request can be merged.

Lint The pull request has passed all tests except for the code lint checker.

Tests Passed The pull request has passed all tests even though some test results are negative. Sometimes the automated testing infrastructure will encounter internal errors unrelated to the code change in the pull request that cause test runs to fail. These errors can be caused by cloud host and network issues and also Jenkins issues like erroneously accumulating workspace artifacts, resource exhaustion, and bugs that arise from long running Jenkins processes.

Other

These labels indicate miscellaneous issue types or statuses that are common or important enough to be tracked and sorted with labels.

Awesome The pull request implements an especially well crafted solution, or a very difficult but necessary change.

Help Wanted The issue appears to have a simple solution. Issues having this label should be a good starting place for new contributors to Salt.

Needs Testcase The issue or pull request relates to a feature that needs test coverage. The pull request containing the tests should reference the issue or pull request having this label, whereupon the label should be removed.

Regression The issue is a bug that breaks functionality known to work in previous releases.

Story The issue is used by a SaltStack engineer to track progress on multiple related issues in a single place.

Stretch The issue is an optional goal for the current sprint but may not be delivered.

ZD The issue is related to a Zendesk customer support ticket.

<Release> The issue is scheduled to be implemented by <Release>. See <topics/releases/version_numbers> for a discussion of Salt’s release codenames.

36.12 Logging Internals

TODO
36.13 Modular Systems

When first working with Salt, it is not always clear where all of the modular components are and what they do. Salt comes loaded with more modular systems than many users are aware of, making Salt very easy to extend in many places.

The most commonly used modular systems are execution modules and states. But the modular systems extend well beyond the more easily exposed components and are often added to Salt to make the complete system more flexible.

36.13.1 Execution Modules

Execution modules make up the core of the functionality used by Salt to interact with client systems. The execution modules create the core system management library used by all Salt systems, including states, which interact with minion systems.

Execution modules are completely open ended in their execution. They can be used to do anything required on a minion, from installing packages to detecting information about the system. The only restraint in execution modules is that the defined functions always return a JSON serializable object.

For a list of all built in execution modules, click here.

For information on writing execution modules, see this page.

36.13.2 Interactive Debugging

Sometimes debugging with print() and extra logs sprinkled everywhere is not the best strategy.

IPython is a helpful debug tool that has an interactive python environment which can be embedded in python programs.

First the system will require IPython to be installed.

```
# Debian
apt-get install ipython

# Arch Linux
pacman -Syu ipython2

# RHEL/CentOS (via EPEL)
yum install python-ipython
```

Now, in the troubling python module, add the following line at a location where the debugger should be started:

```
test = 'test123'
import IPython; IPython.embed_kernel()
```

After running a Salt command that hits that line, the following will show up in the log file:

```
[CRITICAL] To connect another client to this kernel, use:
[IPKernelApp] --existing kernel-31271.json
```

Now on the system that invoked embed_kernel, run the following command from a shell:

```
# NOTE: use ipython2 instead of ipython for Arch Linux
ipython console --existing
```
This provides a console that has access to all the vars and functions, and even supports tab-completion.

```
print(test)
test123
```

To exit IPython and continue running Salt, press Ctrl-d to logout.

### 36.13.3 State Modules

State modules are used to define the state interfaces used by Salt States. These modules are restrictive in that they must follow a number of rules to function properly.

*Note:* State modules define the available routines in sls files. If calling an execution module directly is desired, take a look at the `module` state.

### 36.13.4 Auth

The auth module system allows for external authentication routines to be easily added into Salt. The `auth` function needs to be implemented to satisfy the requirements of an auth module. Use the `pam` module as an example.

### 36.13.5 Fileserver

The fileserver module system is used to create fileserver backends used by the Salt Master. These modules need to implement the functions used in the fileserver subsystem. Use the `gitfs` module as an example.

### 36.13.6 Grains

Grain modules define extra routines to populate grains data. All defined public functions will be executed and MUST return a Python dict object. The dict keys will be added to the grains made available to the minion.

### 36.13.7 Output

The output modules supply the outputter system with routines to display data in the terminal. These modules are very simple and only require the `output` function to execute. The default system outputter is the `nested` module.

### 36.13.8 Pillar

Used to define optional external pillar systems. The pillar generated via the filesystem pillar is passed into external pillars. This is commonly used as a bridge to database data for pillar, but is also the backend to the libvirt state used to generate and sign libvirt certificates on the fly.

### 36.13.9 Renderers

Renderers are the system used to render sls files into salt highdata for the state compiler. They can be as simple as the `py` renderer and as complex as `stateconf` and `pydsl`.
36.13.10 Returners

Returners are used to send data from minions to external sources, commonly databases. A full returner will implement all routines to be supported as an external job cache. Use the redis returner as an example.

36.13.11 Runners

Runners are purely master-side execution sequences.

36.13.12 Tops

Tops modules are used to convert external data sources into top file data for the state system.

36.13.13 Wheel

The wheel system is used to manage master side management routines. These routines are primarily intended for the API to enable master configuration.

36.14 Package Providers

This page contains guidelines for writing package providers.

36.14.1 Package Functions

One of the most important features of Salt is package management. There is no shortage of package managers, so in the interest of providing a consistent experience in pkg states, there are certain functions that should be present in a package provider. Note that these are subject to change as new features are added or existing features are enhanced.

list_pkgs

This function should declare an empty dict, and then add packages to it by calling pkg_resource.add_pkg, like so:

```python
__salt__['pkg_resource.add_pkg'](ret, name, version)
```

The last thing that should be done before returning is to execute pkg_resource.sort_pkglist. This function does not presently do anything to the return dict, but will be used in future versions of Salt.

```python
__salt__['pkg_resource.sort_pkglist'](ret)
```

list_pkgs returns a dictionary of installed packages, with the keys being the package names and the values being the version installed. Example return data:

```json
{'foo': '1.2.3-4',
 'bar': '5.6.7-8'}
```
latest_version

Accepts an arbitrary number of arguments. Each argument is a package name. The return value for a package will be an empty string if the package is not found or if the package is up-to-date. The only case in which a non-empty string is returned is if the package is available for new installation (i.e. not already installed) or if there is an upgrade available.

If only one argument was passed, this function return a string, otherwise a dict of name/version pairs is returned.

This function must also accept **kwargs, in order to receive the fromrepo and repo keyword arguments from pkg states. Where supported, these arguments should be used to find the install/upgrade candidate in the specified repository. The fromrepo kwarg takes precedence over repo, so if both of those kwargs are present, the repository specified in fromrepo should be used. However, if repo is used instead of fromrepo, it should still work, to preserve backwards compatibility with older versions of Salt.

version

Like latest_version, accepts an arbitrary number of arguments and returns a string if a single package name was passed, or a dict of name/value pairs if more than one was passed. The only difference is that the return values are the currently-installed versions of whatever packages are passed. If the package is not installed, an empty string is returned for that package.

upgrade_available

Deprecated and destined to be removed. For now, should just do the following:

```
return __salt__['pkg.latest_version'](name) != ''
```

install

The following arguments are required and should default to None:

1. name (for single-package pkg states)
2. pkgs (for multiple-package pkg states)
3. sources (for binary package file installation)

The first thing that this function should do is call `pkg_resource.parse_targets` (see below). This function will convert the SLS input into a more easily parsed data structure. `pkg_resource.parse_targets` may need to be modified to support your new package provider, as it does things like parsing package metadata which cannot be done for every package management system.

```
pkg_params, pkg_type = __salt__['pkg_resource.parse_targets'](name, pkgs, sources)
```

Two values will be returned to the install function. The first of them will be a dictionary. The keys of this dictionary will be package names, though the values will differ depending on what kind of installation is being done:

- If name was provided (and pkgs was not), then there will be a single key in the dictionary, and its value will be None. Once the data has been returned, if the version keyword argument was provided, then it should replace the None value in the dictionary.
• If `pkgs` was provided, then `name` is ignored, and the dictionary will contain one entry for each package in the `pkgs` list. The values in the dictionary will be `None` if a version was not specified for the package, and the desired version if specified. See the Multiple Package Installation Options section of the `pkg.installed` state for more info.

• If `sources` was provided, then `name` is ignored, and the dictionary values will be the path/URI for the package. The second return value will be a string with two possible values: repository or file. The `install` function can use this value (if necessary) to build the proper command to install the targeted package(s).

Both before and after the installing the target(s), you should run `list_pkgs` to obtain a list of the installed packages. You should then return the output of `salt.utils.compare_dicts()`

```
return salt.utils.compare_dicts(old, new)
```

### remove

Removes the passed package and return a list of the packages removed.

### 36.14.2 Package Repo Functions

There are some functions provided by `pkg` which are specific to package repositories, and not to packages themselves. When writing modules for new package managers, these functions should be made available as stated below, in order to provide compatibility with the `pkgrepo` state.

All repo functions should accept a `basedir` option, which defines which directory repository configuration should be found in. The default for this is dictated by the repo manager that is being used, and rarely needs to be changed.

```
basedir = '/etc/yum.repos.d'
__salt__['pkg.list_repos'](basedir)
```

### list_repos

Lists the repositories that are currently configured on this system.

```
__salt__['pkg.list_repos']()
```

Returns a dictionary, in the following format:

```
{'reponame': 'config_key_1': 'config value 1',
 'config_key_2': 'config value 2',
 'config_key_3': ['list item 1 (when appropriate)',
                 'list item 2 (when appropriate)']}
```

### get_repo

Displays all local configuration for a specific repository.

```
__salt__['pkg.get_repo']('repo=myrepo')
```

The information is formatted in much the same way as `list_repos`, but is specific to only one repo.
Salt Documentation, Release 2015.8.12

```json
{'config_key_1': 'config value 1',
'config_key_2': 'config value 2',
'config_key_3': ['list item 1 (when appropriate)',
'Iist item 2 (when appropriate)']}
```

del_repo

Removes the local configuration for a specific repository. Requires a repo argument, which must match the locally configured name. This function returns a string, which informs the user as to whether or not the operation was a success.

```python
__salt__['pkg.del_repo'](repo='myrepo')
```

mod_repo

Modify the local configuration for one or more option for a configured repo. This is also the way to create new repository configuration on the local system; if a repo is specified which does not yet exist, it will be created.

The options specified for this function are specific to the system; please refer to the documentation for your specific repo manager for specifics.

```python
__salt__['pkg.mod_repo'](repo='myrepo', url='http://myurl.com/repo')
```

36.14.3 Low-Package Functions

In general, the standard package functions as describes above will meet your needs. These functions use the system’s native repo manager (for instance, yum or the apt tools). In most cases, the repo manager is actually separate from the package manager. For instance, yum is usually a front-end for rpm, and apt is usually a front-end for dpkg. When possible, the package functions that use those package managers directly should do so through the low package functions.

It is normal and sane for pkg to make calls to lowpkgs, but lowpkg must never make calls to pkg. This affects functions which are required by both pkg and lowpkg, but the technique in pkg is more performant than what is available to lowpkg. When this is the case, the lowpkg function that requires that technique must still use the lowpkg version.

list_pkgs

Returns a dict of packages installed, including the package name and version. Can accept a list of packages; if none are specified, then all installed packages will be listed.

```python
installed = __salt__['lowpkg.list_pkgs']('foo', 'bar')
```

Example output:

```
{'foo': '1.2.3-4',
'bar': '5.6.7-8'}
```
verify

Many (but not all) package management systems provide a way to verify that the files installed by the package manager have or have not changed. This function accepts a list of packages; if none are specified, all packages will be included.

```python
installed = __salt__['lowpkg.verify']('httpd')
```

Example output:

```python
{'/etc/httpd/conf/httpd.conf': {'mismatch': ['size', 'md5sum', 'mtime'], 'type': 'config'}}
```

file_list

Lists all of the files installed by all packages specified. If not packages are specified, then all files for all known packages are returned.

```python
installed = __salt__['lowpkg.file_list']('httpd', 'apache')
```

This function does not return which files belong to which packages; all files are returned as one giant list (hence the file_list function name. However, This information is still returned inside of a dict, so that it can provide any errors to the user in a sane manner.

```python
{'errors': ['package apache is not installed'], 'files': ['/etc/httpd', '/etc/httpd/conf', '/etc/httpd/conf.d', '...SNIP...']}
```

file_dict

Lists all of the files installed by all packages specified. If not packages are specified, then all files for all known packages are returned.

```python
installed = __salt__['lowpkg.file_dict']('httpd', 'apache', 'kernel')
```

Unlike file_list, this function will break down which files belong to which packages. It will also return errors in the same manner as file_list.

```python
{'errors': ['package apache is not installed'], 'packages': {'httpd': ['/etc/httpd', '/etc/httpd/conf', '...SNIP...'], 'kernel': ['/boot/vmlinuz-2.6.32-279.el6.x86_64.hmac', '/boot/System.map-2.6.32-279.el6.x86_64', '...SNIP...']}}
```

36.15 Reporting Bugs

Salt uses GitHub to track open issues and feature requests.
To file a bug, please navigate to the new issue page for the Salt project.

In an issue report, please include the following information:

- The output of `salt --versions-report` from the relevant machines. This can also be gathered remotely by using `salt <my_tgt> test.versions_report`.
- A description of the problem including steps taken to cause the issue to occur and the expected behaviour.
- Any steps taken to attempt to remediate the problem.
- Any configuration options set in a configuration file that may be relevant.
- A reproduceable test case. This may be as simple as an SLS file that illustrates a problem or it may be a link to a repository that contains a number of SLS files that can be used together to re-produce a problem. If the problem is transitory, any information that can be used to try and reproduce the problem is helpful.
- [Optional] The output of each salt component (master/minion/CLI) running with the `-l debug` flag set.

**Note:** Please be certain to scrub any logs or SLS files for sensitive data!

### 36.16 Salt Topology

Salt is based on a powerful, asynchronous, network topology using ZeroMQ. Many ZeroMQ systems are in place to enable communication. The central idea is to have the fastest communication possible.

#### 36.16.1 Servers

The Salt Master runs 2 network services. First is the ZeroMQ PUB system. This service by default runs on port 4505 and can be configured via the `publish_port` option in the master configuration.

Second is the ZeroMQ REP system. This is a separate interface used for all bi-directional communication with minions. By default this system binds to port 4506 and can be configured via the `ret_port` option in the master.

#### 36.16.2 PUB/SUB

The commands sent out via the salt client are broadcast out to the minions via ZeroMQ PUB/SUB. This is done by allowing the minions to maintain a connection back to the Salt Master and then all connections are informed to download the command data at once. The command data is kept extremely small (usually less than 1K) so it is not a burden on the network.

#### 36.16.3 Return

The PUB/SUB system is a one way communication, so once a publish is sent out the PUB interface on the master has no further communication with the minion. The minion, after running the command, then sends the command’s return data back to the master via the `ret_port`. 

---

2224 Chapter 36. Developing Salt
36.17 Translating Documentation

If you wish to help translate the Salt documentation to your language, please head over to the Transifex website and sign up for an account.

Once registered, head over to the Salt Translation Project, and either click on Request Language if you can't find yours, or, select the language for which you wish to contribute and click Join Team.

Transifex provides some useful reading resources on their support domain, namely, some useful articles directed to translators.

36.17.1 Building A Localized Version of the Documentation

While you're working on your translation on Transifex, you might want to have a look at how it's rendering.

Install The Transifex Client

To interact with the Transifex web service you will need to install the transifex-client:

```
pip install transifex-client
```

Configure The Transifex Client

Once installed, you will need to set it up on your computer. We created a script to help you with that:

```
scripts/setup-transifex-config
```

Download Remote Translations

There's a little script which simplifies the download process of the translations(which isn't that complicated in the first place). So, let's assume you're translating pt_PT, Portuguese(Portugal). To download the translations, execute from the doc/ directory of your Salt checkout:

```
make download-translations SPHINXLANG=pt_PT
```

To download pt_PT, Portuguese(Portugal), and nl, Dutch, you can use the helper script directly:

```
scripts/download-translation-catalog pt_PT nl
```

Build Localized Documentation

After the download process finishes, which might take a while, the next step is to build a localized version of the documentation. Following the pt_PT example above:

```
make html SPHINXLANG=pt_PT
```

View Localized Documentation

Open your browser, point it to the local documentation path and check the localized output you've just build.
### 36.18 Developing Salt Tutorial

This tutorial assumes you have: * a web browser * a GitHub account (<my_account>) * a command line (CLI) * git * a text editor

#### 36.18.1 Fork

In your browser, navigate to the saltstack/salt GitHub repository.

Click on **Fork** ([https://github.com/saltstack/salt/#fork-destination-box](https://github.com/saltstack/salt/#fork-destination-box)).

**Note:** If you have more than one GitHub presence, for example if you are a member of a team, GitHub will ask you into which area to clone Salt. If you don't know where, then select your personal GitHub account.

#### 36.18.2 Clone

In your CLI, navigate to the directory into which you want clone the Salt codebase and submit the following command:

```
$ git clone https://github.com/<my_account>/salt.git
```

where `<my_account>` is the name of your GitHub account. After the clone has completed, add SaltStack as a second remote and fetch any changes from `upstream`.

```
$ cd salt
$ git remote add upstream https://github.com/saltstack/salt.git
$ git fetch upstream
```

For this tutorial, we will be working off from the **develop** branch, which is the default branch for the SaltStack GitHub project. This branch needs to track `upstream/develop` so that we will get all upstream changes when they happen.

```
$ git checkout develop
$ git branch --set-upstream-to upstream/develop
```

#### 36.18.3 Fetch

Fetch any upstream changes on the **develop** branch and sync them to your local copy of the branch with a single command:

```
$ git pull --rebase
```

**Note:** For an explanation on `pull vs pull --rebase` and other excellent points, see [this article](https://example.com) by Mislav Marohnić.
36.18.4 Branch

Now we are ready to get to work. Consult the sprint beginner bug list and select an execution module whose __virtual__ function needs to be updated. I'll select the alternatives module.

Create a new branch off from develop. Be sure to name it something short and descriptive.

```
$ git checkout -b virt_ret
```

36.18.5 Edit

Edit the file you have selected, and verify that the changes are correct.

```
$ vim salt/modules/alternatives.py
$ git diff
```

```
diff --git a/salt/modules/alternatives.py b/salt/modules/alternatives.py
index 1653e5f..30c0a59 100644
--- a/salt/modules/alternatives.py
+++ b/salt/modules/alternatives.py
@@ -30,7 +30,7 @@ def __virtual__():
    if os.path.isdir('/etc/alternatives'):
        return True
-    return False
+    return (False, 'Cannot load alternatives module: /etc/alternatives dir not found')

def _get_cmd():
```

36.18.6 Commit

Stage and commit the changes. Write a descriptive commit summary, but try to keep it less than 50 characters. Review your commit.

```
$ git add salt/modules/alternatives.py
$ git commit -m 'modules.alternatives: __virtual__ return err msg'
$ git show
```

Note: If you need more room to describe the changes in your commit, run `git commit` (without the `-m`, message, option) and you will be presented with an editor. The first line is the commit summary and should still be 50 characters or less. The following paragraphs you create are free form and will be preserved as part of the commit.

36.18.7 Push

Push your branch to your GitHub account. You will likely need to enter your GitHub username and password.

```
$ git push origin virt_ret
Username for 'https://github.com': <my_account>
Password for 'https://<my_account>@github.com':
```
Note: If authentication over https does not work, you can alternatively setup ssh keys. Once you have done this, you may need add the keys to your git repository configuration

```bash
$ git config ssh.key ~/.ssh/<key_name>
```

where `<key_name>` is the file name of the private key you created.

### 36.18.8 Merge

In your browser, navigate to the new pull request page on the saltstack/salt GitHub repository and click on compare across forks. Select `<my_account>` from the list of head forks and the branch you are wanting to merge into develop (virt_ret in this case).

When you have finished reviewing the changes, click Create pull request.

If your pull request contains only a single commit, the title and comment will be taken from that commit's summary and message, otherwise the branch name is used for the title. Edit these fields as necessary and click Create pull request.

Note: Although these instructions seem to be the official pull request procedure on github's website, here are two alternative methods that are simpler.

- If you navigate to your clone of salt, https://github.com/<my_account>/salt, depending on how old your branch is or how recently you pushed updates on it, you may be presented with a button to create a pull request with your branch.
- I find it easiest to edit the following URL:

  https://github.com/saltstack/salt/compare/develop...<my_account>:virt_ret

### 36.18.9 Resources

GitHub offers many great tutorials on various aspects of the git- and GitHub-centric development workflow:

https://help.github.com/

There are many topics covered by the Salt Developer documentation:

https://docs.saltstack.com/en/latest/topics/development/index.html

The contributing documentation presents more details on specific contributing topics:

https://docs.saltstack.com/en/latest/topics/development/contributing.html

### 36.19 Salt’s Test Suite

Salt comes with a powerful integration and unit test suite allowing for the fully automated run of integration and/or unit tests from a single interface.

To learn the basics of how Salt’s test suite works, be sure to check out the *Salt’s Test Suite: An Introduction* tutorial.
36.19.1 Test Directory Structure

Salt’s test suite is located in the **tests** directory in the root of Salt’s codebase. The test suite is divided into two main groups:

- Integration Tests
- Unit Tests

Within each of these groups, the directory structure roughly mirrors the structure of Salt’s own codebase. Notice that there are directories for states, modules, runners, output, and more in each testing group.

The files that are housed in the `modules` directory of either the unit or the integration testing factions contain respective integration or unit test files for Salt execution modules.

**Integration Tests**

The Integration section of Salt’s test suite start up a number of Salt daemons to test functionality in a live environment. These daemons include two Salt Masters, one Syndic, and two Minions. This allows the Syndic interface to be tested and Master/Minion communication to be verified. All of the integration tests are executed as live Salt commands sent through the started daemons.

Integration tests are particularly good at testing modules, states, and shell commands, among other segments of Salt’s ecosystem. By utilizing the integration test daemons, integration tests are easy to write. They are also SaltStack’s generally preferred method of adding new tests.

The discussion in the **Integration vs. Unit** section of the testing tutorial is beneficial in learning why you might want to write integration tests vs. unit tests. Both testing arenas add value to Salt’s test suite and you should consider adding both types of tests if possible and appropriate when contributing to Salt.

- Integration Test Documentation

**Unit Tests**

Unit tests do not spin up any Salt daemons, but instead find their value in testing singular implementations of individual functions. Instead of testing against specific interactions, unit tests should be used to test a function’s logic as well as any return or raises statements. Unit tests also rely heavily on mocking external resources.

The discussion in the **Integration vs. Unit** section of the testing tutorial is useful in determining when you should consider writing unit tests instead of, or in addition to, integration tests when contributing to Salt.

- Unit Test Documentation

36.19.2 Running The Tests

There are requirements, in addition to Salt’s requirements, which need to be installed in order to run the test suite. Install one of the lines below, depending on the relevant Python version:

```
$ pip install -r requirements/dev_python26.txt
$ pip install -r requirements/dev_python27.txt
```

**Note:** In Salt 0.17, testing libraries were migrated into their own repo. To install them:

```
$ pip install git+https://github.com/saltstack/salt-testing.git#egg=SaltTesting
```
Failure to install SaltTesting will result in import errors similar to the following:

```
ImportError: No module named salttesting
```

Once all requirements are installed, use `tests/runtests.py` to run all of the tests included in Salt’s test suite:

```
python tests/runtests.py
```

For more information about options you can pass the test runner, see the `--help` option:

```
python tests/runtests.py --help
```

An alternative way of invoking the test suite is available in `setup.py`:

```
./setup.py test
```

**Running Test Subsections**

Instead of running the entire test suite all at once, which can take a long time, there are several ways to run only specific groups of tests or individual tests:

- Run unit tests only: `./tests/runtests.py --unit-tests`
- Run unit and integration tests for states: `./tests/runtests.py --state`
- Run integration tests for an individual module: `./tests/runtests.py -n integration.modules.virt`
- Run unit tests for an individual module: `./tests/runtests.py -n unit.modules.virt_test`
- Run an individual test by using the class and test name (this example is for the `test_default_kvm_profile` test in the integration.module.virt): `./tests/runtests.py -n integration.module.virt.VirtTest.test_default_kvm_profile`

For more specific examples of how to run various test subsections or individual tests, please see the *Test Selection Options* documentation or the *Running Specific Tests* section of the *Salt’s Test Suite: An Introduction* tutorial.

**Running Unit Tests Without Integration Test Daemons**

Since the unit tests do not require a master or minion to execute, it is often useful to be able to run unit tests individually, or as a whole group, without having to start up the integration testing daemons. Starting up the master, minion, and syndic daemons takes a lot of time before the tests can even start running and is unnecessary to run unit tests. To run unit tests without invoking the integration test daemons, simple remove the `/tests` portion of the `runtests.py` command:

```
./runtests.py --unit
```

All of the other options to run individual tests, entire classes of tests, or entire test modules still apply.

**Running Destructive Integration Tests**

Salt is used to change the settings and behavior of systems. In order to effectively test Salt’s functionality, some integration tests are written to make actual changes to the underlying system. These tests are referred to as ‘`de-"
Some examples of destructive tests are changes to the addition of a user or installing packages. By default, destructive tests are disabled and will be skipped.

Generally, destructive tests should clean up after themselves by attempting to restore the system to its original state. For example, if a new user is created during a test, the user should be deleted after the related test(s) have completed. However, no guarantees are made that test clean-up will complete successfully. Therefore, running destructive tests should be done with caution.

---

**Note:** Running destructive tests will change the underlying system. Use caution when running destructive tests.

To run tests marked as destructive, set the `--run-destructive` flag:

```
./tests/runtests.py --run-destructive
```

---

### Running Cloud Provider Tests

Salt's testing suite also includes integration tests to assess the successful creation and deletion of cloud instances using Salt-Cloud for providers supported by Salt-Cloud.

The cloud provider tests are off by default and run on sample configuration files provided in `tests/integration/files/conf/cloud.providers.d/`. In order to run the cloud provider tests, valid credentials, which differ per provider, must be supplied. Each credential item that must be supplied is indicated by an empty string value and should be edited by the user before running the tests. For example, DigitalOcean requires a client key and an api key to operate. Therefore, the default cloud provider configuration file for DigitalOcean looks like this:

```
digitalocean-config:
    driver: digital_ocean
    client_key: ''
    api_key: ''
    location: New York 1
```

As indicated by the empty string values, the `client_key` and the `api_key` must be provided:

```
digitalocean-config:
    driver: digital_ocean
    client_key: wFGEwgregeqw3435gDger
    api_key: GDE43t43REGTrkilg43934t34qT43t4dgegerGEGg
    location: New York 1
```

**Note:** When providing credential information in cloud provider configuration files, do not include the single quotes.

Once all of the valid credentials for the cloud provider have been supplied, the cloud provider tests can be run by setting the `--cloud-provider-tests` flag:

```
./tests/runtests.py --cloud-provider-tests
```

---

### Running The Tests In A Docker Container

The test suite can be executed under a docker container using the `--docked` option flag. The docker container must be properly configured on the system invoking the tests and the container must have access to the internet.
Here's a simple usage example:

```
tests/runtests.py --docked=ubuntu-12.04 -v
```

The full `docker` container repository can also be provided:

```
tests/runtests.py --docked=salttest/ubuntu-12.04 -v
```

The SaltStack team is creating some containers which will have the necessary dependencies pre-installed. Running the test suite on a container allows destructive tests to run without making changes to the main system. It also enables the test suite to run under a different distribution than the one the main system is currently using.

The current list of test suite images is on Salt's `docker` repository.

Custom `docker` containers can be provided by submitting a pull request against Salt's `docker` Salt test containers repository.

### 36.19.3 Automated Test Runs

SaltStack maintains a Jenkins server to allow for the execution of tests across supported platforms. The tests executed from Salt's Jenkins server create fresh virtual machines for each test run, then execute destructive tests on the new, clean virtual machine.

SaltStack's Jenkins server continuously runs the entire test suite, including destructive tests, on an array of various supported operating systems throughout the day. Each actively supported branch of Salt's repository runs the tests located in the respective branch's code. Each set of branch tests also includes a pylint run. These branch tests help ensure the viability of Salt code at any given point in time as pull requests are merged into branches throughout the day.

In addition to branch tests, SaltStack's Jenkins server also runs tests on pull requests. These pull request tests include a smaller set of virtual machines that run on the branch tests. The pull request tests, like the branch tests, include a pylint test as well.

When a pull request is submitted to Salt's repository on GitHub, the suite of pull request tests are started by Jenkins. These tests are used to gauge the pull request's viability to merge into Salt's codebase. If these initial tests pass, the pull request can then merged into the Salt branch by one of Salt's core developers, pending their discretion. If the initial tests fail, core developers may request changes to the pull request. If the failure is unrelated to the changes in question, core developers may merge the pull request despite the initial failure.

As soon as the pull request is merged, the changes will be added to the next branch test run on Jenkins.

For a full list of currently running test environments, go to [http://jenkins.saltstack.com](http://jenkins.saltstack.com).

### Using Salt-Cloud on Jenkins

For testing Salt on Jenkins, SaltStack uses `Salt-Cloud` to spin up virtual machines. The script using Salt-Cloud to accomplish this is open source and can be found here: [https://github.com/saltstack/salt/blob/develop/tests/jenkins.py](https://github.com/saltstack/salt/blob/develop/tests/jenkins.py)

### 36.19.4 Writing Tests

The salt testing infrastructure is divided into two classes of tests, integration tests and unit tests. These terms may be defined differently in other contexts, but for Salt they are defined this way:

- **Unit Test**: Tests which validate isolated code blocks and do not require external interfaces such as `salt-call` or any of the salt daemons.
- **Integration Test**: Tests which validate externally accessible features.

Salt testing uses unittest2 from the python standard library and MagicMock.

- Writing integration tests
- Writing unit tests

**Naming Conventions**

Any function in either integration test files or unit test files that is doing the actual testing, such as functions containing assertions, must start with `test_`:

```python
def test_user_present(self):
```

When functions in test files are not prepended with `test_`, the function acts as a normal, helper function and is not run as a test by the test suite.

**Submitting New Tests**

Which branch of the Salt codebase should new tests be written against? The location of where new tests should be submitted depends largely on the reason you’re writing the tests.

**Tests for New Features**

If you are adding new functionality to Salt, please write the tests for this new feature in the same pull request as the new feature. New features should always be submitted to the `develop` branch.

If you have already submitted the new feature, but did not write tests in the original pull request that has already been merged, please feel free to submit a new pull request containing tests. If the feature was recently added to Salt’s `develop` branch, then the tests should be added there as well. However, if the feature was added to `develop` some time ago and is already present in one or more release branches, please refer to the *Tests for Entire Files or Functions* section below for more details about where to submit tests for functions or files that do not already have tests.

**Tests to Accompany a Bugfix**

If you are writing tests for code that fixes a bug in Salt, please write the test in the same pull request as the bugfix. If you’re unsure of where to submit your bugfix and accompanying test, please review the *Which Salt Branch?* documentation in Salt’s Contributing guide.

**Tests for Entire Files or Functions**

Sometimes entire files in Salt are completely untested. If you are writing tests for a file that doesn’t have any tests written for it, write your test against the earliest supported release branch that contains the file or function you’re testing.

Once your tests are submitted in a pull request and is merged into the branch in question, the tests you wrote will be merged-forward by SaltStack core engineers and the new tests will propagate to the newer release branches. That way the tests you wrote will apply to all current and relevant release branches, and not just the `develop` branch, for example. This methodology will help protect against regressions on older files in Salt’s codebase.
There may be times when the tests you write against an older branch fail in the merge-forward process because functionality has changed in newer release branches. In these cases, a Salt core developer may reach out to you for advice on the tests in question if the path forward is unclear.

Note: If tests are written against a file in an older release branch and then merged forward, there may be new functionality in the file that is present in the new release branch that is untested. It would be wise to see if new functionality could use additional testing once the test file has propagated to newer release branches.

### 36.20 raet

# RAET # Reliable Asynchronous Event Transport Protocol

See also:

RAET Overview

### 36.20.1 Protocol

Layering:

OSI Layers

Link is hidden from Raet Network is IP host address and Udp Port Transport is Raet transactions, service kind, tail error checking, Could include header signing as part of transport reliable delivery serialization of header Session is session id key exchange for signing. Grouping is Road (like 852 channel) Presentation is Encrypt Decrypt body Serialize Deserialize Body Application is body data dictionary

Header signing spans both the Transport and Session layers.

### 36.20.2 Header

JSON Header (Tradeoff some processing speed for extensibility, ease of use, readability)

Body initially JSON but support for ```packed``` binary body

### 36.20.3 Packet

Header ASCII Safe JSON Header termination: Empty line given by double pair of carriage return linefeed /t/n/t/n 10 13 10 13 ADAD 1010 1101 1010 1101

In json carriage return and newline characters cannot appear in a json encoded string unless they are escaped with backslash, so the 4 byte combination is illegal in valid json that does not have multi-byte unicode characters.

These means the header must be ascii safe so no multihbyte utf-8 strings allowed in header.
Following Header Terminator is variable length signature block. This is binary and the length is provided in the header.

Following the signature block is the packet body or data. This may either be JSON or packed binary. The format is given in the json header

Finally is an optional tail block for error checking or encryption details

### 36.20.4 Header Fields

In UDP header

- sh = source host
- sp = source port
- dh = destination host
- dp = destination port

In RAET Header

- hk = header kind
- hl = header length
- vn = version number
- sd = Source Device ID
- dd = Destination Device ID
- cf = Corresponder Flag
- mf = Multicast Flag
- si = Session ID
- ti = Transaction ID
- sk = Service Kind
- pk = Packet Kind
- bf = Burst Flag
- oi = Order Index
- dt = Date Time Stamp
- sn = Segment Number
- sc = Segment Count
- pf = Pending Segment Flag
- af = All Flag
- nk = Auth header kind
- nl = Auth header length
- bk = body kind
- bl = body length
- tk = tail kind
- tl = tail length

**fg = flags packed (Flags) Default `00` hex string** 2 byte Hex string with bits (0, 0, af, pf, 0, bf, mf, cf) Zeros are TBD flags

### 36.20.5 Session Bootstrap

Minion sends packet with SID of Zero with public key of minions Public Private Key pair Master acks packet with SID of Zero to let minion know it received the request

Some time later Master sends packet with SID of zero that accepts the Minion

Minion

### 36.20.6 Session

Session is important for security. Want one session opened and then multiple transactions within session.

- Session ID SID sid

- GUID hash to guarantee uniqueness since no guarantee of nonvolatile storage or require file storage to keep last session ID used.
36.20.7 Service Types or Modular Services

Four Service Types

1. **One or more maybe** (unacknowledged repeat) maybe means no guarantee
2. **Exactly one at most** (ack with retries) (duplicate detection idempotent) at most means fixed number of retries has finite probability of failing B1) finite retries B2) infinite retries with exponential back-off up to a maximum delay
3. **Exactly one of sequence at most** (sequence numbered) Receiver requests retry of missing packet with same B1 or B2 retry type
4. **End to End (Application layer Request Response)** This is two B sub transactions

Initially unicast messaging Eventually support for Multicast

The use case for C) is to fragment large packets as once a UDP packet exceeds the frame size its reliability goes way down So its more reliable to fragment large packets.

Better approach might be to have more modularity. Services Levels

1. **Maybe one or more**
   (a) **Fire and forget** no transaction either side
   (b) **Repeat, no ack, no dupdet** repeat counter send side, no transaction on receive side
   (c) **Repeat, no Ack, dupdet** repeat counter send side, dup detection transaction receive side
2. **More or Less Once**
   (a) **retry finite, ack no dupdet** retry timer send side, finite number of retries ack receive side no dupdet
3. **At most Once**
   (a) **retry finite, ack, dupdet** retry timer send side, finite number of retries ack receive side dupdet
4. **Exactly once**
   (a) **ack retry** retry timer send side, ack and duplicate detection receive side Infinite retries with exponential backoff
5. **Sequential sequence number**
   (a) reorder escrow
   (b) Segmented packets
6. request response to application layer

Service Features

1. repeats
2. ack retry transaction id
3. sequence number duplicate detection out of order detection sequencing
4. rep-req

Always include transaction id since multiple transactions on same port So get duplicate detection for free if keep transaction alive but if use

A) Maybe one or more B1) At Least One B2) Exactly One C) One of sequence D) End to End

A) Sender creates transaction id for number of repeats but receiver does not keep transaction alive
B1) Sender creates transaction id keeps it for retries. Receiver keeps it to send ack then kills so retry could be duplicate not detected
B2) Sender creates transaction id keeps for retries Receiver keeps tid for acks on any retry so no duplicates.
C) Sender creates TID and Sequence Number. Receiver checks for out of order sequence and can request retry.
D) Application layer sends response. So question is do we keep transaction open or have response be new transaction. No because then we need a rep-req ID so might as well use the same transaction id. Just keep alive until get response.

Little advantage to B1 vs B2 not having duplicates.

So 4 service types
1. Maybe one or more (unacknowledged repeat)
2. Exactly One (At most one) (ack with retry) (duplicate detection idempotent)
3. One of Sequence (sequence numbered)
4. End to End

Also multicast or unicast

Modular Transaction Table

Sender Side: Transaction ID plus transaction source sender or receiver generated transaction id Repeat Counter
Retry Timer Retry Counter (finite retries) Redo Timer (infinite redos with exponential backoff) Sequence number without acks (look for resend requests) Sequence with ack (wait for ack before sending next in sequence) Segmentation

Receiver Side: Nothing just accept packet Acknowledge (can delete transaction after acknowledge) No duplicate detection Transaction timeout (keep transaction until timeout) Duplicate detection save transaction id duplicate detection timeout Request resend of missing packet in sequence Sequence reordering with escrow timeout wait escrow before requesting resend Unsegmentation (request resends of missing segment)

36.21 SaltStack Git Policy

The SaltStack team follows a git policy to maintain stability and consistency with the repository.

The git policy has been developed to encourage contributions and make contributing to Salt as easy as possible. Code contributors to SaltStack projects DO NOT NEED TO READ THIS DOCUMENT, because all contributions come into SaltStack via a single gateway to make it as easy as possible for contributors to give us code.

The primary rule of git management in SaltStack is to make life easy on contributors and developers to send in code. Simplicity is always a goal!

36.21.1 New Code Entry

All new SaltStack code should be submitted against either the develop branch or a point release branch, depending on the nature of the submission. Please see the Which Salt Branch? section of Salt's Contributing documentation or the Release Branching section section below for more information.

36.21.2 Release Branching

SaltStack maintains two types of releases, Feature Releases and Point Releases (also commonly referred to as Bugfix Releases. A feature release is managed by incrementing the first or second release point number, so 2015.5.5 -> 2015.8.0 signifies a feature release and 2015.8.0 -> 2015.8.1 signifies a point release.
Feature Release Branching

Each feature release is maintained in a dedicated git branch derived from the last applicable release commit on develop. All file changes relevant to the feature release will be completed in the develop branch prior to the creation of the feature release branch. The feature release branch will be named after the relevant numbers to the feature release, which constitute the first two numbers. This means that the release branch for the 2015.8.0 series is named 2015.8.

A feature release branch is created with the following command:

```
# git checkout -b 2015.8 # From the develop branch
# git push origin 2015.8
```

Point Releases

Each point release is derived from its parent release branch. Constructing point releases is a critical aspect of Salt development and is managed by members of the core development team. Point releases comprise bug and security fixes. Bug fixes can be made against a point release branch in one of two ways: the bug fix can be submitted directly against the point release branch, or an attempt can be made to back-port the fix to the point release branch.

Bug fixes should be made against the earliest supported release branch on which the bug is present. The Salt development team regularly merges older point release branches forward into newer point release branches. That way, the bug fixes that are submitted to older release branches can cascade up through all related release branches.

For more information, please see the Which Salt Branch? section of Salt’s Contributing documentation.

Determining when a point release is going to be made is up to the project leader (Thomas Hatch). Generally point releases are made every 2-4 weeks or if there is a security fix they can be made sooner.

The point release is only designated by tagging the commit on the release branch with a release number using the existing convention (version 2015.8.1 is tagged with v2015.8.1). From the tag point a new source tarball is generated and published to PyPI, and a release announcement is made.

36.22 Salt Conventions

36.22.1 Writing Salt Documentation

Salt’s documentation is built using the Sphinx documentation system. It can be built in a large variety of output formats including HTML, PDF, ePub, and manpage.

All the documentation is contained in the main Salt repository. Speaking broadly, most of the narrative documentation is contained within the https://github.com/saltstack/salt/blob/develop/doc subdirectory and most of the reference and API documentation is written inline with Salt’s Python code and extracted using a Sphinx extension.

Style

The Salt project recommends the IEEE style guide as a general reference for writing guidelines. Those guidelines are not strictly enforced but rather serve as an excellent resource for technical writing questions. The NCBI style guide is another very approachable resource.
Point-of-view

Use third-person perspective and avoid ``I'', ``we'', ``you'' forms of address. Identify the addressee specifically e.g., ``users should'', ``the compiler does'', etc.

Active voice

Use active voice and present-tense. Avoid filler words.

Title capitalization

Document titles and section titles within a page should follow normal sentence capitalization rules. Words that are capitalized as part of a regular sentence should be capitalized in a title and otherwise left as lowercase. Punctuation can be omitted unless it aids the intent of the title (e.g., exclamation points or question marks).

For example:

```
This is a main heading

Paragraph.

This is an exciting sub-heading!

Paragraph.
```

Serial Commas

According to Wikipedia: In English punctuation, a serial comma or series comma (also called Oxford comma and Harvard comma) is a comma placed immediately before the coordinating conjunction (usually ``and'', ``or'', or ``nor'') in a series of three or more terms. For example, a list of three countries might be punctuated either as ``France, Italy, and Spain'' (with the serial comma), or as ``France, Italy and Spain'' (without the serial comma).''

When writing a list that includes three or more items, the serial comma should always be used.

Documenting modules

Documentation for Salt's various module types is inline in the code. During the documentation build process it is extracted and formatted into the final HTML, PDF, etc format.

Inline documentation

Python has special multi-line strings called docstrings as the first element in a function or class. These strings allow documentation to live alongside the code and can contain special formatting. For example:

```
def my_function(value):
    
    Upper-case the given value

    Usage:
```
Specify a release for additions or changes

New functions or changes to existing functions should include a marker that denotes what Salt release will be affected. For example:

```python
def my_function(value):
    """
    Upper-case the given value
    .. versionadded:: 2014.7.0
    
    return value.upper()
    """
```

For changes to a function:

```python
def my_function(value, strip=False):
    """
    Upper-case the given value
    .. versionchanged:: Boron
        Added a flag to also strip whitespace from the string.
    
    if strip:
        return value.upper().strip()
    return value.upper()
    """
```

Adding module documentation to the index

Each module type has an index listing all modules of that type. For example: all-salt.modules, Full list of builtin state modules, Full list of builtin renderer modules. New modules must be added to the index manually.

1. Edit the file for the module type: execution modules, state modules, renderer modules, etc.
2. Add the new module to the alphabetized list.
3. Build the documentation which will generate an .rst file for the new module in the same directory as the index.rst.
4. Commit the changes to index.rst and the new .rst file and send a pull request.
Cross-references

The Sphinx documentation system contains a wide variety of cross-referencing capabilities.

Glossary entries

Link to glossary entries using the term role. A cross-reference should be added the first time a Salt-specific term is used in a document.

A common way to encapsulate master-side functionality is by writing a custom :term:`Runner Function`. Custom Runner Functions are easy to write.

Index entries

Sphinx automatically generates many kinds of index entries, but it is occasionally useful to manually add items to the index.

One method is to use the index directive above the document or section that should appear in the index.

.. index:: ! Event, event bus, event system
   see: Reactor; Event

Another method is to use the index role inline with the text that should appear in the index. The index entry is created and the target text is left otherwise intact.

Information about the :index:`Salt Reactor`

Paragraph.

Documents and sections

Each document should contain a unique top-level label of the form:

.. _my-page:

My page

Paragraph.

Unique labels can be linked using the ref role. This allows cross-references to survive document renames or movement.

For more information see :ref:`my-page`.

Note, the :doc: role should not be used to link documents together.

Modules

Cross-references to Salt modules can be added using Sphinx's Python domain roles. For example, to create a link to the test.ping function:
A useful execution module to test active communication with a minion is the `test.ping <salt.modules.test.ping>` function.

Salt modules can be referenced as well:

The `test module <salt.modules.test>` contains many useful functions for inspecting an active Salt connection.

The same syntax works for all modules types:

One of the workhorse state module functions in Salt is the `file.managed <salt.states.file.managed>` function.

Settings

Individual settings in the Salt Master or Salt Minion configuration files are cross-referenced using two custom roles, `conf_master` and `conf_minion`.

The `minion ID <id>` setting is a unique identifier for a single minion.

Documentation Changes and Fixes

Documentation changes and fixes should be made against the earliest supported release branch that the update applies to. The practice of updating a release branch instead of making all documentation changes against Salt’s main, default branch, `develop`, is necessary in order for the docs to be as up-to-date as possible when the docs are built.

The workflow mentioned above is also in line with the recommendations outlined in Salt’s Contributing page. You can read more about how to choose where to submit documentation fixes by reading the Which Salt branch? section.

For an explanation of how to submit changes against various branches, see the Sending a GitHub pull request section. Specifically, see the section describing how to Create a new branch and the steps that follow.

Building the documentation

1. Install Sphinx using a system package manager or pip. The package name is often of the form `python-sphinx`. There are no other dependencies.

2. Build the documentation using the provided Makefile or `.bat` file on Windows.

   ```bash
   cd /path/to/salt/doc
   make html
   ```

3. The generated documentation will be written to the `doc/_build/<format>` directory.

4. A useful method of viewing the HTML documentation locally is to start Python’s built-in HTTP server:

   ```bash
   cd /path/to/salt/doc/_build/html
   python -m SimpleHTTPServer
   ```

   Then pull up the documentation in a web browser at `http://localhost:8000/`. 
36.22.2 Salt Formulas

Formulas are pre-written Salt States. They are as open-ended as Salt States themselves and can be used for tasks such as installing a package, configuring, and starting a service, setting up users or permissions, and many other common tasks.

All official Salt Formulas are found as separate Git repositories in the `saltstack-formulas` organization on GitHub: https://github.com/saltstack-formulas

As a simple example, to install the popular Apache web server (using the normal defaults for the underlying distro) simply include the `apache-formula` from a top file:

```yaml
base:
  'web*':
    - apache
```

Installation

Each Salt Formula is an individual Git repository designed as a drop-in addition to an existing Salt State tree. Formulas can be installed in the following ways.

Adding a Formula as a GitFS remote

One design goal of Salt's GitFS fileserver backend was to facilitate reusable States. GitFS is a quick and natural way to use Formulas.

1. **Install and configure GitFS.**

2. Add one or more Formula repository URLs as remotes in the `gitfs_remotes` list in the Salt Master configuration file:

   ```yaml
gitfs_remotes:
    - https://github.com/saltstack-formulas/apache-formula
    - https://github.com/saltstack-formulas/memcached-formula
   ```

   **We strongly recommend forking a formula repository** into your own GitHub account to avoid unexpected changes to your infrastructure.

   Many Salt Formulas are highly active repositories so pull new changes with care. Plus any additions you make to your fork can be easily sent back upstream with a quick pull request!

3. Restart the Salt master.

Adding a Formula directory manually

Formulas are simply directories that can be copied onto the local file system by using Git to clone the repository or by downloading and expanding a tarball or zip file of the repository. The directory structure is designed to work with `file_roots` in the Salt master configuration.

1. Clone or download the repository into a directory:

   ```bash
   mkdir -p /srv/formulas
cd /srv/formulas
git clone https://github.com/saltstack-formulas/apache-formula.git
   ```
```bash
# or
mkdir -p /srv/formulas
cd /srv/formulas
wget https://github.com/saltstack-formulas/apache-formula/archive/master.tar.gz
tar xf apache-formula-master.tar.gz
```

2. Add the new directory to `file_roots`:

```yaml
file_roots:
    base:
        - /srv/salt
        - /srv/formulas/apache-formula
```

3. Restart the Salt Master.

**Usage**

Each Formula is intended to be immediately usable with sane defaults without any additional configuration. Many formulas are also configurable by including data in Pillar; see the `pillar.example` file in each Formula repository for available options.

**Including a Formula in an existing State tree**

Formulas may be included in an existing `sls` file. This is often useful when a state you are writing needs to `require` or `extend` a state defined in the formula.

Here is an example of a state that uses the `epel-formula` in a `require` declaration which directs Salt to not install the `python26` package until after the EPEL repository has also been installed:

```yaml
include:
    - epel

python26:
    pkg.installed:
        - require:
            - pkg: epel
```

**Including a Formula from a Top File**

Some Formulas perform completely standalone installations that are not referenced from other state files. It is usually cleanest to include these Formulas directly from a Top File.

For example the easiest way to set up an OpenStack deployment on a single machine is to include the `openstack-standalone-formula` directly from a `top.sls` file:

```yaml
base:
    'myopenstackmaster':
        - openstack
```

Quickly deploying OpenStack across several dedicated machines could also be done directly from a Top File and may look something like this:
base:
  'controller':
    - openstack.horizon
    - openstack.keystone
  'hyper-*':
    - openstack.nova
    - openstack.glance
  'storage-*':
    - openstack.swift

Configuring Formula using Pillar

Salt Formulas are designed to work out of the box with no additional configuration. However, many Formula support additional configuration and customization through Pillar. Examples of available options can be found in a file named pillar.example in the root directory of each Formula repository.

Using Formula with your own states

Remember that Formula are regular Salt States and can be used with all Salt's normal state mechanisms. Formula can be required from other States with require declarations, they can be modified using extend, they can made to watch other states with The _in versions of requisites.

The following example uses the stock apache-formula alongside a custom state to create a vhost on a Debian/Ubuntu system and to reload the Apache service whenever the vhost is changed.

```bash
# Include the stock, upstream apache formula.
include:
  - apache

# Use the watch_in requisite to cause the apache service state to reload
# apache whenever the my-example-com-vhost state changes.
my-example-com-vhost:
  file:
    - managed
    - name: /etc/apache2/sites-available/my-example-com
    - watch_in:
      - service: apache
```

Don't be shy to read through the source for each Formula!

Reporting problems & making additions

Each Formula is a separate repository on GitHub. If you encounter a bug with a Formula please file an issue in the respective repository! Send fixes and additions as a pull request. Add tips and tricks to the repository wiki.

Writing Formulas

Each Formula is a separate repository in the saltstack-formulas organization on GitHub.

Note: Get involved creating new Formulas
The best way to create new Formula repositories for now is to create a repository in your own account on GitHub and notify a SaltStack employee when it is ready. We will add you to the contributors team on the saltstack-formulas organization and help you transfer the repository over. Ping a SaltStack employee on IRC (#salt on Freenode) or send an email to the salt-users mailing list.

There are a lot of repositories in that organization! Team members can manage which repositories they are subscribed to on GitHub's watching page: https://github.com/watching.

Style

Maintainability, readability, and reusability are all marks of a good Salt sls file. This section contains several suggestions and examples.

```yaml
# Deploy the stable master branch unless version overridden by passing # Pillar at the CLI or via the Reactor.

deploy_myapp:
  git.latest:
    - name: git@github.com/myco/myapp.git
    - version: {{ salt.pillar.get('myapp:version', 'master') }}
```

Use a descriptive State ID

The ID of a state is used as a unique identifier that may be referenced via other states in requisites. It must be unique across the whole state tree (it is a key in a dictionary, after all).

In addition a state ID should be descriptive and serve as a high-level hint of what it will do, or manage, or change. For example, deploy_webapp, or apache, or reload_firewall.

Use module.function notation

So-called `short-declaration` notation is preferred for referencing state modules and state functions. It provides a consistent pattern of module.function shared between Salt States, the Reactor, Salt Mine, the Scheduler, as well as with the CLI.

```yaml
# Do
apache:
  pkg.installed:
    - name: httpd

# Don't
apache:
  pkg:
    - installed
    - name: httpd
```

Salt's state compiler will transform `short-decs` into the longer format when compiling the human-friendly highstate structure into the machine-friendly lowstate structure.

Specify the name parameter

Use a unique and permanent identifier for the state ID and reserve name for data with variability.
The *name declaration* is a required parameter for all state functions. The state ID will implicitly be used as *name* if it is not explicitly set in the state.

In many state functions the *name* parameter is used for data that varies such as OS-specific package names, OS-specific file system paths, repository addresses, etc. Any time the ID of a state changes all references to that ID must also be changed. Use a permanent ID when writing a state the first time to future-proof that state and allow for easier refactors down the road.

**Comment state files**

YAML allows comments at varying indentation levels. It is a good practice to comment state files. Use vertical whitespace to visually separate different concepts or actions.

```yaml
# Start with a high-level description of the current sls file.
# Explain the scope of what it will do or manage.

# Comment individual states as necessary.
update_a_config_file:
  # Provide details on why an unusual choice was made. For example:
  #
  # This template is fetched from a third-party and does not fit our
  # company norm of using Jinja. This must be processed using Mako.
  file.managed:
    - name: /path/to/file.cfg
      - source: salt://path/to/file.cfg.template
      - template: mako

  # Provide a description or explanation that did not fit within the state
  # ID. For example:
  #
  # Update the application's last-deployed timestamp.
  # This is a workaround until Bob configures Jenkins to automate RPM
  # builds of the app.
  cmd.run:
    # FIXME: Joe needs this to run on Windows by next quarter. Switch these
    # from shell commands to Salt's file.managed and file.replace state
    # modules.
    - name: |
      touch /path/to/file_last_updated
      sed -e 's/foo/bar/g' /path/to/file_environment
    - onchanges:
      - file: a_config_file
```

Be careful to use Jinja comments for commenting Jinja code and YAML comments for commenting YAML code.

```yaml
# BAD EXAMPLE
# The Jinja in this YAML comment is still executed!
# {% set apache_is_installed = 'apache' in salt.pkg.list_pkgs() %}

# GOOD EXAMPLE
# The Jinja in this Jinja comment will not be executed.
{% # set apache_is_installed = 'apache' in salt.pkg.list_pkgs() % #}
```
Easy on the Jinja!

Jinja templating provides vast flexibility and power when building Salt sls files. It can also create an unmaintainable tangle of logic and data. Speaking broadly, Jinja is best used when kept apart from the states (as much as is possible).

Below are guidelines and examples of how Jinja can be used effectively.

**Know the evaluation and execution order**

High-level knowledge of how Salt states are compiled and run is useful when writing states.

The default *renderer* setting in Salt is Jinja piped to YAML. Each is a separate step. Each step is not aware of the previous or following step. Jinja is not YAML aware, YAML is not Jinja aware; they cannot share variables or interact.

- Whatever the Jinja step produces must be valid YAML.
- Whatever the YAML step produces must be a valid *highstate data structure*. (This is also true of the final step for *any of the alternate renderers* in Salt.)
- Highstate can be thought of as a human-friendly data structure; easy to write and easy to read.
- Salt's state compiler validates the *highstate* and compiles it to low state.
- Low state can be thought of as a machine-friendly data structure. It is a list of dictionaries that each map directly to a function call.
- Salt's state system finally starts and executes on each ``chunk'' in the low state. Remember that requisites are evaluated at runtime.
- The return for each function call is added to the `running` dictionary which is the final output at the end of the state run.

The full evaluation and execution order:

```
Jinja -> YAML -> Highstate -> low state -> execution
```

**Avoid changing the underlying system with Jinja**

Avoid calling commands from Jinja that change the underlying system. Commands run via Jinja do not respect Salt's dry-run mode (*test=True*)! This is usually in conflict with the idempotent nature of Salt states unless the command being run is also idempotent.

**Inspect the local system**

A common use for Jinja in Salt states is to gather information about the underlying system. The *grains* dictionary available in the Jinja context is a great example of common data points that Salt itself has already gathered. Less common values are often found by running commands. For example:

```
{% set is_selinux_enabled = salt.cmd.run('sestatus') == '1' %}
```

This is usually best done with a variable assignment in order to separate the data from the state that will make use of the data.
Gather external data

One of the most common uses for Jinja is to pull external data into the state file. External data can come from anywhere like API calls or database queries, but it most commonly comes from flat files on the file system or Pillar data from the Salt Master. For example:

{% set some_data = salt.pillar.get('some_data', { 'sane default': True }) %}
{% or %}
{% import_yaml 'path/to/file.yaml' as some_data %}
{% or %}
{% import_json 'path/to/file.json' as some_data %}
{% or %}
{% import_text 'path/to/ssh_key.pub' as ssh_pub_key %}
{% or %}
{% from 'path/to/other_file.jinja' import some_data with context %}

This is usually best done with a variable assignment in order to separate the data from the state that will make use of the data.

Light conditionals and looping

Jinja is extremely powerful for programatically generating Salt states. It is also easy to overuse. As a rule of thumb, if it is hard to read it will be hard to maintain!

Separate Jinja control-flow statements from the states as much as is possible to create readable states. Limit Jinja within states to simple variable lookups.

Below is a simple example of a readable loop:

{% for user in salt.pillar.get('list_of_users', []) %}
  {{ user.name }}-{{ loop.index }}:
  user.present:
    - name: {{ user.name }}
    - shell: {{ user.shell }}
{% endfor %}

Avoid putting a Jinja conditionals within Salt states where possible. Readability suffers and the correct YAML indentation is difficult to see in the surrounding visual noise. Parameterization (discussed below) and variables are both useful techniques to avoid this. For example:

# ---- Bad example ---- #
apache:
  pkg.installed:
    {% if grains.os_family == 'RedHat' %}
      - name: httpd
    {% endif %}
Dictionaries are useful to effectively "namespace" a collection of variables. This is useful with parameterization (discussed below). Dictionaries are also easily combined and merged. And they can be directly serialized into YAML which is often easier than trying to create valid YAML through templating. For example:

```yaml
haproxy_conf:
  file.managed:
    - name: /etc/haproxy/haproxy.cfg
    - template: jinja
      {% if 'external_loadbalancer' in grains.roles %}
        - source: salt://haproxy/external_haproxy.cfg
      {% endif %}
      {% if 'internal_loadbalancer' in grains.roles %}
        - source: salt://haproxy/internal_haproxy.cfg
      {% endif %}
      - context:
        - ssl_termination: True
          {% if 'external_loadbalancer' in grains.roles %}
          - ssl_termination: False
            {% endif %}

  # ---- Better example ---- #

common_settings:
  bind_port: 80

internal_loadbalancer:
  source: salt://haproxy/internal_haproxy.cfg
  settings:
```
bind_port: 8080
ssl_termination: False

external_loadbalancer:
  source: salt://haproxy/external_haproxy.cfg
  settings:
    ssl_termination: True

{% if 'external_loadbalancer' in grains.roles %}
  {% set haproxy = haproxy_defaults['external_loadbalancer'] %}
{% elif 'internal_loadbalancer' in grains.roles %}
  {% set haproxy = haproxy_defaults['internal_loadbalancer'] %}
{% endif %}

{% do haproxy.settings.update(haproxy_defaults.common_settings) %}

haproxy_conf:
  file.managed:
    - name: /etc/haproxy/haproxy.cfg
    - template: jinja
    - source: {{ haproxy.source }}
    - context: {{ haproxy.settings | yaml() }}

There is still room for improvement in the above example. For example, extracting into an external file or replacing the if-elif conditional with a function call to filter the correct data more succinctly. However, the state itself is simple and legible, the data is separate and also simple and legible. And those suggested improvements can be made at some future date without altering the state at all!

**Avoid heavy logic and programming**

Jinja is not Python. It was made by Python programmers and shares many semantics and some syntax but it does not allow for arbitrary Python function calls or Python imports. Jinja is a fast and efficient templating language but the syntax can be verbose and visually noisy.

Once Jinja use within an sls file becomes slightly complicated -- long chains of if-elif-elif-else statements, nested conditionals, complicated dictionary merges, wanting to use sets -- instead consider using a different Salt renderer, such as the Python renderer. As a rule of thumb, if it is hard to read it will be hard to maintain -- switch to a format that is easier to read.

Using alternate renderers is very simple to do using Salt’s ```she-bang`` syntax at the top of the file. The Python renderer must simply return the correct highstate data structure. The following example is a state tree of two sls files, one simple and one complicated.

```
/srv/salt/top.sls:

base:
  '*':
    - common_configuration
    - roles_configuration

/srv/salt/common_configuration.sls:

common_users:
  user.present:
    - names: [larry, curly, moe]
```
/srv/salt/roles_configuration:

```python
#!py
def run():
    list_of_roles = set()

    # This example has the minion id in the form 'web-03-dev'.
    # Easily access the grains dictionary:
    try:
        app, instance_number, environment = __grains__['id'].split('-')
        instance_number = int(instance_number)
    except ValueError:
        app, instance_number, environment = ['Unknown', 0, 'dev']

    list_of_roles.add(app)

    if app == 'web' and environment == 'dev':
        list_of_roles.add('primary')
        list_of_roles.add('secondary')
    elif app == 'web' and environment == 'staging':
        if instance_number == 0:
            list_of_roles.add('primary')
        else:
            list_of_roles.add('secondary')

    # Easily cross-call Salt execution modules:
    if __salt__['myutils.query_valid_ec2_instance']():
        list_of_roles.add('is_ec2_instance')

    return {
        'set_roles_grains': {
            'grains.present': [
                {'name': 'roles'},
                {'value': list(list_of_roles)}
            ],
        },
    }
```

Jinja Macros

In Salt sls files Jinja macros are useful for one thing and one thing only: creating mini templates that can be reused and rendered on demand. Do not fall into the trap of thinking of macros as functions; Jinja is not Python (see above).

Macros are useful for creating reusable, parameterized states. For example:

```jinja
{% macro user_state(state_id, user_name, shell='/bin/bash', groups=[]) %}
{{ state_id }}:
    user.present:
        - name: {{ user_name }}
        - shell: {{ shell }}
        - groups: {{ groups | json() }}
{% endmacro %}

{% for user_info in salt.pillar.get('my_users', []) %}
{{ user_state('user_number_' ~ loop.index, **user_info) }}
{% endfor %}
```
Macros are also useful for creating one-off "serializers" that can accept a data structure and write that out as a domain-specific configuration file. For example, the following macro could be used to write a php.ini config file:

```
/srv/salt/php.sls:

php_ini:
  file.managed:
    - name: /etc/php.ini
    - source: salt://php.ini.tmpl
    - template: jinja
    - context:
      php_ini_settings: {{ salt.pillar.get('php_ini', {}) | json() }}
```

```
/srv/pillar/php.sls:

php_ini:
  PHP:
    engine: 'On'
    short_open_tag: 'Off'
    error_reporting: 'E_ALL & ~E_DEPRECATED & ~E_STRICT'
```

```
/srv/salt/php.ini.tmpl:

{% macro php_ini_serializer(data) %}
{% for section_name, name_val_pairs in data.items() %}
  [{{ section_name }}]
  {{ for name, val in name_val_pairs.items() -%}}
  {{ name }} = "{{ val }}"
  {{ endfor %}}
{% endfor %}
{% endmacro %}

; File managed by Salt at <{{ source }}>.  
; Your changes will be overwritten.

{{ php_ini_serializer-php_ini_settings }}
```

### Abstracting static defaults into a lookup table

Separate data that a state uses from the state itself to increases the flexibility and reusability of a state. An obvious and common example of this is platform-specific package names and file system paths. Another example is sane defaults for an application, or common settings within a company or organization. Organizing such data as a dictionary (aka hash map, lookup table, associative array) often provides a lightweight namespacing and allows for quick and easy lookups. In addition, using a dictionary allows for easily merging and overriding static values within a lookup table with dynamic values fetched from Pillar.

A strong convention in Salt Formulas is to place platform-specific data, such as package names and file system paths, into a file named `map.jinja` that is placed alongside the state files.

The following is an example from the MySQL Formula. The `grains.filter_by` function performs a lookup on that table using the `os_family` grain (by default).

The result is that the `mysql` variable is assigned to a `subset` of the lookup table for the current platform. This allows states to reference, for example, the name of a package without worrying about the underlying OS. The syntax for referencing a value is a normal dictionary lookup in Jinja, such as `{{ mysql['service'] }}` or the shorthand `{{ mysql.service }}`.

---

36.22. Salt Conventions
map.jinja:

```python
{% set mysql = salt['grains.filter_by']({
    'Debian': {
        'server': 'mysql-server',
        'client': 'mysql-client',
        'service': 'mysqld',
        'config': '/etc/mysql/my.cnf',
        'python': 'python-mysqldb',
    },
    'RedHat': {
        'server': 'mysql-server',
        'client': 'mysql',
        'service': 'mysqld',
        'config': '/etc/my.cnf',
        'python': 'MySQL-python',
    },
    'Gentoo': {
        'server': 'dev-db/mysql',
        'client': 'dev-db/mysql',
        'service': 'mysql',
        'config': '/etc/mysql/my.cnf',
        'python': 'dev-python/mysqld-python',
    },
}, merge=salt['pillar.get']('mysql:lookup')) %}
```

Values defined in the map file can be fetched for the current platform in any state file using the following syntax:

```python
{% from "mysql/map.jinja" import mysql with context %}

mysql-server:
    pkg.installed:
        - name: {{ mysql.server }}
    service.running:
        - name: {{ mysql.service }}
```

**Collecting common values**

Common values can be collected into a `base` dictionary. This minimizes repetition of identical values in each of the `lookup_dict` sub-dictionaries. Now only the values that are different from the base must be specified of the alternates:

map.jinja:

```python
{% set mysql = salt['grains.filter_by']({
    'default': {
        'server': 'mysql-server',
        'client': 'mysql-client',
        'service': 'mysqld',
        'config': '/etc/mysql/my.cnf',
        'python': 'python-mysqldb',
    },
    'Debian': {
    },
    'RedHat': {
        'client': 'mysql',
        'service': 'mysqld',
    },
}, merge=salt['pillar.get']('mysql:lookup')) %}
```
Overriding values in the lookup table

Allow static values within lookup tables to be overridden. This is a simple pattern which once again increases flexibility and reusability for state files.

The `merge` argument in `filter_by` specifies the location of a dictionary in Pillar that can be used to override values returned from the lookup table. If the value exists in Pillar it will take precedence.

This is useful when software or configuration files is installed to non-standard locations or on unsupported platforms. For example, the following Pillar would replace the `config` value from the call above.

```yaml
mysql:
  lookup:
    config: /usr/local/etc/mysql/my.cnf
```

**Note:** Protecting Expansion of Content with Special Characters

When templating keep in mind that YAML does have special characters for quoting, flows, and other special structure and content. When a Jinja substitution may have special characters that will be incorrectly parsed by YAML care must be taken. It is a good policy to use the `yaml_encode` or the `yaml_dquote` Jinja filters:

```jinja
{% set foo = 7.7 %}
{% set bar = 'none' %}
{% set baz = true %}
{% set zap = 'The word of the day is "salty".' %}
{% set zip = "The quick brown fox . . ." %}

foo: {{ foo|yaml_encode }}
bar: {{ bar|yaml_encode }}
baz: {{ baz|yaml_encode }}
zap: {{ zap|yaml_encode }}
zip: {{ zip|yaml_dquote }}
```

The above will be rendered as below:

```
foo: 7.7
bar: null
baz: true
zap: "The word of the day is \"salty\"."
zip: "\"The quick brown fox . . .\""
```

The `filter_by` function performs a simple dictionary lookup but also allows for fetching data from Pillar and overriding data stored in the lookup table. That same workflow can be easily performed without using `filter_by`; other dictionaries besides data from Pillar can also be used.
When to use lookup tables

The `map.jinja` file is only a convention within Salt Formulas. This greater pattern is useful for a wide variety of data in a wide variety of workflows. This pattern is not limited to pulling data from a single file or data source. This pattern is useful in States, Pillar and the Reactor, for example.

Working with a data structure instead of, say, a config file allows the data to be cobbled together from multiple sources (local files, remote Pillar, database queries, etc), combined, overridden, and searched.

Below are a few examples of what lookup tables may be useful for and how they may be used and represented.

Platform-specific information

An obvious pattern and one used heavily in Salt Formulas is extracting platform-specific information such as package names and file system paths in a file named `map.jinja`. The pattern is explained in detail above.

Sane defaults

Application settings can be a good fit for this pattern. Store default settings along with the states themselves and keep overrides and sensitive settings in Pillar. Combine both into a single dictionary and then write the application config or settings file.

The example below stores most of the Apache Tomcat `server.xml` file alongside the Tomcat states and then allows values to be updated or augmented via Pillar. (This example uses the BadgerFish format for transforming JSON to XML.)

```
/srv/salt/tomcat/defaults.yaml:

Server:
  '@port': '8005'
  '@shutdown': SHUTDOWN
GlobalNamingResources:
  Resource:
    '@auth': Container
    '@description': User database that can be updated and saved
    '@factory': org.apache.catalina.users.MemoryUserDatabaseFactory
    '@name': UserDatabase
    '@pathname': conf/tomcat-users.xml
    '@type': org.apache.catalina.UserDatabase
# <...snip...>
```

```
/srv/pillar/tomcat.sls:

appX:
  server_xml_overrides:
    Server:
      Service:
        '@name': Catalina
      Connector:
        '@port': '8009'
        '@protocol': AJP/1.3
```
The `file.serialize` state can provide a shorthand for creating some files from data structures. There are also many examples within Salt Formulas of creating one-off `serializers` (often as Jinja macros) that reformat a data structure to a specific config file format. For example, `Nginx vhosts` or the `php.ini`:

___: https://github.com/saltstack-formulas/nginx-formula/blob/5cad4512/nginx/ng/vhosts_config.sls
___: https://github.com/saltstack-formulas/php-formula/blob/82e2cd3a/php/ng/files/php.ini

### Environment specific information

A single state can be reused when it is parameterized as described in the section below, by separating the data the state will use from the state that performs the work. This can be the difference between deploying `Application X` and `Application Y`, or the difference between production and development. For example:

/srv/salt/app/deploy.sls:

```yaml
{% import_yaml 'app/defaults.yaml' as app_defaults %}
{% set app = app_defaults.get(salt.grains.get('role')) %}
{% do app_defaults.update(salt.pillar.get('myapp', {})) %}

deploy_application:
  git.latest:
    - name: {{ app.repo_url }}
    - version: {{ app.version }}
    - target: {{ app.deploy_dir }}

myco/myapp/deployed:
  event.send:
    - data:
      - version: {{ app.version }}
      - onchanges:
        - git: deploy_application
```

36.22. Salt Conventions 2257
Single-purpose SLS files

Each sls file in a Formula should strive to do a single thing. This increases the reusability of this file by keeping unrelated tasks from getting coupled together.

As an example, the base Apache formula should only install the Apache httpd server and start the httpd service. This is the basic, expected behavior when installing Apache. It should not perform additional changes such as set the Apache configuration file or create vhosts.

If a formula is single-purpose as in the example above, other formulas, and also other states can include and use that formula with Requisites and Other Global State Arguments without also including undesirable or unintended side-effects.

The following is a best-practice example for a reusable Apache formula. (This skips platform-specific options for brevity. See the full apache-formula for more.)

```
# apache/init.sls
apache:
  pkg.installed:
      [...]
  service.running:
      [...]

# apache/mod_wsgi.sls
include:
  - apache

mod_wsgi:
  pkg.installed:
      [...]
  - require:
    - pkg: apache

# apache/conf.sls
include:
  - apache

apache_conf:
  file.managed:
      [...]
  - watch_in:
    - service: apache
```

To illustrate a bad example, say the above Apache formula installed Apache and also created a default vhost. The mod_wsgi state would not be able to include the Apache formula to create that dependency tree without also installing the unneeded default vhost.
Formulas should be reusable. Avoid coupling unrelated actions together.

Parameterization

Parameterization is a key feature of Salt Formulas and also for Salt States. Parameterization allows a single Formula to be reused across many operating systems; to be reused across production, development, or staging environments; and to be reused by many people all with varying goals.

Writing states, specifying ordering and dependencies is the part that takes the longest to write and to test. Filling those states out with data such as users or package names or file locations is the easy part. How many users, what those users are named, or where the files live are all implementation details that should be parameterized. This separation between a state and the data that populates a state creates a reusable formula.

In the example below the data that populates the state can come from anywhere -- it can be hard-coded at the top of the state, it can come from an external file, it can come from Pillar, it can come from an execution function call, or it can come from a database query. The state itself doesn't change regardless of where the data comes from. Production data will vary from development data will vary from data from one company to another, however the state itself stays the same.

```
{% set user_list = [
    {'name': 'larry', 'shell': 'bash'},
    {'name': 'curly', 'shell': 'bash'},
    {'name': 'moe', 'shell': 'zsh'},
] %}

{% or %}

{% set user_list = salt['pillar.get']('user_list') %}

{% or %}

{% load_json "default_users.json" as user_list %}

{% or %}

{% set user_list = salt['acme_utils.get_user_list']() %}

{% for user in list_list %}

{{ user.name }}:
    user.present:
        - name: {{ user.name }}
        - shell: {{ user.shell }}

{% endfor %}
```

Configuration

Formulas should strive to use the defaults of the underlying platform, followed by defaults from the upstream project, followed by sane defaults for the formula itself.

As an example, a formula to install Apache should not change the default Apache configuration file installed by the OS package. However, the Apache formula should include a state to change or override the default configuration file.
Pillar overrides

Pillar lookups must use the safe `get()` and must provide a default value. Create local variables using the Jinja `set` construct to increase readability and to avoid potentially hundreds or thousands of function calls across a large state tree.

```jinja
{% from "apache/map.jinja" import apache with context %}
{% set settings = salt['pillar.get']('apache', {}) %}

mod_status:
  file.managed:
    - name: {{ apache.conf_dir }}
    - source: {{ settings.get('mod_status_conf', 'salt://apache/mod_status.conf') }}
    - template: {{ settings.get('template_engine', 'jinja') }}
```

Any default values used in the Formula must also be documented in the `pillar.example` file in the root of the repository. Comments should be used liberally to explain the intent of each configuration value. In addition, users should be able copy-and-paste the contents of this file into their own Pillar to make any desired changes.

Scripting

Remember that both State files and Pillar files can easily call out to Salt execution modules and have access to all the system grains as well.

```jinja
{% if '/storage' in salt['mount.active']() %}
/usr/local/etc/myfile.conf:
  file:
    - symlink
    - target: /storage/myfile.conf
{% endif %}
```

Jinja macros to encapsulate logic or conditionals are discouraged in favor of writing custom execution modules in Python.

Repository structure

A basic Formula repository should have the following layout:

```
foo-formula
|-- foo/
   |-- map.jinja
   |-- init.sls
   |-- bar.sls
   -- CHANGELOG.rst
   -- LICENSE
   -- pillar.example
   -- README.rst
   -- VERSION
```

See also:

template-formula

The template-formula repository has a pre-built layout that serves as the basic structure for a new formula repository. Just copy the files from there and edit them.
**README.rst**

The README should detail each available .sls file by explaining what it does, whether it has any dependencies on other formulas, whether it has a target platform, and any other installation or usage instructions or tips.

A sample skeleton for the README.rst file:

```rst
---

foo
---

Install and configure the FOO service.

.. note::

   See the full `Salt Formulas installation and usage instructions`_.

Available states

```
```

```
```

Installs the ``foo`` package and enables the service.

```
```

Installs the ``bar`` package.

**CHANGELOG.rst**

The CHANGELOG.rst file should detail the individual versions, their release date and a set of bullet points for each version highlighting the overall changes in a given version of the formula.

A sample skeleton for the CHANGELOG.rst file:

```
```

- Re-organized formula file layout
- Fixed filename used for upstart logger template
- Allow for pillar message to have default if none specified

**Versioning**

Formula are versioned according to Semantic Versioning, http://semver.org/.
Note: Given a version number MAJOR.MINOR.PATCH, increment the:

1. MAJOR version when you make incompatible API changes,
2. MINOR version when you add functionality in a backwards-compatible manner, and
3. PATCH version when you make backwards-compatible bug fixes.

Additional labels for pre-release and build metadata are available as extensions to the MAJOR.MINOR.PATCH format.

Formula versions are tracked using Git tags as well as the VERSION file in the formula repository. The VERSION file should contain the currently released version of the particular formula.

Testing Formulas

A smoke-test for invalid Jinja, invalid YAML, or an invalid Salt state structure can be performed by with the state.show_sls function:

```
salt '*' state.show_sls apache
```

Salt Formulas can then be tested by running each .sls file via state.apply and checking the output for the success or failure of each state in the Formula. This should be done for each supported platform.

**36.22.3 SaltStack Packaging Guide**

Since Salt provides a powerful toolkit for system management and automation, the package can be split into a number of sub-tools. While packaging Salt as a single package containing all components is perfectly acceptable, the split packages should follow this convention.

**Patching Salt For Distributions**

The occasion may arise where Salt source and default configurations may need to be patched. It is preferable if Salt is only patched to include platform specific additions or to fix release time bugs. It is preferable that configuration settings and operations remain in the default state, as changes here lowers the user experience for users moving across distributions.

In the event where a packager finds a need to change the default configuration it is advised to add the files to the master.d or minion.d directories.

**Source Files**

Release packages should always be built from the source tarball distributed via pypi. Release packages should NEVER use a git checkout as the source for distribution.

**Single Package**

Shipping Salt as a single package, where the minion, master, and all tools are together is perfectly acceptable and practiced by distributions such as FreeBSD.
Split Package

Salt should always be split in a standard way, with standard dependencies, this lowers cross distribution confusion about what components are going to be shipped with specific packages. These packages can be defined from the Salt Source as of Salt 2014.1.0:

Salt Common

The `salt-common` or `salt` package should contain the files provided by the salt python package, or all files distributed from the `salt/` directory in the source distribution packages. The documentation contained under the `doc/` directory can be a part of this package but splitting out a doc package is preferred. Since salt-call is the entry point to utilize the libs and is useful for all salt packages it is included in the salt-common package.

Name

- `salt` OR `salt-common`

Files

- `salt/*`
- `man/salt.7`
- `scripts/salt-call`
- `tests/*`
- `man/salt-call.1`

Depends

- `Python 2.6-2.7`
- `PyYAML`
- `jinja2`

Salt Master

The `salt-master` package contains the applicable scripts, related man pages and init information for the given platform.

Name

- `salt-master`

Files

- `scripts/salt-master`
- `scripts/salt`
• scripts/salt-run
• scripts/salt-key
• scripts/salt-cp
• pkg/<master init data>
• man/salt.1
• man/salt-master.1
• man/salt-run.1
• man/salt-key.1
• man/salt-cp.1
• conf/master

Depends

• Salt Common
• ZeroMQ >= 3.2
• PyZMQ >= 2.10
• PyCrypto
• M2Crypto
• Python MessagePack (Messagepack C lib, or msgpack-pure)

Salt Syndic

The Salt Syndic package can be rolled completely into the Salt Master package. Platforms which start services as part of the package deployment need to maintain a separate salt-syndic package (primarily Debian based platforms).

The Syndic may optionally not depend on the anything more than the Salt Master since the master will bring in all needed dependencies, but fall back to the platform specific packaging guidelines.

Name

• salt-syndic

Files

• scripts/salt-syndic
• pkg/<syndic init data>
• man/salt-syndic.1
Depends

- Salt Common
- Salt Master
- ZeroMQ >= 3.2
- PyZMQ >= 2.10
- PyCrypto
- M2Crypto
- Python MessagePack (Messagepack C lib, or msgpack-pure)

Salt Minion

The Minion is a standalone package and should not be split beyond the salt-minion and salt-common packages.

Name

- salt-minion

Files

- scripts/salt-minion
- pkg/<minion init data>
- man/salt-minion.1
- conf/minion

Depends

- Salt Common
- ZeroMQ >= 3.2
- PyZMQ >= 2.10
- PyCrypto
- M2Crypto
- Python MessagePack (Messagepack C lib, or msgpack-pure)

Salt SSH

Since Salt SSH does not require the same dependencies as the minion and master, it should be split out.

Name

- salt-ssh
Files

• scripts/salt-ssh
• man/salt-ssh.1
• conf/cloud

Depends

• Salt Common
  • Python MessagePack (Messagepack C lib, or msgpack-pure)

Salt Cloud

As of Salt 2014.1.0 Salt Cloud is included in the same repo as Salt. This can be split out into a separate package or it can be included in the salt-master package.

Name

• salt-cloud

Files

• scripts/salt-cloud
• man/salt-cloud.1

Depends

• Salt Common
  • apache libcloud >= 0.14.0

Salt Doc

The documentation package is very distribution optional. A completely split package will split out the documentation, but some platform conventions do not prefer this. If the documentation is not split out, it should be included with the Salt Common package.

Name

• salt-doc

Files

• doc/*
Optional Depends

- Salt Common
- Python Sphinx
- Make

36.22.4 Salt Release Process

The goal for Salt projects is to cut a new feature release every four to six months. This document outlines the process for these releases, and the subsequent bug fix releases which follow.

Feature Release Process

When a new release is ready to be cut, the person responsible for cutting the release will follow the following steps (written using the 0.16 release as an example):

1. All open issues on the release milestone should be moved to the next release milestone. (e.g. from the 0.16 milestone to the 0.17 milestone)
2. Release notes should be created documenting the major new features and bugfixes in the release.
3. Create an annotated tag with only the major and minor version numbers, preceded by the letter v. (e.g. v0.16) This tag will reside on the develop branch.
4. Create a branch for the new release, using only the major and minor version numbers. (e.g. 0.16)
5. On this new branch, create an annotated tag for the first revision release, which is generally a release candidate. It should be preceded by the letter v. (e.g. v0.16.0rc1)
6. The release should be packaged from this annotated tag and uploaded to PyPI as well as the GitHub releases page for this tag.
7. The packagers should be notified on the salt-packagers mailing list so they can create packages for all the major operating systems. (note that release candidates should go in the testing repositories)
8. After the packagers have been given a few days to compile the packages, the release is announced on the salt-users mailing list.
9. Log into RTD and add the new release there. (Have to do it manually)

Maintenance and Bugfix Releases

Once a feature release branch has been cut from develop, the branch moves into a "feature freeze" state. The new release branch enters the merge-forward chain and only bugfixes should be applied against the new branch. Once major bugs have been fixed, a bugfix release can be cut:

1. On the release branch (i.e. 0.16), create an annotated tag for the revision release. It should be preceded by the letter v. (e.g. v0.16.2) Release candidates are unnecessary for bugfix releases.
2. The release should be packaged from this annotated tag and uploaded to PyPI.
3. The packagers should be notified on the salt-packagers mailing list so they can create packages for all the major operating systems.
4. After the packagers have been given a few days to compile the packages, the release is announced on the salt-users mailing list.
For more information about the difference between the develop branch and bugfix release branches, please refer to the Which Salt Branch? section of Salt’s Contributing documentation.

### 36.22.5 Salt Coding Style

Salt is developed with a certain coding style, while the style is dominantly PEP 8 it is not completely PEP 8. It is also noteworthy that a few development techniques are also employed which should be adhered to. In the end, the code is made to be "Salty".

Most importantly though, we will accept code that violates the coding style and KINDLY ask the contributor to fix it, or go ahead and fix the code on behalf of the contributor. Coding style is NEVER grounds to reject code contributions, and is never grounds to talk down to another member of the community (There are no grounds to treat others without respect, especially people working to improve Salt)!

### Linting

Most Salt style conventions are codified in Salt’s .pylintrc file. Salt's pylint file has two dependencies: pylint and saltpylint. You can install these dependencies with pip:

```
pip install pylint
pip install saltpylint
```

The .pylintrc file is found in the root of the Salt project and can be passed as an argument to the pylint program as follows:

```
pylint --rcfile=/path/to/salt/.pylintrc salt/dir/to/lint
```

### Variables

Variables should be a minimum of three characters and should provide an easy-to-understand name of the object being represented.

When keys and values are iterated over, descriptive names should be used to represent the temporary variables.

Multi-word variables should be separated by an underscore.

Variables which are two-letter words should have an underscore appended to them to pad them to three characters.

### Strings

Salt follows a few rules when formatting strings:

### Single Quotes

In Salt, all strings use single quotes unless there is a good reason not to. This means that docstrings use single quotes, standard strings use single quotes etc.:

```python
def foo():
    '''
    A function that does things
    '''
    name = 'A name'
    return name
```
Formatting Strings

All strings which require formatting should use the `.format` string method:

```python
data = 'some text'
more = '{0} and then some'.format(data)
```

Make sure to use indices or identifiers in the format brackets, since empty brackets are not supported by python 2.6. Please do NOT use printf formatting.

Docstring Conventions

Docstrings should always add a newline, docutils takes care of the new line and it makes the code cleaner and more vertical:

**GOOD:**

```python
def bar():
    '''
    Here lies a docstring with a newline after the quotes and is the salty way to handle it! Vertical code is the way to go!
    '''
    return
```

**BAD:**

```python
def baz():
    '''This is not ok!'''
    return
```

When adding a new function or state, where possible try to use a `versionadded` directive to denote when the function or state was added.

```python
def new_func(msg=' '):
    '''
    .. versionadded:: 0.16.0
    Prints what was passed to the function.
    
    msg : None
    The string to be printed.
    '''
    print msg
```

If you are uncertain what version should be used, either consult a core developer in IRC or bring this up when opening your pull request and a core developer will add the proper version once your pull request has been merged. Bugfixes will be available in a bugfix release (i.e. 0.17.1, the first bugfix release for 0.17.0), while new features are held for feature releases, and this will affect what version number should be used in the `versionadded` directive.

Similar to the above, when an existing function or state is modified (for example, when an argument is added), then under the explanation of that new argument a `versionadded` directive should be used to note the version in which the new argument was added. If an argument's function changes significantly, the `versionchanged` directive can be used to clarify this:

```python
def new_func(msg=' ', signature=' '):
```

36.22. Salt Conventions
.. versionadded:: 0.16.0

Prints what was passed to the function.

**msg** : None
The string to be printed. Will be prepended with 'Greetings! '.

.. versionchanged:: 0.17.1

**signature** : None
An optional signature.

.. versionadded 0.17.0

```
print 'Greetings! {0}\n{1}'.format(msg, signature)
```

Dictionaries

Dictionaries should be initialized using `{}` instead of `dict()`.
See here for an in-depth discussion of this topic.

Imports

Salt code prefers importing modules and not explicit functions. This is both a style and functional preference. The functional preference originates around the fact that the module import system used by pluggable modules will include callable objects (functions) that exist in the direct module namespace. This is not only messy, but may unintentionally expose code python libs to the Salt interface and pose a security problem.

To say this more directly with an example, this is **GOOD**:

```python
import os

def minion_path():
    path = os.path.join(self.opts['cachedir'], 'minions')
    return path
```

This on the other hand is **DISCOURAGED**:

```python
from os.path import join

def minion_path():
    path = join(self.opts['cachedir'], 'minions')
    return path
```

The time when this is changed is for importing exceptions, generally directly importing exceptions is preferred:

This is a good way to import exceptions:

```python
from salt.exceptions import CommandExecutionError
```

Absolute Imports

Although **absolute imports** seems like an awesome idea, please do not use it. Extra care would be necessary all over salt's code in order for absolute imports to work as supposed. Believe it, it has been tried before and, as a tried
example, by renaming `salt.modules.sysmod` to `salt.modules.sys`, all other salt modules which needed to import `sys` would have to also import `absolute_import`, which should be avoided.

**Note:** An exception to this rule is the `absolute_import` from `__future__` at the top of each file within the Salt project. This import is necessary for Py3 compatibility. This particular import looks like this:

```python
from __future__ import absolute_import
```

This import is required for all new Salt files and is a good idea to add to any custom states or modules. However, the practice of avoiding absolute imports still applies to all other cases as to avoid a name conflict.

**Vertical is Better**

When writing Salt code, vertical code is generally preferred. This is not a hard rule but more of a guideline. As PEP 8 specifies, Salt code should not exceed 79 characters on a line, but it is preferred to separate code out into more newlines in some cases for better readability:

```python
import os
os.chmod(
    os.path.join(self.opts['sock_dir'],
                'minion_event_pub.ipc'),
    448
)
```

Where there are more line breaks, this is also apparent when constructing a function with many arguments, something very common in state functions for instance:

```python
def managed(name,
            source=None,
            source_hash=''
            user=None,
            group=None,
            mode=None,
            template=None,
            makedirs=False,
            context=None,
            replace=True,
            defaults=None,
            env=None,
            backup='!',
            **kwargs):
```

**Note:** Making function and class definitions vertical is only required if the arguments are longer then 80 characters. Otherwise, the formatting is optional and both are acceptable.

**Line Length**

For function definitions and function calls, Salt adheres to the PEP-8 specification of at most 80 characters per line.
Non function definitions or function calls, please adopt a soft limit of 120 characters per line. If breaking the line reduces the code readability, don’t break it. Still, try to avoid passing that 120 characters limit and remember, vertical is better... unless it isn’t

**Indenting**

Some confusion exists in the python world about indenting things like function calls, the above examples use 8 spaces when indenting comma-delimited constructs.

The confusion arises because the pep8 program INCORRECTLY flags this as wrong, where PEP 8, the document, cites only using 4 spaces here as wrong, as it doesn’t differentiate from a new indent level.

Right:

```python
def managed(name,  
    source=None,  
    source_hash='\'',  
    user=None)
```

WRONG:

```python
def managed(name,  
    source=None,  
    source_hash='\'',  
    user=None)
```

Lining up the indent is also correct:

```python
def managed(name,  
    source=None,  
    source_hash='\'',  
    user=None)
```

This also applies to function calls and other hanging indents.

pep8 and Flake8 (and, by extension, the vim plugin Syntastic) will complain about the double indent for hanging indents. This is a known conflict between pep8 (the script) and the actual PEP 8 standard. It is recommended that this particular warning be ignored with the following lines in `~/.config/flake8`:

```ini
[flake8]
ignore = E226,E241,E242,E126
```

Make sure your Flake8/pep8 are up to date. The first three errors are ignored by default and are present here to keep the behavior the same. This will also work for pep8 without the Flake8 wrapper -- just replace all instances of `flake8` with `pep8`, including the filename.

**Code Churn**

Many pull requests have been submitted that only churn code in the name of PEP 8. Code churn is a leading source of bugs and is strongly discouraged. While style fixes are encouraged they should be isolated to a single file per commit, and the changes should be legitimate, if there are any questions about whether a style change is legitimate please reference this document and the official PEP 8 (http://legacy.python.org/dev/peps/pep-0008/) document before changing code. Many claims that a change is PEP 8 have been invalid, please double check before committing fixes.
Release notes

See the version numbers page for more information about the version numbering scheme.

37.1 Latest Branch Release

Salt 2015.8.12 Release Notes

37.2 Previous Releases

37.2.1 Salt 2015.8.0 Release Notes - Codename Beryllium

2015.8.0 Detailed Change List

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs)

Generated at: 2015-09-09T18:15:43Z

This list includes all pull requests merged into the 2015.8 branch between the forking of the branch from develop and the release of 2015.8.0.

Statistics:

- Total Merges: 682
- Total Issue references: 342
- Total PR references: 866

Pull Requests:

- #26993: (whiteinge) Backport #26975
- #26970: (cachedout) Revert `better path query parsing in fileserver"
- #26980: (terminalmage) Use human-readable cachedirs for gitfs-backed winrepo
- #26969: (TheBigBear) URL of salt windows downloads has changed
- #26968: (TheBigBear) URL of salt windows downloads has changed
- #26958: (s0undt3ch) Bradthurber bootstrap command line help doc update
- #26949: (rallytime) Back-port #25148 to 2015.8
- #26914: (cro) Add salt-proxy script and manpage to setup.py so they will get installed.
- #26909: (terminalmage) Don’t try to git clone from /tmp on Windows
- #26910: (s0undt3ch) Sometimes the event system is just too fast
- #26905: (s0undt3ch) Exit the loop if run_once is true
- #26897: (msteed) spm file hash part deuX
- #26900: (s0undt3ch) If no tag is passed, don’t actually subscribe to anything.
- #26880: (s0undt3ch) Restore backwards compatibility to salt.utils.event
- #26896: (msteed) spm remove: use pkgfiles to calculate file hashes
- #26891: (jtand) Fixed an unboundlocalerror
- #26892: (cachedout) Make the testing ioloop the current one
- #26886: (jtand) Gets the azure version correctly on python-azure 1.0.0
- #26870: (rallytime) Back-port #26834 to 2015.8
- #26865: (dmurphy18) Fix apt preferences for apts, repos for pbuilder building for Debian
- #26873: (terminalmage) Properly handle getting local config values in older git versions
- #26869: (rallytime) Fix provider --> driver change for salt-cloud lxc
- #26858: (terminalmage) Fix a couple version checks for git state and execution module
- #26853: (UtahDave) Fix salt-cloud on windows
- #26852: (basepi) [2015.8] Only reference msgpack if it imported successfully
- #26835: (terminalmage) Backport #26572 to 2015.8
- #26836: (jacobhammons) Added rst source for salt-proxy man page, added build and copy lines ...
- #26818: (terminalmage) Support empty repositories in git.latest
- #26819: (rallytime) Make sure we’re calling _validate_name in the correct place in 2015.8 Linode driver
- #26841: (l2ol33rt) Fix reference before assignment in sqs engine
- #26822: (terminalmage) Add some missing imports for masterless winrepo
- #26831: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- #26826: (techhat) Pass a package name to unregister_file()
- #26757: (cachedout) Fix various filehandle leaks
- #26816: (gtmanfred) rev defaults to HEAD
- #26801: (jacobhammons) Added doc for dockerng minion configuration options
- #26808: (anlutro) Fix git init argument formatting
- #26807: (terminalmage) Move salt.utils.itersplit() to salt.utils.itertools.split()
- #26796: (jacobhammons) Add doc for __states__
- #26764: (sjorge) salt.utils.is_proxy() is no longer always true on SunOS/Illumos/SmartOS
- #26772: (sjorge) pull in smartos 'virt' module from develop
- #26726: (terminalmage) Redact HTTPS Basic Auth in statesfuncs which deal with git remotes
- #26769: (terminalmage) Use --track to set tracking branch on older git versions
- #26765: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- #26761: (sjorge) fix SPM paths on smartos/illumos esky
- #26751: (terminalmage) Fixes for masterless winrepo
- #26745: (rallytime) Make sure pyrax configs are in place before checking for deps
- #26746: (rallytime) Make sure nova configs are set before checking for dependencies
- #26750: (basepi) [2015.8] Add __utils__ to state modules
- #26747: (basepi) [2015.8] Add __states__ to state modules, for cross-calling states
- #26744: (basepi) [2015.8] Fix issue from #26717
- #26735: (s0undt3ch) Add .hg and .cvs to spm_build_exclude
- #26720: (UtahDave) Updates for winrepo in 2015.8 to support jinja, while maintaining backwards compat
- #26719: (jodv) Backport 26532 to 2015.8
- #26721: (rallytime) Linode Driver Cleanup
- #26707: (techhat) Add top_level_dir to FORMULAs
- #26723: (s0undt3ch) Handle SPM paths in the setup script
- #26717: (basepi) [2015.8] Revert loader changes from #26645
- #26712: (techhat) Move SPM paths around
- #26680: (TheBigBear) add more python libs info in `--versions-report`
- #26716: (terminalmage) Allow git identity to be a list
- #26691: (garethgreenaway) Fixes to ipset module for 2015.8
- #26701: (kev009) Ignore the first element of kern.disks split, which is the sysctl name (new disks grain)
- #26678: (terminalmage) Restructure git.latest rewrite to work better when following HEAD
- #26679: (rallytime) Back-port #26661 to 2015.8
- #26684: (techhat) Add reactor formulas to spm
- #26682: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- #26671: (rallytime) Warn users if cloud driver dependencies are missing.
- #26674: (rallytime) Back-port #26583 to 2015.8
- #26670: (techhat) Set up SPM to install -conf packages
- #26657: (jfjindlay) top file compilation fixes
- #26659: (TheBigBear) minor doc edits - spelling
- #26654: (jfjindlay) merge `#26650`_
- #26567: (jtand) Added git version check to git module
- #26649: (twangboy) Fixed Lint for real in win_repo.py
• #26608: (jacobhammons) 2015.8.0 release notes and doc/conf.py updates
• #26646: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• #26645: (rallytime) Back-port #26390 to 2015.8
• #26642: (twangboy) Added function to render winrepo Jinja
• #26625: (twangboy) Correctly detect packages with no version, docs
• #26575: (msteed) Update spm for integration into raas
• #26635: (cro) Don't report windows as a proxy.
• #26622: (rallytime) [2015.8] Also add -Z to script args for cloud tests
• #26619: (rallytime) Apply cloud test fixes from 2015.5 to 2015.8
• #26603: (terminalmage) Fixes for git.latest, git module integration tests, etc.
• #26577: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• #26534: (cachedout) Bump required Tornado version to 4.2.1
• #26566: (cachedout) Don't stacktrace trying to publish without a master
• #26541: (terminalmage) Make winrepo execution module use the same code as the runner
• #26530: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• #26570: (cachedout) Fix haproxy docs to be valid
• #26562: (cachedout) Fix suprious error message with systemd-detect
• #26557: (jfindlay) add docs to #26550
• #26544: (nmadhok) Do not raise KeyError when calling avail_images if VM/template is in disconnected state
• #26501: (terminalmage) Update git_pillar docs, add git.list_worktrees function
• #26521: (terminalmage) Work around upstream git bug when cloning repo as root
• #26518: (krak3n) Fix for "#25492_"
• #26514: (evverx) Unmask a runtime masked services too
• #26529: (mnalt) bugfix: fix service.enable for missing rc.conf
• #26516: (techhat) Move more path operations into SPM loader
• #26533: (cachedout) Fix too aggressive even init check
• #26522: (cro) Do not load package provider if its not a proxy
• #26531: (cachedout) Fix failing event tests and modify event init
• #26433: (cro) Add support for default proxy config options, change default location of proxy config and log to /etc/salt/proxy and /var/log/proxy
• #26504: (nmadhok) [Backport] Adding ability to specify the virtual hardware version when creating VM
• #26517: (cachedout) Better fix for opensuse tornado httpclient
• #26479: (rallytime) Don't allow VMs with duplicate names to be created in EC2/AWS
• #26488: (cachedout) Don't pass unsupported kwarg to tornado
• #26451: (terminalmage) Use `rpm -qa` instead of repoquery to list installed packages
• #26491: (jacobhammons) doc site css fix for tiny fonts that appeared in code or pre tags in ...
• #26442: (rallytime) Hide API Key from debug logs for Linode Driver
• #26441: (rallytime) Refactor a few linode functions to be useful with salt-cloud command
• #26485: (s0und3ch) One more missed typo
• #26495: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• #26492: (cachedout) Fix schedule test error on py26
• #26489: (cachedout) Fixing more tarfile tests on py2.6
• #26475: (cachedout) Better object checking on asyncreq cleanup
• #26477: (cachedout) Fix integration.modules.git.GitModuleTest.test_archive on py26
• #26469: (jtand) --annotate and --message aren’t valid options in older versions of git.
• #26439: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• #26464: (rallytime) Back-port #26456 to 2015.8
• #26463: (rallytime) Back-port #26455 to 2015.8
• #26449: (s0und3ch) The CLI options are not meant to include underscores.
• #26270: (sjorge) salt.modules.network now supports SmartOS and SunOS < Solaris 11
• #26436: (TheBigBear) minor edits
• #26410: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• #26427: (anlutro) git.latest with no rev: fix concatenation error (NoneType and str)
• #26307: (cachedout) Fix bug in top file ordering
• #26428: (cro) Update docs to reflect new pillar structure
• #26429: (cachedout) Add release note regarding tcp transport on freebsd
• #26418: (driskell) Fix forward-merged caching from 2015.5 into 2015.8 to be compatible with the new match_func
• #26252: (DmitryKuzmenko) Issues/24048 http client 2015.8
• #26413: (evverx) Fix service.[start,restart,reload,force-reload] for masked services
• #26393: (dmurphy18) Added option parameters to make_repo to allow for configuration settings
• #26422: (TheBigBear) no dots in SLS filename __AND__ any directories (incl git repos)
• #26323: (0xf10e) Fix Credentials used in glance Exec Module
• #26341: (terminalmage) Rewrite git state and execution modules
• #26419: (terminalmage) Only use pygit2.errors if it exists
• #26423: (ellasp) doc - Correct function name for peer configuration
• #26401: (cachedout) Adapt proxy minion to tornado (w/lint)
• #26400: (rallytime) Back-port #26318 to 2015.8
• #26397: (s0und3ch) A single isinstance() check for all types is enough
• #26385: (gtmanfred) don’t require volume endpoint in nova driver
• #26287: (techhat) Break out SPM components into loaders
• #26384: (TheBigBear) Fix shell quoting for cmd.run
- #26391: (rallytime) Back-port #26367 to 2015.8
- #26383: (rallytime) Allow the creation of a VM without a profile
- #26375: (s0undt3ch) [2015.8] Schema DictItem required attribute fixes
- #26363: (garethgreenaway) Fixes to mount state 2015.8
- #26347: (0xf10e) Load `pkgng` as `pkg` on FreeBSD 9 when providers:pkg == `pkgng`
- #26361: (TronPaul) sign security token
- #26346: (TronPaul) Fix s3 using IAM credentials
- #26331: (mnalt) fix bug in sysrc to allow for empty rc variables
- #26334: (rallytime) Call salt.utils.cloud.bootstrap in GCE Driver provisioning
- #26308: (dmurphy18) Support for environment overrides building packages
- #26279: (TheScriptSage) Merge changes for pull `#26083` and pull `#25632` into 2015.8
- #26224: (cachedout) Cleanup of a few cases to move to salt.utils.fopen
- #26260: (nmadhok) Correct spelling of integration in docs
- #26226: (rallytime) Fix `#25463`
- #26248: (nmadhok) Initial commit of unit tests for vmware cloud driver
- #26228: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- #26244: (nmadhok) Backport additions to VMware cloud driver from develop to 2015.8 branch
- #26235: (sjorge) salt.utils.is_smartos_zone, inverse of is_smartos_globalzone
- #26221: (sjorge) SmartOS grain fixes
- #26218: (terminalmage) Add warning about file.recurse unicode errors with vim swap files.
- #26214: (rallytime) Back-port #24878 to 2015.8
- #26211: (techhat) Move SPM to its own directory
- #26197: (TronPaul) Fix GitFS when whitelisting base
- #26200: (anlutro) Make it possible to run salt-cloud as current user
- #26201: (kev009) Avoid VBOX storage emulation bugs in FreeBSD disks grain
- #26188: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- #26194: (basepi) Allow virtual grains to be generated even if virt-what is not available
- #26176: (rallytime) Back-port #26165 to 2015.8
- #26169: (terminalmage) Fix attribute error in gitfs' find_file functions
- #26170: (nmadhok) [Backport] Make sure variable is a dictionary before popping something from it.
- #26143: (nmadhok) VMware cloud driver fixes [forward port from 2015.5 into 2015.8]
- #26173: (jacobhammons) Updates to cloud docs for the provider > driver change
- #26125: (evverx) Use timedatectl set-timezone to tzsetting if available
- #26145: (sjorge) smartos_imgadm cleanup
- #26148: (terminalmage) Refactor winrepo support
- #26128: (sjorge) imgadm.avail should return multiple results
- #26109: (jfindlay) fix quote indent
- #26089: (anlutro) User state/module: fix coercing of None into string `None` in GECOS
- #26081: (cachedout) Move invocation routine up
- #26086: (rallytime) Back-port #26019 to 2015.8
- #26087: (rallytime) Back-port #26059 to 2015.8
- #26052: (jtand) Rh_ip fix
- #26078: (cachedout) Fix missing key in error return
- #26074: (basepi) [2015.8] Re-apply #25358 in 2015.8
- #26069: (jfindlay) fix win_firewall.delete_rule
- #26066: (s0undt3ch) [2015.8] Update to latest bootstrap stable release v2015.06.08
- #26049: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- #26026: (anlutro) Fix httppasswd result false positive in test mode
- #26037: (rallytime) Back-port #25489 to 2015.8
- #26004: (techhat) Allow updating a single SPM repo at a time
- #26012: (cachedout) Merge kwargs into opts for tcp client
- #26007: (anlutro) file.managed: wrap os.remove in if isfile, don't remove on success
- #26009: (terminalmage) Add winrepo and dockerng information to 2015.8.0 release notes
- #26006: (basepi) Revert #25727 in favor of #25645
- #26001: (cachedout) Fix failing tests
- #25978: (anlutro) Correct service state changes in test mode
- #25982: (sjorge) salt.modules.smartos_* limit to global zone only
- #25989: (rallytime) Back-port #25832 to 2015.8
- #25988: (cachedout) Move #25642 to 2015.8
- #25999: (s0undt3ch) Include subschema defaults
- #25997: (s0undt3ch) Allow getting a defaults dictionary from schema defaults
- #25979: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- #25902: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- #25956: (anlutro) Fix user argument to cron functions
- #25946: (sjorge) Fix for salt.utils.decorators under esky
- #25957: (anlutro) Remove temporary file after file.managed with checkcmd
- #25874: (rallytime) Back-port #25668 to 2015.8
- #25929: (sjorge) salt.module.pkgin's __virtual__() should not return None if pkg_info is not present
- #25952: (garethgreenaway) Log when event.fire and event.fire_master fail 2015.8
- #25944: (sjorge) Smartos libcrypto nonesky fix
- #25906: (dmurphy18) Cherry-pick of pkgbuild changes from develop branch
- #25925: (sjorge) Create default log location in smartos esky buildscript
- #25928: (cachedout) Fix stacktrace for non-existant states
- #25922: (jacksontj) Correct max_wait -> max_auth_wait in MultiMinion
- #25907: (rallytime) Back-port #25892 to 2015.8
- #25910: (terminalmage) Pass osarch to check_32()
- #25849: (basepi) Repress template error for GPG renderer (can't seek an OrderedDict)
- #25868: (rallytime) Back-port #25404 to 2015.8
- #25896: (cachedout) Lint
- #25876: (jacksontj) Fixes for 2015.8
- #25867: (rallytime) Back-port #25370 to 2015.8
- #25845: (jacobhammons) updated versionadded
- #25836: (jacksontj) Keep track of SyncWrapper's IOLoop usage
- #25859: (0xf10e) warn_until(Carbon,...) instead of Boron
- #25505: (0xf10e) Glance state module for 2015.8 ”Beryllium”
- #25843: (jand) Fixed a lint error in parsers.py
- #25835: (techhat) spm update_repo doesn't always require arguments
- #25837: (jacobhammons) regenerated man pages
- #25830: (sjorge) Loading of libcrypto on smartos esky fixed
- #25808: (jfindlay) add highstate opts to config/__init__.py, update docs
- #25820: (sjorge) Prerequisite to fix the smartos libcrypto loading
- #25781: (anlutro) Fix iptables.build_rule
- #25764: (gtmanfred) allow use of cloudnetworks in ssh_interface
- #25736: (jfindlay) insert explicit formatter number
- #25742: (rallytime) Back-port #25731 to 2015.8
- #25741: (rallytime) Back-port #25727 to 2015.8
- #25712: (cachedout) Fix outputter for state.apply
- #25698: (rallytime) Back-port #25659 to 2015.8
- #25690: (anlutro) Fix highstate duration alignment (again)
- #25684: (davidjb) Fix doc around Include/Exclude for states
- #25549: (techhat) Switch Scaleway to salt.utils.cloud.bootstrap()
- #25667: (jfindlay) add 2015.8.0rc2 autogenerated changelog
- #25653: (anlutro) Properly align highstate duration sum
- #25663: (rallytime) Back-port #25638 to 2015.8
- #25639: (terminalmage) Don't do pre-flight check on git_pillar if it is not configured
- #25587: (cachedout) Fix prereq in salt.state
- #25628: (anlutro) Highstate output: show duration in seconds instead of milliseconds when appropriate
- #25631: (basepi) Remove trailing whitespace
• #25627: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• #25626: (basepi) Fix the highstate outputer if `duration` is not present
• #25601: (terminalmage) Fix error message when local bin pkg path is not absolute
• #25595: (terminalmage) Bring git_pillar up to feature parity with gitfs
• #25619: (cachedout) Lint stateconf changes
• #25578: (davidjb) Allow parent relative includes in state files
• #25610: (s0undt3ch) [2015.8] Update the bootstrap script to latest release v2015.07.22
• #25599: (jfindlay) fix transport settings in #25596
• #25596: (jfindlay) Tcp test
• #25591: (garethgreenaway) Return data for scheduled jobs in 2015.8 default to True.
• #25588: (basepi) Fix some of the retcode work from #23105
• #25583: (jtand) Fixed lint error where pprint wasn’t imported.
• #25572: (rallytime) Back-port #25570 to 2015.8
• #25575: (rallytime) Make Sure Scaleway driver works with deprecation paths
• #25564: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• #25566: (techhat) Fix download process for SPM repo updates
• #25553: (techhat) Switch SoftLayer to salt.utils.cloud.bootstrap()
• #25552: (techhat) Update pricing for SoftlayerHW
• #25547: (techhat) Switch Parallels to salt.utils.cloud.bootstrap()
• #25548: (techhat) Switch Proxmox to salt.utils.cloud.bootstrap()
• #25543: (techhat) Switch GCE to salt.utils.cloud.bootstrap()
• #25546: (techhat) Switch CloudStack to salt.utils.cloud.bootstrap()
• #25558: (cachedout) Lint config_test
• #25515: (s0undt3ch) salt.utils.schema fixes
• #25514: (garethgreenaway) fixes to schedule.add documentation in 2015.8
• #25508: (s0undt3ch) [2015.8] Update bootstrap script to latest stable release, v2015.07.17
• #25501: (basepi) Add optional job end time to the local_cache returner
• #25491: (s0undt3ch) Let’s call it for what it is!
• #25462: (rallytime) Wrap is_profile_configured calls in try/except block
• #25439: (rallytime) Reduce digital_ocean API call frequency
• #25451: (s0undt3ch) Salt-SSH Scan roster bugfixes (And Py3 support)
• #25449: (ruzarowski) Exclude dotfiles and directories from minion key lists (Fixes `#25448`_)
- #25409: (rallytime) Back-port #24422 to 2015.8
- #25394: (rallytime) Back-port #25355 to 2015.8
- #25393: (rallytime) Back-port #25289 to 2015.8
- #25387: (cachedout) Lint #25319
- #25319: (ruzarowski) [cloud:EC2] Move SourceDest logic to _update_enis and add alias for delete_interface_on_terminate
- #25310: (anlutro) Add an `is list` test to the jinja environment
- #25264: (ruzarowski) Fix AttributeError in fileserver update_opts
- #25372: (rallytime) Don't stacktrace when provisioning instances with softlayer* drivers
- #25315: (ruzarowski) [cloud:EC2] Move handling of AssociatePublicIpAddress to associate_eip/allocate_new_eip logic depending on value type
- #25312: (ruzarowski) [cloud:EC2] Introduce eni Name property to set name tag value after its creation
- #25311: (ruzarowski) [cloud:EC2] Add ability to attach an existing eni
- #25280: (rallytime) Remove deprecation warnings for Beryllium
- #25329: (twangboy) Fixed some documentation errors
- #25300: (s0undt3ch) Fix ordering issue & Added requirements support
- #25283: (jfindlay) ensure ret is always defined
- #25254: (jfindlay) make args optional with default values in win_firewall.delete_rule
- #25257: (notpeter) Document SourceDestCheck added in #25242.
- #25298: (twangboy) Continue if profile not found
- #25296: (twangboy) Fixed file.comment for windows
- #25254: (rallytime) Change versionadded/changed references from Beryllium to 2015.8.0
- #25285: (thusoy) Remove error logging of missing victorops keys
- #25266: (ruzarowski) cloud: EC2 eni property SourceDestCheck is a AttributeBooleanValue
- #25216: (jfindlay) replace shell code with native python code
- #25278: (rallytime) Don’t require size for all cloud drivers when checking profile configs
- #25271: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- #25263: (techhat) Allow non-standard HTTP requests on tornado
- #25253: (s0undt3ch) Remove the deprecation warning. The driver has been renamed.
- #25248: (techhat) Do not resize while iterating
- #25244: (rallytime) Remove parted deprecations and fix failing tests
- #25242: (ruzarowski) Make SourceDestCheck flag available to network interface definition
- #25226: (nmadhok) Backporting fix for issue `#25223` on 2015.8 branch
- #25234: (krak3n) Fix: Bug in boto_asg state argument passing to boto_asg module
- #25222: (rallytime) Back-port #25219 to 2015.8
- #25188: (rallytime) Use linode status descriptions instead of ints when logging status to CLI
- #25203: (s0undt3ch) Added DictConfig with tests & More tests
• #25189: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• #25184: (rallytime) Back-port #25126 to 2015.8
• #25172: (s0undt3ch) Comment out imports while the YAML and RST rendering is not in-place.
• #25158: (s0undt3ch) Comment out not implemented code
• #25145: (s0undt3ch) Implement oneOf, anyOf, allOf and not with unit tests
• #25140: (s0undt3ch) Make the detection code work under Python 3.4
• #25131: (s0undt3ch) Array support in salt.utils.config
• #25130: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8

The 2015.8.0 feature release of Salt contains several major new features. As usual the release notes are not exhaustive and primarily include the most notable additions and improvements. Hundreds of bugs have been fixed and many modules have been substantially updated and added.

New SaltStack Installation Repositories

SaltStack now provides installation repositories for several platforms, with more to come. See the following links for instructions:

- Red Hat / CentOS 5, 6, 7
- Debian 8
- Windows
- FreeBSD

Send Event on State Completion

A fire_event global state keyword argument was added that allows any state to send an event upon completion. Useful for custom progress bars and checking in on long state runs. See fire_event.

ZeroMQ socket monitoring

If zmq_monitor is enabled, log all ZMQ events for socket monitoring purposes. Verbose, but useful.

SPM (Salt Package Manager)

Allows Salt formulas to be packaged for ease of deployment. See spm.

Note: The spm executable was not included in the Debian or Ubuntu packages for the 2015.8.0 or the 2015.8.1 releases. This executable will be included in an upcoming release. As a workaround, copy the SPM script from the salt library installation into /usr/local/bin or your local equivalent.

Specify a Single Environment for Top Files

A new default_top option was added to load the state top file from a single, specific environment, rather than merging top data across all environments. Additionally, new top_file_merge_strategy and env_order options were added for more control over top file merging. See The Top File.
Tornado TCP Transport

Implemented a pure-TCP transport, in addition to ZeroMQ and RAET. The new transport uses Tornado, which allows Salt to use a standardized set of libraries for asynchronous behavior, which should greatly improve reliability and performance.

Note: Tornado is considered experimental in this release. The following known issues were being investigated at the time of release:

- TCP tests show performance degradation over time (issue 26051)
- TCP transport stacktrace on windows minion: Future exception was never retrieved (issue 25718)
- [freebsd] TCP transport not working in 2015.8.0rc3 (issue 26364)

Proxy Minion Enhancements

Proxy Minions have undergone a significant overhaul in 2015.8, see Proxy Minion Enhancements.

Engines

Salt engines are long-running, external processes that leverage Salt. See Salt Engines.

Core Changes

- Add system version info to versions_report, which appears in both salt --versions-report and salt '*' test.versions_report. Also added is an alias test.versions to test.versions_report. (issue 21906)
- Add colorized console logging support. This is activated by using %(colorlevel)s, %(colormsg)s in log_fmt_console in the config file for any of salt-master, salt-minion, and salt-cloud.

Git Pillar

The git external pillar has been rewritten to bring it up to feature parity with gitfs. Support for pygit2 has been added, bringing with it the ability to access authenticated repositories.

Using the new features will require updates to the git ext_pillar configuration, further details can be found in the pillar.git_pillar docs.

Salt Cloud Improvements

- Pricing data from several cloud providers (GCE, DigitalOcean, SoftLayer_HW, EC2)
- All cloud providers now use standardized bootstrapping code.
- Modified the Linode Salt Cloud driver to use Linode's native API instead of depending on apache-libcloud or linode-python.
Salt Cloud Changes

- Changed the default behavior of `rename_on_destroy` to be set to `True` in the EC2 and AWS drivers.
- Changed the default behavior of the EC2 and AWS drivers to always check for duplicate names of VMs before trying to create a new VM. Will now throw an error similarly to other salt-cloud drivers when trying to create a VM of the same name, even if the VM is in the `terminated` state.
- When querying for VMs in `digital_ocean.py`, the number of VMs to include in a page was changed from 20 (default) to 200 to reduce the number of API calls to Digital Ocean.Ocean.

State and Execution Module Improvements

- New and improved Docker state and execution modules (`state` and `execution module`).

Git State and Execution Modules Rewritten

The git state and execution modules have gone through an extensive overhaul.

Changes in the `git.latest` State

- The `branch` argument has been added, allowing for a custom branch name to be used in the local checkout maintained by the `git.latest` state. This can be helpful in avoiding ambiguous refs in the local checkout when a tag is used as the `rev` argument. If no `branch` is specified, then the state uses the value of `rev` as the branch name.
- The `always_fetch` argument no longer has any effect, and will be removed in a future release. The state now detects whether or not a fetch is needed based on comparisons made between the local and remote repositories.
- The `force_fetch` argument has been added to force a fetch if the fetch is not a fast-forward (for instance, if someone has done a reset and force-pushed to the remote repository).
- The `remote_name` argument has been deprecated and renamed to `remote`.
- The `force` argument has been deprecated and renamed to `force_clone` to reduce ambiguity with the other ```force``` arguments.
- Using SHA1 hashes (full or shortened) in the `rev` argument is now properly supported.
- Non-fast-forward merges are now detected before the repository is updated, and the state will not update the repository if the change is not a fast-forward. Non-fast-forward updates must be overridden with the `force_reset` argument. If `force_reset` is set to `True`, the state will only reset the repository if it cannot be fast-forwarded. This is in contrast to the earlier behavior, in which a hard-reset would be performed every time the state was run if `force_reset` was set to `True`.
- A `git pull` is no longer performed by this state, dropped in favor of a fetch-and-merge (or fetch-and-reset) workflow.

`git.config_unset` state added

This state allows for configuration values (or entire keys) to be unset. See `here` for more information and example SLS.
git.config State Renamed to `git.config_set`

To reduce confusion after the addition of `git.config_unset`, the git.config state has been renamed to `git.config_set`. The old config.get name will still work for a couple releases, allowing time for SLS files to be updated.

In addition, this state now supports managing multivar git configuration values. See here for more information and example SLS.

Initial Support for Git Worktrees in Execution Module

Several functions have been added to the execution module to manage worktrees (a feature new to Git 2.5.0). State support does not exist yet, but will follow soon.

New Functions in Git Execution Module

- `git.config_get_regexp`
- `git.config_unset`
- `git.is_worktree`
- `git.list_branches`
- `git.list_tags`
- `git.list_worktrees`
- `git.merge_base`
- `git.merge_tree`
- `git.rev_parse`
- `git.version`
- `git.worktree_rm`
- `git.worktree_add`
- `git.worktree_prune`

Changes to Functions in Git Execution Module

`git.add`

- `--verbose` is now implied when running the `git add` command, to provide a list of the files added in the return data.

`git.archive`

- Now returns `True` when the `git archive` command was successful, and otherwise raises an error.
- The `overwrite` argument has been added to prevent an existing archive from being overwritten by this function.
- The `fmt` argument has been deprecated and renamed to `format`. 
• Trailing slash no longer implied in `prefix` argument, must be included if this argument is passed.

**git.checkout**

• The `rev` argument is now optional when using `-b` or `-B` in `opts`, allowing for a branch to be created (or reset) using `HEAD` as the starting point.

**git.clone**

• The `name` argument has been added to specify the name of the directory in which to clone the repository. If this option is specified, then the clone will be made within the directory specified by the `cwd`, instead of at that location.

• The `repository` argument has been deprecated and renamed to `url`.

**git.config_get**

• The `setting_name` argument has been deprecated and renamed to `key`.

• The `global` argument has been added, to query the global git configuration

• The `all` argument has been added to return a list of all values for the specified key, allowing for all values in a multivar to be returned.

• The `cwd` argument is now optional if `global` is set to `True`.

**git.config_set**

• The value(s) of the key being set are now returned

• The `setting_name` argument has been deprecated and renamed to `key`.

• The `setting_value` argument has been deprecated and renamed to `value`.

• The `is_global` argument has been deprecated and renamed to `global`.

• The `multivar` argument has been added to specify a list of values to set for the specified key. The `value` argument is not compatible with `multivar`.

• The `add` argument has been added to add a value to a key (this essentially just adds an `--add` to the `git config` command that is run to set the value).

**git.fetch**

• The `force` argument has been added to force the fetch when it is not a fast-forward. This could have been achieved in previous Salt versions by including `--force` in the `opts` argument, this argument is just for convenience and to match the usage of other functions with `force` arguments.

• The `refspecs` argument has been added to allow for one or more `refspecs` to be provided which override the one(s) specified by the `remote.remote_name.fetch` git configuration option.
git.ls_remote

- The repository argument has been deprecated and renamed to remote.
- The branch argument has been deprecated and renamed to ref.
- The opts argument has been added to allow for additional CLI options to be passed to the `git ls-remote` command.

git.merge

- The branch argument has been deprecated and renamed to rev.

git.status

- Return data has been changed from a list of lists to a dictionary containing lists of files in the modified, added, deleted, and untracked states.

git.submodule

- Added the command argument to allow for operations other than update to be run on submodules, and deprecated the init argument. To do a submodule update with `init=True` moving forward, use `command=update opts='--init'`.
- OpenStack Glance API V2 execution module
- Amazon VPC state module
- RallyDev execution module
- BambooHR execution module
- Stormpath execution, state modules
- Remove unused argument `timeout` in `jboss7.status`.
- Deprecate enabled argument in `pkgrepo.managed` in favor of disabled.
- Archive module changes: In the `archive.tar` and `archive.cmd_unzip` module functions, remove the arbitrary prefixing of the options string with `-`. An options string beginning with a `--long-option`, would have uncharacteristically needed its first `-` removed under the former scheme. Also, tar will parse its options differently if short options are used with or without a preceding `-`, so it is better to not confuse the user into thinking they’re using the non-`-` format, when really they are using the with-`-` format.
- Added `__states__` to state modules, for cross-calling states. This enables using existing states when writing custom states. See cross calling states.

Windows Improvements

- Enhanced the windows minion silent installation with command line parameters to configure the salt master and minion name. See Silent Installer Options.
- Improved user management with additional capabilities in the user module for Windows.
- Improved patch management with a new module for managing windows updates (`win_wua`).
- Turned on multi-processing by default for windows in minion configuration.
Windows Software Repo Changes

A next-generation (ng) windows software repo is available for 2015.8.0 and later minions. When using this new repository, the repo cache is compiled on the Salt Minion, which enables pillar, grains and other things to be available during compilation time.

See the Windows Software Repository documentation for more information.

Changes to legacy Windows repository

If you have pre 2015.8 Windows minions connecting to your 2015.8 Salt master, you can continue to use the legacy Windows repository for these Salt minions.

If you were previously using this repository and have customized settings, be aware that several config options have been renamed to make their naming more consistent.

See the Windows Software Repository documentation for more information.

Win System Module

The unit of the timeout parameter in the system.halt, system.poweroff, system.reboot, and system.shutdown functions has been changed from seconds to minutes in order to be consistent with the linux timeout setting. (issue 24411) Optionally, the unit can be reverted to seconds by specifying in_seconds=True.

Other Improvements

- Sanitize sensitive fields in http.query
- Allow authorization to be read from Django and eauth
- Add templating to SMTP returner
- New REST module for SDB
- Added rest_timeout config option and timeout argument to jobs api call
- Provide config options for Raet lane and road buffer count. (Useful for BSD kernels)
- Implemented ZeroMQ socket monitor for master and minion
- Add end time to master job cache for jobs (optional, off by default)
- Tornado is now the default backend for http.request
- Support pillarenv selection as it’s done for saltenv
- salt was updated to use python-crypto version 2.6.1, which removes the dependency on python-m2crypto.

Deprecations

- The digital_ocean.py Salt Cloud driver was removed in favor of the digital_ocean_v2.py driver as DigitalOcean has removed support for APIv1. The digital_ocean_v2.py was renamed to digital_ocean.py and supports DigitalOcean's APIv2.
- The vsphere.py Salt Cloud driver has been deprecated in favor of the vmware.py driver.
- The openstack.py Salt Cloud driver has been deprecated in favor of the nova.py driver.
• The use of `provider` in Salt Cloud provider files to define cloud drivers has been deprecated in favor of using `driver`. Both terms will work until the Nitrogen release of Salt. Example provider file:

```bash
my-ec2-cloud-config:
  id: 'HJGRCILJLKJYG'
  key: 'kdjgsgm;woormgl/aserigkjshasdfgn'
  private_key: /etc/salt/my_test_key.pem
  keyname: my_test_key
  securitygroup: default
  driver: ec2
```

• The use of `lock` has been deprecated and from `salt.utils.fopen`. `salt.utils.fopen` should be used instead.

• The following args have been deprecated from the `rabbitmq_vhost.present` state: `user`, `owner`, `conf`, `write`, `read`, and `runas`.

• The use of `runas` has been deprecated from the `rabbitmq_vhost.absent` state.

• Support for output in `mine.get` was removed. `--out` should be used instead.

• The use of `delim` was removed from the following functions in the `match` execution module: `pillar_pcre`, `pillar`, `grain_pcre`.

Security Fixes

CVE-2015-6918 - Git modules leaking HTTPS auth credentials to debug log

Updated the Git state and execution modules to no longer display HTTPS basic authentication credentials in loglevel debug output on the Salt master. These credentials are now replaced with `REDACTED` in the debug output. Thanks to Andreas Stieger <asteiger@suse.com> for bringing this to our attention.

Major Bug Fixes

• Fixed minion failover to next master on DNS errors (issue 21082)
• Fixed memory consumption in SaltEvents (issue 25557)
• Don’t lookup outside system path in which() util (issue 24085)
• Fixed broken jobs rest api call (issue 23408)
• Fixed stale grains data using in modules (issue 24073)
• Added `ssh_identities_only` config flag for ssh-agent configured environments (issue 24096)
• Fixed `"object has no attribute"` errors for Raet transport (issue 21640)
• Flush event returners before master exit (issue 22814)
• Fix `CommandExecutionError` in grains generation with `lspci` missing (issue 23342)
• Fix salt-ssh against CentOS 7 when `python-zmq` not installed (issue 23503)
• Fix salt-ssh issues related to out-of-date six module (issue 20949)
• Fix salt-ssh thin generation after previous run was interrupted (issue 24376)
• Use proper line endings on Windows with `"file.managed"` w/contents (issue 25675)
• Fixed broken comment/uncomment functions in `file.py` (issue 24620)
• Fixed problem with unicode when changing computer description (issue 12255)
• Fixed problem with chocolatey module not loading (issue 25717)
• Fixed problem adding users to groups with spaces in the name (issue 25144)
• Fixed problem adding full name to user account (issue 25206)
• Fixed gem module stack trace (issue 21041)
• Fixed problem with file.managed when test=True (issue 20441)
• Fixed problem with powershell hanging while waiting for user input (issue 13943)
• Fixed problem where the salt-minion service would not consistently start (issue 25272)
• Fixed problem where pkg.refresh_db would return True even when winrepo.p was not found (issue 18919)
• Could someone please provide end to end example for Proxy Minion with REST (issue 25500)
• Proxy minions stopped working between 2014.7 and 2015.5 (issue 25053)
• Proxy minion documentation includes outdated code sample (issue 24018)
• Proxy Minion documentation missing grains example (issue 18273)
• Improve process management in proxy minion (issue 12024)
• Proxy minion never comes up with message ‘I am XXX and I am not supposed to start any proxies.’ (issue 25908)
• Fixed an issue that caused an exception when using Salt mine from pillar. (issue 11509)

37.2.2 Salt 2015.8.1 Release Notes

Version 2015.8.1 is a bugfix release for 2015.8.0.

Security Fixes

CVE-2015-6941 - win_useradd module and salt-cloud display passwords in debug log

Updated the win_useradd module return data to no longer include the password of the newly created user. The password is now replaced with the string XXX-REDACTED-XXX. Updated the Salt Cloud debug output to no longer display win_password and sudo_password authentication credentials. Also updated the Linode driver to no longer display authentication credentials in debug logs. These credentials are now replaced with REDACTED in the debug output.

CVE-2015-6918 - Git modules leaking HTTPS auth credentials to debug log

Updated the Git state and execution modules to no longer display HTTPS basic authentication credentials in loglevel debug output on the Salt master. These credentials are now replaced with REDACTED in the debug output. Thanks to Andreas Stieger <asteiger@suse.com> for bringing this to our attention.

Major Bug Fixes

• Add support for spm.d/*.conf configuration of SPM (issue 27010)
• Fix proxy grains breakage for non-proxy minions (issue 27039)
• Fix global key management for git state
• Fix passing http auth to util.http from state.file (issue 21917)
• Fix multiprocessing: True in windows (on by default)
- Add pkg.info to pkg modules
- Fix name of serial grain (this was accidentally renamed in 2015.8.0')
- Merge config values from master.d/minion.d.conf files (rather than flat update')
- Clean grains cache on grains sync (issue 19853)
- Remove streamed response for fileclient to avoid HTTP redirection problems (issue 27093)
- Fixed incorrect warning about osrelease grain (issue 27065)
- Fix authentication via Salt-API with tokens (issue 27270)
- Fix winrepo downloads from https locations (issue 27081)
- Fix potential error with salt-call as non-root user (issue 26889)
- Fix global minion provider overrides (issue 27209)
- Fix backward compatibility issues for pecl modules
- Fix Windows uninstaller to only remove .*/bin, salt*, nssm.exe, uninst.exe (issue 27383)
- Fix misc issues with mongo returner.
- Add sudo option to cloud config files (issue 27398)
- Fix regression in RunnerClient argument handling (issue 25107)
- Fix dockerng.running replacing creation hostconfig with runtime hostconfig (issue 27265)
- Fix dockerng.running replacing creation hostconfig with runtime hostconfig (issue 27265)
- Increased performance on boto asg/elb states due to __states__ integration
- Windows minion no longer requires powershell to restart (issue 26629)
- Fix x509 module to support recent versions of OpenSSL (issue 27326)
- Some issues with proxy minions were corrected.

Known Issues:

- Proxy minions currently cannot execute a highstate because of the way the proxymodule is being loaded internally. This will be fixed in a future release.

Changes for v2015.8.0..v2015.8.1

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2015-10-01T04:45:02Z

Total Merges: 200

Changes:

- PR #27584: (jacobhammons) added changes list to 2015.8.1 release notes
- PR #27575: (rallytime) Don't report existing instances as running only if they're actually terminated in EC2
- PR #27573: (basepi) [2015.8] Use the custom yaml serializer for minion_opts for salt-ssh
- PR #27514: (clinta) Recent Versions of OpenSSL don't allow importing incomplete PEMs
- PR #27564: (jacobhammons) Man pages
- PR #27522: (twangboy) Removed dependency on powershell to restart salt-minion
• PR #27550: (rallytime) [2015.8] Clean up salt-cloud logging and make it more useful
• PR #27517: (jacobhammons) Updated install docs
• PR #27526: (eliasp) Add missing newlines before param listing to fix doc rendering
• PR #27525: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #27513: (terminalmage) Fix integration tests for worktree addition in git >= 2.6
• PR #27510: (rallytime) Merge #27475 with test fixes
• PR #27451: (ticosax) [dockerng] Enforce usage of host_config and require docker-py>=1.4.0
• PR #27461: (cachedout) Only clean context if it exists
• PR #27473: (terminalmage) salt.utils.gitfs: Don't use close_fds=True on Windows
• PR #27496: (blueyed) Fix version reporting of gitpython
• PR #27502: (ticosax) Add test to check we don't call inspect_image on absent images.
• PR #27497: (blueyed) dockerng: fix image_present for forced, non-existent image
• PR #27411: (terminalmage) Fix invocation of git.config_get and git.config_set
• PR #27477: (terminalmage) Don't append role to hash_cachedir
• PR #27474: (whiteinge) Add fake pymongo version attribute for the docs
• PR #27466: (blueyed) Fix version reporting of python-gnupg and mysql-python
• PR #27465: (ticosax) Fix usage of dockerng `cmd" was #27459
• PR #27417: (whiteinge) Backport #25243 into 2015.8
• PR #27423: (dmurphy18) Changes to support configurable repository for Debian / Ubuntu
• PR #27428: (rallytime) Back-port #27398 to 2015.8
• PR #27429: (rallytime) Back-port #27344 to 2015.8
• PR #27450: (ticosax) [dockerng] Fix typo in docstring
• PR #27430: (jacksont) Fix bug introduced in eee0291ff8b65ff1e22f4d2447a74aa28a3ce7f
• PR #27418: (terminalmage) Don't always remove dest path in salt.utils.files.rename()
• PR #27383: (twangboy) Uninstaller only removes specific files and dirs
• PR #27416: (rallytime) Back-port #27399 to 2015.8
• PR #27394: (jacksont) Remove streamed response for fileclient to avoid HTTP redirection problems
• PR #27415: (ryan-lane) Backwards compat fixes for pecl module
• PR #27407: (meggiebot) Adding stretch label definition
• PR #27388: (basepi) [2015.8] Fix global provider overrides
• PR #27386: (rallytime) Document tty: True usage in salt-ssh roster file
• PR #27380: (jtand) Skipping Async tests
• PR #27382: (terminalmage) Revert "fixes #27217"_clear_old_remotes clears wrong directory (gitfs)"
• PR #27361: (cro) Correct some issues with proxy minions
• PR #27364: (ruzarowski) SaltCloud[EC2]Fix missing credentials in modify_eni_properties api call
• PR #27349: (jfindlay) add freebsd install docs to release notes

37.2. Previous Releases 2293
• PR #27343: (cachedout) Close io loop before deleting attribute
• PR #27337: (rallytime) [2015.8] Fixup salt-cloud logging
• PR #27332: (terminalmage) Adjust dockerng/dockerio docstrings
• PR #27353: (cachedout) Fix case where var not set in config
• PR #27350: (rallytime) Allow IP-forwarding in GCE driver

- PR #27131: (jacobhammons) Install docs
- PR #27124: (jfindlay) Backport #27123
- PR #27111: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #27122: (terminalmage) Fix broken link to git-config(1) docs
- PR #27115: (jacobhammons) Release docs
- PR #27110: (rallytime) Make sure -Q output is consistent across salt-cloud drivers
- PR #27050: (twangboy) Turned multiprocessing on
- PR #27086: (techhat) Document development of SPM loader modules
- PR #26941: (msteed) Make elasticsearch work as master job cache
- PR #27080: (bechtoldt) [Proposal] Add Github SPM label for issues
- PR #27064: (twangboy) Fixed user docs
- PR #27072: (rallytime) Back-port #26840 to 2015.8
- PR #27060: (cro) Fix grains breakage when hosts are not Linux, Windows, or SunOS
- PR #27051: (rallytime) Back-port #26953 to 2015.8
- PR #26864: (terminalmage) Only do git_pillar preflight checks on new-style git_pillar configs
- PR #26967: (TheBigBear) new URL for windows salt downloads
- PR #26921: (terminalmage) Get rid of error in legacy git pillar when using branch mapping notation
- PR #26923: (rallytime) Code clean up of cloud drivers and files
- PR #27010: (rallytime) Back-port #26988 to 2015.8
- PR #26985: (rallytime) Fix versionadded tag

37.2.3 Salt 2015.8.10 Release Notes

Version 2015.8.10 is a bugfix release for 2015.8.0.

Final Release of Debian 7 Packages

Regular security support for Debian 7 ended on April 25th 2016. As a result, 2016.3.1 and 2015.8.10 will be the last Salt releases for which Debian 7 packages are created.
Mint Linux: Important Post-Upgrade Instructions

As a result of some upstream changes, the os grain on Mint Linux is now being detected as LinuxMint (issue 33295). Run the following command after you upgrade to 2015.8.10 to reset the os grain to Mint and the os_family grain to Debian:

```
salt -G 'os:LinuxMint' grains.setvals "{'os': 'Mint', 'os_family': 'Debian'}"
```

Changes for v2015.8.9..v2015.8.10

Salt 2015.8.10 includes fixes for the following known issues in 2015.8.9:

- issue 33376: pip state broken in 2015.8.9 with pip <6.0
- PR 33386: Fix traceback in logging for config validation

Since 2015.8.10 includes only two fixes, the 2015.8.9 changes list is included below for convenience:

Changes for v2015.8.8..v2015.8.9

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2016-05-17T17:09:39Z

Total Merges: 145

Changes:

- PR #33293: (twangboy) Fix minion start retry on Windows (2015.8)
- 22c4331 linux_acl: Allow `-` as a separation character in ACL permissions. Fixes `#31270`_ (#33172) (#33305)
- 7a181f2 Handle more ipv6 error as an exception `#33299`_ (#33300)
- eb47a15 Ignore retcode when checking service’s status (#33294)
- PR #33274: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- 4f3596a Add comment for test=true w/o changes ret and add changes dict example (#33254)
- 2a30c48 Update Git Policy docs to match Contribution guide (#33252)
- 056c273 Fix `#33238`_ (#33239)
- 1cd34ab Properly report on invalid gitfs/git_pillar/winrepo repos (#33245)
- PR #33253: (rallytime) Update the release process docs
- 8c2c5b1 update 2015.8.9 release notes (#33251)
- 8ee8ee3 Handle ipv6 error as an exception (#33246)
- 855bed3 Check rendered YAML for invalid keys (#33213)
- 6fb25a8 Make note of files that begin with `._` in master.d or minion.d dirs (#33224)
- a6dc0d2 Gate jnpr imports in salt.proxy.junos.py (#33150)
- 64a89c4 Add docs for the http state (#33222)
- 0a32163 Don’t stacktrace when using --out=highstate at CLI during staterun. (#33215)
- 04d714d propagate opts to salt.util.http call (#33219)
• c8236c0 update 2015.8.9 release notes (#33237)
• PR #33217: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• 730bec1 [2015.8] Merge forward from 2015.5 to 2015.8 (#33207)
• 379b151 Add a fetch when compiling git_pillar for masterless minions (#33204)
• b3805d8 cloud.clouds.ec2: cache each named node (#33164)
• 86db5df Properly handle failed git commands when redirect_stderr=True (#33203)
• a69950d Don't force use of global ssh_config when git identity file is specified (#33152)
• ce07133 update 2015.8.9 release notes (#33198)
• PR #33188: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• e9108e0 add 2015.8.9 release notes (#33161)
• 2d9919e [2015.8] Update to latest bootstrap script v2016.05.10 (#33156)
• 033bef2 Hash fileclients by opts (#33142)
• f520fa3 Back-port #31769 to 2015.8 (#33139)
• PR #33144: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #33140: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• ad607ef If cache_jobs: True is set, populate the local job cache when running salt-call (#33100)
• 64689a6 Fix broken parsing of usermgmt.conf on OpenBSD (#33135)
• 06a382e Add a check that the cmdline of the found proc matches (#33129)
• 10018e9 salt.utils.gitfs: fix formatting for warning messages (#33064)
• d45b599 Fix 33058 (#33099)
• PR #33106: (abednarik) Moved _finger_fail method to parent class.
• 20c7e10 clarify docs that map is designed to be run once, is not stateful (#33102)
• 558561d cloud.query needs to define mapper.opts (#33098)
• PR #33096: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• 22a327b salt-cloud: fix ipv6-only virtual machines (#32865)
• e788f7e modules.npm: do not log npm --version at info level (#33084)
• PR #33081: (jfindlay) ssh docs: install py-2.6 for RHEL 5
• PR #33088: (isbm) Bugfix: Restore boolean values from the repo configuration
• 2c6326f fix tests for file.blockplace to remove newline (#33082)
• PR #32892: (isbm) Resolve Zypper locks on asynchronous calls
• 3e06f23 Add fun_args to scheduled return data (part of "#24237") (#33039)
• 264c0d4 Don’t append a newline when creating new content with blockreplace (#33049)
• 54b783a Pass all data to batch.run() call when using --failhard (#33048)
• 2dbfa55 Display command output when command fails with batch + failhard options (#33050)
• add9199 Allow security_groups kwarg for boto_elb.present to be string or list (#33053)
• 111701c [2015.8] Merge forward from 2015.5 to 2015.8 (#33054)
Salt Documentation, Release 2015.8.12

- 1066063 File and User test fixes for 2015.8 on Fedora23 (#33056)
- f97b5d5 Back-port #33030 to 2015.8 (#33040)
- e90a501 Update the docs for saltutil.find_job to be more clear/accurate (#33017)
- d3d77ce Add saltenv to the cmd.script state function (#33031)
- 343f44 Fix syndic regression (#33021)
- 4bb3ca5 Compare uid and gid instead of name and group (#32674)
- 9ca5b02 Allow batch mode to use verbose option, as well as show_jid. (#32996)
- 81c0fa4 Fixed glusterfs.peered output (#32955)
- 8c70d7a Clarify some arg docs (#32994)
- 00ebae Fix boto_secgroup_test (#32986)
- 3362367 fix user cron on solaris operating systems (#32970)
- 07e38bc salt.log.setup: process user args before format (32976)
- b2d7c81 doc.ref.states.ordering: clarify requisite change (#32934)
- df41d5d mode should default to `text` (#32928)
- f581a82 Remove FileClient class references from docs - it doesn't exist. (#32925)
- 31b96de Update contents_grains option with relevant docs (#32922)
- PR #32926: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- 1cd6a45 specify volume tags in profile configuration (#32908)
- 85ca86d Update docs to warn users that -1 isn't valid for iptables insert state (#32906)
- cb68706 Allow profile options to be specified in provider file when using maps (#32900)
- 1a55fcb Clarify service state opening docs - uses `service' virtualname (#32880)
- PR #32884: (terminalmage) Fix incorrect deprecation notice
- PR #32878: (jacobhammons) added note about updating the bootstrap script in salt-cloud using th...
- PR #32869: (rallytime) Use correct config setting in cloud syndic docs
- PR #32844: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- eb8fb6b Back-port #31139 to 2015.8 (#32868)
- 4bb5545 backport PR #32732 for issue `#23714`_ (#32847)
- 5ea03b Add pyvmomi version warning to Getting Started with VMware docs (#32845)
- 4ff07d0 Pass None as memory limit. (#32841)
- feebe69 Back-port #32813 to 2015.8 (#32839)
- 83dee63 Back-port #299322 to 2015.8 (#32785)
- PR #32787: (rallytime) Back-port #32722 to 2015.8
- PR #32786: (rallytime) Back-port #32703 to 2015.8
- a6a42740 Merge branch `pr-32775` into 2015.8
• cda00f4 Improve documentation on pygit2 versions (#32779)
• 1d6d234 Properly handle minion failback failure. (#32749)
• 3751a27 Document pillar cache options (#32643)
• 35e8af3 modules.win_dacl: consistent case of dacl constants (#32720)
• 2cd0817 Update external auth documentation to list supported matcher. (#32733)
• bba089d Check dependencies type before applying str operations (#32693)
• 3aa0605 Handle when beacon not configured and we try to enable/disable them (#32692)
• PR #32718: (garethgreenaway) Fixes to schedule.list in 2015.8
• PR #32684: (captaininspiration) Fix routes for redhat < 6
• 7cdd512 Handle a couple of arguments better (Azure) (#32683)
• aaa03bc Fix for issue 32523 (#32672)
• 21081b1 Don’t access deprecated Exception.message attribute. (#32556)
• 5d1e9a4 Lower log level for pillar cache (#32555)
• PR #32588: (anlutro) Fix salt-ssh module function call argument type juggling by JSON encoding them
• 5e7edfc yumpkg: Ignore epoch in version comparison for explicit versions without an epoch (#32563)
• fea6056 Fixing critical bug to remove only the specified Host instead of the entire Host cluster (#32640)
• 0477f66 align OS grains from older SLES with current one (#32649)
• 8d46244 Prevent crash if pygit2 package is requesting re-compilation of the ex(...) (#32652)
• PR #32614: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #32616: (rallytime) Back-port #32547 to 2015.8
• 3047471 Fix comments value in salt.states.pkgrepo example (#32604)
• ab9da90 Revert PR #32480 and apply #32314 with fixes / documentation (#32558)
• c84c921 Better log message on minion restart if master couldn’t be reached. (#32576)
• 3c81798 Don’t return None from eval_master (#32555)
• PR #32536: (rallytime) Back-port #31898 to 2015.8
• d12a1c2 Fix binary search and replace (#32542)
• PR #32539: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #32531: (ticosax) [dockerng] Fix support of dockerng.volume_present when no volume is on present.
• 5d73d54 Enhance dockerng.wait() to control success on exit_code and on already stopped containers (#32475)
• 214f01e Bugfix: salt-key crashes if tries to generate keys to the directory w/o write access (#32436)
• 288839f Turn on exc_info when logging failed minion startup (#32515)
• 08a8020 Add ignore_epoch option to pkg.installed/removed/purged states (#32520)
• 492ebfc Isbm zypper list products sles11 crash (#32505)
• ae89882 Clear VCS fsbackend and git_pillar locks on master start (#32480)
• a6482a3 Use win32api to get Total System Memory (#32491)
• PR #32487: *(terminalmage)* Add explanation of nonzero epoch requirement to pkg.installed state documentation

• PR #32482: *(rallytime)* [2015.8] Merge forward from 2015.5 to 2015.8

• f5bd6bd Backport 31164 and 31364 (#32474)

• PR #32450: *(cachedout)* Pass parser options into batch mode

• b29935 Issue `#28706`_: Fix state user.present behavior. (#32448)

• cef3d5 Argument name in docs should match actual arg name (#32445)

• PR #32432: *(ticosax)* [dockerng] Fix Domainname introspection

• PR #32427: *(rallytime)* [2015.8] Merge forward from 2015.5 to 2015.8

• PR #32423: *(jtand)* Update glusterfs_test to be inline with #32312

• PR #32425: *(cachedout)* Fix salt-cloud parallel provisioning

• 51fb2ac FreeBSD supports packages in format java/openjdk7 so the prior commit broke that functionality. Check freebsd/pkg`#1409`_ for more info.

• 709410a Improve git_pillar documentation/logging

• c53efc3 Update master config docs

• PR #32323: *(mcalmer)* fix sorting by latest version when called with an attribute

• PR #32376: *(amontalban)* Fixes saltstack/salt`#28262`_

• 0d9a06b Cleaner deprecation process with decorators

• 6979fda Correctly index glusterfs bricks

• PR #32393: *(jfindlay)* modules.win_timezone: don’t list all zones in debug log

• PR #32372: *(rallytime)* Back-port #32358 to 2015.8

• PR #32392: *(multani)* Fix documentation on boto_asg and boto_elb modules and states

• PR #32373: *(cachedout)* Resolve memory leak in authentication

• PR #32126: *(cro)* Add a couple CLI examples for the highstate outputter.

• PR #32353: *(mcalmer)* Prevent metadata download when listing installed products

• PR #32321: *(abednarik)* Better message when minion fail to start

• PR #32345: *(nmadhok)* [2015.8] Check if profile key exists in *vm_dict*

• PR #32343: *(Ferbla)* Fixed win_wua example documentation

• PR #32360: *(rallytime)* Make sure hash_type is lowercase in master/minion config files

• PR #32361: *(cro)* SDB is no longer experimental

• PR #32336: *(rallytime)* Back-port #28639 to 2015.8

• PR #32332: *(rallytime)* Don’t unsubscribe from open events on the CLI too early on long-running commands

• PR #32333: *(rallytime)* [2015.8] Merge forward from 2015.5 to 2015.8

• PR #32289: *(rallytime)* New salt-cloud instances should not use old hash_type default.

• PR #32291: *(twangboy)* Fix bad output for chocolatey.version (fixes `#14277`_)

• PR #32295: *(rallytime)* Test the contents of `deploy_scripts_search_path` in salt.config.cloud_config

• PR #32315: *(ahusl)* fixing file.managed with requests lib
• PR #32316: (vutny) Update Salt Bootstrap tutorial
• PR #32325: (bdrung) Re-add shebang to ssh-id-wrapper shell script
• PR #32326: (bdrung) Fix typos
• PR #32300: (twangboy) Add documentation to disable winrepo/winrepo_ng
• PR #32288: (terminalmage) use dictupdate.merge instead of dict.update to merge CLI pillar overrides
• PR #32243: (ismb) Ensure latest pkg.info_installed ensure latest
• PR #32268: (ticosax) [dockerng] Improve detection for older versions of docker-py
• PR #32258: (jacobhammons) Replaces incorrect reference to master_alive_check
• PR #32254: (twangboy) Fix Display Name with spaces in win_servermanager
• PR #32248: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #32230: (terminalmage) systemd.py: Support both update-rc.d and chkconfig as managers of sysv services
• PR #32249: (jacobhammons) Fixes windows download paths to account for patch
• PR #32221: (dmurphy18) Fix version check, fix extracting Major and Minor versions from __ver...
• PR #32227: (twangboy) Remove list2cmdline usage from win_service.py
• PR #32239: (anlutro) Add state file name to warning log line
• PR #32215: (DmitryKuzmenko) rhel oscodename
• PR #32217: (jacobhammons) 2015.8.8.2 release notes
• PR #32212: (rallytime) Back-port #32197 to 2015.8
• PR #32211: (rallytime) Back-port #32210 to 2015.8
• PR #32209: (rallytime) Back-port #32208 to 2015.8
• PR #32204: (ticosax) [dockerng] Consider labels carried by the image when comparing user defined labels.
• PR #32186: (rallytime) Add some ”best practices” information to test documentation
• PR #32176: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #32163: (rallytime) Update nacl.config docs to use key value instead of `None`
• PR #32166: (vutny) salt.states.file: correct examples with multiline YAML string
• PR #32168: (rallytime) Lint 2015.8
• PR #32165: (terminalmage) Make __virtual__ for rhservice.py more robust
• PR #32160: (cachedout) Fix beacon tutorial docs
• PR #32145: (paclat) fixes 29817
• PR #32133: (basepi) Pass eauth user/groups through salt-api to destination functions
• PR #32127: (rallytime) Add runners to __salt__ docs
• PR #32143: (DmitryKuzmenko) Set auth retry count to 0 if multimaster mode is failover.
• PR #32134: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #32091: (clarkperkins) Fixed the regression in 410da78
• PR #32135: (rallytime) [2015.8] Support multiple valid option types when performing type checks
• PR #31760: (sakateka) SMinion need wait future from eval_master

37.2. Previous Releases 2301
- PR #32106: (jfindlay) update suse master service patch
- PR #32130: (jacobhammons) Added known issues 32004 and 32044 to 2015.8.8 release notes
- PR #32105: (clarkperkins) Fixed invalid deploy_scripts_search_path
- PR #32117: (tomlaredo) Fixed validation type for file_ignore_glob
- PR #32113: (sakateka) Fix log message for AsyncAuth initialization
- PR #32116: (ticosax) Obtain default value of memory_swap from the container.
- PR #32098: (rallytime) Back-port #32083 to 2015.8
- PR #32099: (jacobhammons) 2015.8.8 release docs
- PR #32088: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #32074: (Xiami2012) Fix code for proto args in modules.iptables

- PR #32026: (techhat) Don't require the decode_out file to already exist
- PR #32019: (rallytime) Back-port #32012 to 2015.8
- PR #32015: (ticosax) [dockerng] Fix ports exposition when protocol is passed.
- PR #31999: (jacobhammons) Fixes a doc build exception caused by missing mocks for modules.win_dacl
- PR #31992: (notpeter) salt-cloud: add D2 and G2 EC2 instance types
- PR #31981: (lloydoliver) include rotational disks in grains under linux
- PR #31970: (twangboy) Add apply_template_on_contents for windows
- PR #31960: (aletourneau) fixed ec2 get_console_output
- PR #31958: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
  3934c66 Merge branch `2015.5' into `2015.8'
- PR #31935: (twangboy) Back port nullsoft build script from 2015.8
- PR #31912: (jfindlay) log.mixins: remove extermporaneous .record

37.2.4 Salt 2015.8.11 Release Notes

Version 2015.8.11 is a bugfix release for 2015.8.0.

Returner Changes

- Any returner which implements a save_load function is now required to accept a minions keyword argument. All returners which ship with Salt have been modified to do so.

New Configuration Parameter: rotate_aes_key

- Rotate_aes_key causes Salt to generate a new AES key whenever a minion key is deleted. This eliminates the chance that a deleted minion could continue to eavesdrop on communications with the master if it continues to run after its key is deleted. See the entry in the documentation for `rotate_aes_key`. 
Ubuntu 16.04 Packages

SaltStack is now providing official Salt 2015.8 packages for Ubuntu 16.04.

Changes for v2015.8.10..v2015.8.11

Generated at: 2016-07-14T21:16:18Z

Total Merges: 122

Changes:

- PR #34676: (cachedout) Revert `Modify lodaer global test to use populated dunder``
- PR #34601: (lorenorgordon) Clarifies the proper way to reference states
- bc63f25 Lint 34644 (#34651)
- 5036026 Adjust the mine test a little bit to give it a better chance of success (#34647)
- PR #34642: (jtand) Check that mysqladmin exists before running mysql integration tests
- PR #34618: (jtand) Network state integration test test=True
- PR #34617: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- b90ae40 Add support for edge case when Cmd and Entrypoint can’t be blanked (#34593)
- 12b579c When sorting list actual_data, make it a list (#34590)
- 7d8035 Gate docker unit test to check for docker (#34591)
- ae38c87 Add a bunch of documentation on getting files from other environments (#34560)
- PR #34531: (terminalmage) Support ignore_epoch argument in version comparisons
- PR #34545: (terminalmage) Handle cases where Docker Remote API returns an empty ExecutionDriver
- PR #34546: (rallytime) Rename unit.states.boto_secgroup to unit.states.boto_secgroup_test
- PR #34537: (rallytime) Rename tests.unit.simple to tests.unit.simple_test
- fbab2f8 [2015.8] Update bootstrap script to latest stable (#34527)
- 6b8c76a Prevent many errors in the test suite in loader tests (#34521)
- c29f296c Fix wrong order of retention_policy_exists (#34507)
- PR #34518: (terminalmage) Fix pkg.latest integration test for non-LTS ubuntu
- PR #34513: (cachedout) Lower the log level for modules which cannot be loaded to trace
- PR #34498: (terminalmage) Use -O in the wget example in the bootstrap tutorial for the develop branch
- 3ebba02 Rename some unit test files by adding _test (#34503)
- 8722257 Improve top file merging documentation (#34505)
- 6e2e7c9 Gracefully handle non-XML output in GlusterFS execution module. (#34492)
- 7529945 Use skipTest for network state integration test (#34489)
- 0f387f Update dnsmasq.get_config docs to use correct config_file param. (#34488)
- PR #34462: (terminalmage) Use --always when available to git describe
• PR #34467: (rallytime) Back-port #34457 to 2015.8
• PR #34432: (twangboy) Fix file.append
• PR #34429: (terminalmage) Skip version checking for targeted packages in pkg.latest state
• 0a26459 Forgot reference to inotify (#34455)
• PR #34451: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #34401: (terminalmage) Use rpmdev-vercmp as a fallback for version comparison on RHEL5
• PR #34366: (steverweber) Update service.py
• PR #34426: (cro) Document that inotify is Linux only
• PR #34392: (cro) Clarify that salt-cloud doesn't get installed by bootstrap
• PR #34373: (jand) Network state integration test
• d6af1de Optimize pkg integration tests and add a couple new tests (#34377)
• PR #34368: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• 94e0946 Back-port #34324 to 2015.8 (#34344)
• 11dc020 Making salt-ssh pass proper return codes for jinja rendering errors (#34342)
• f6bd1ad Revert py3modernize lint changes (#34339)
• PR #34306: (ghedo) Fix iptables.flush state: Do not force `filter' table when flushing
• 0c60fea Doc clarifications to file modules, addition of new profile log level to docs, fixed example in dnsmasq (#34323)
• b793426 Remove unnecessarily-disabled sanity check (#34325)
• PR #34335: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• a6d3cc6 Typo in dockerio doc (#34319)
• PR #34312: (rallytime) [2015.8] Update to latest bootstrap script v2016.06.27
• PR #34307: (rallytime) Fix test example in integration testing docs
• PR #34233: (thegoodduke) ipset: fix the comment containing blank
• PR #34257: (rallytime) Use `config_dir' setting instead of CONFIG_DIR in gpg renderer
• PR #34274: (clinta) Don't escape source before calling managed
• PR #34258: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #34093: (terminalmage) Catch CommandExecutionError in pkg states
• PR #34136: (meaksh) Fixed behavior for SUSE OS grains in 2015.8
• 56c7267 fix regression from #33681 which causes pulling a list of s3 objects via s3.query to fail (#34208)
• 02eb331 Fix a pair of gitfs bugs (#34218)
• PR #34182: (rallytime) Handle child PIDs differently depending on the availability of psutils
• 5d3ec31 Clarify pkg.list_repo_pkgs docstring for held packages (#34188)
• 5bca5d4 Change target for dockerng assuming default status to Nitrogen release (#34206)
• PR #34184: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #34176: (rallytime) Back-port #34103 to 2015.8
- PR #34179: (terminalmage) Raise the correct exception when gitfs lockfile is empty
- PR #34178: (terminalmage) Remove unnecessary comment
- 6387d16 fix salt --summary to count not responding minions correctly (#34165)
- e5949ea doc: add missing dot (#34175)
- 47595d6 Typo fix (#34174)
- PR #34077: (rallytime) Add some grains targeting tests
- PR #34142: (isbm) Move log message from INFO to DEBUG.
- 79a719b Update documentation on `refresh` behavior in pkg states (#34100)
- 6d0d52f modules.pkg int tests: skip refresh_db upon error (#34072)
- PR #34069: (rallytime) Add a test to check for disconnected minion messaging
- PR #34048: (terminalmage) RFC: proposed fix for multiple fileserver updates in masterless runs
- PR #34011: (rallytime) Back-port #33948 and #34009 to 2015.8
- bca4371 Fixed a bug in the consul.py module that was preventing services (#34051)
- PR #34045: (jacobhammons) Updated latest release version
- f9bfcde Always make changes to minion config if set (#34020)
- e25da4 More YAML indentation fixes in state module examples (#34030)
- PR #34018: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- 79d940e states.file: fix indentation in YAML examples (#34003)
- 4c7a00 Remove loader test for pam module (#34002)
- PR #33990: (jacobhammons) Adds links to several current Salt-related projects
- PR #33983: (twangboy) Clarify the account_exists parameter
- PR #33951: (jfindlay) modules.gem int tests: more fixes
- PR #33984: (jfindlay) Add docs and tests to disk state
- PR #33985: (rallytime) Write some more simple batch command tests
- 60824 acl.ClientACL: add unit tests (#33684)
- a74f1b8 ZD 762 (#33942)
- PR #33946: (rallytime) Back-port #33698 to 2015.8
- PR #33952: (rallytime) Add base argument to salt-ssh grains wrapper for filter_by func
- 4a80e49 Adds a `"Generated on <timestamp>"` line to the footer of each doc html page in the doc (#33962)
- b3ec39d Correct issue with ping on rotate with minion cache (#33765)
- PR #33888: (jfindlay) random.org checks
- 2dc191 Add connecting_settings to boto_elb state attributes list (#33935)
- 91a2184 Wait for up to a minute for sync_after_install (#33917)
- PR #33877: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #33827: (cachedout) Fix broken locate locating function
- PR #33839: (cachedout) Fix another unit test stacktrace in pkg_resource
• PR #33840: (cachedout) Remove matcher tests
• PR #33836: (cachedout) Fixing more stupid unit tests
• PR #33805: (jfindlay) states.pkg int tests: skip if pkg mgr unavailable
• PR #33808: (jfindlay) fix some problems with the gem module integration tests
• PR #33770: (jfindlay) service state integration tests
• PR #33691: (jtand) Gem integration test
• PR #33777: (sodium-chloride) Fix minor docstring issue of arg being missing
• PR #33759: (cachedout) Catch no minions exception in batch mode
• PR #33719: (cachedout) Catch oserror for race condition
• PR #33712: (meaksh) Fix for groupadd execution module failures in SLES11 systems
• PR #33718: (rallytime) Back-port #33700 to 2015.8
• PR #33727: (terminalmage) Fix git_pillar edge case for remote repos without a master branch
• PR #33728: (jfindlay) Make configurable_test_state configurable in test mode
• PR #33729: (twangboy) Add exclude option to win_servermanager
• PR #33743: (vutny) Debian installation docs: drop section about community-maintained repo
• 56c0a42 Create missing jid dir if it doesn’t exist (#33653)
• PR #33654: (twangboy) Fix win servermanager
• PR #33679: (terminalmage) Only compile the template contents if they evaluate to True
• PR #33685: (jfindlay) modules.cp.get_url: add test for https://
• PR #33581: (dincamihai) Call zypper refresh after adding/modifying a repository
• PR #33681: (rallytime) Back-port #33599 to 2015.8
• PR #33396: (babilen) Issue 33393
• PR #33652: (terminalmage) Lower the log level for failed auths
• PR #33615: (danslimmon) Fix crash on unconnectable MySQL server (resolves `#33582`_)
• PR #33558: (twangboy) Fix win servermanager
• PR #33555: (cachedout) Fix crashing Maintenance process
• PR #33501: (meaksh) unit tests for rpm.checksum() and zypper.download()
• PR #33513: (rallytime) Add a section to the jinja docs about escaping jinja
• PR #33520: (jacobhammons) Updated version numbers in the docs for the 2016.3.0 release
• PR #33507: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #33503: (rallytime) Add docs about minion config file in standalone minion docs
• PR #33474: (cachedout) Fix diskusage beacon
• PR #33465: (meaksh) jobs.exit_success allow to check if a job has executed and exit successfully
• PR #33487: (jtand) Add docstring examples to glance.py and nova.py [2015.8]
• PR #33481: (rallytime) Fix docs about etcd config options and add pillar_opts doc
• PR #33490: (rallytime) Document the postgres.psql_query function
• PR #33480: (jfindlay) states.service: minor doc updates
• 4f96cc1 Return full pending computer name (#33483)
• a89be5e Use six.string_types in jobs runner (#33499)
• PR #33491: (BlaineAtAffirm) fix jobs.list_jobs failing with search_target
• PR #33478: (rallytime) Back-port #32484 to 2015.8
• PR #33457: (rallytime) Make doc formatting consistent and use correct versionadded
  • 1df956 Don't allow a `repo` kwarg for pkgrepo.managed (#33477)
  • b4071b0 Allow for config entry to be a list in a dict for beacons (#33476)
• PR #33469: (meaksh) check the RPM signature of zypper pkg.download packages and report errors
• 00f9090 Add docs about PyYAML's 1024 character limitations for simple keys (#33459)
• 3b12f39 Prevent several minion processes on the same machine (#33464)
• c8b4f33 Make --gpg-auto-import-keys a global param when calling zypper (#33432)
• 0c4e38c Fix the saltutil.wheel function and add integration tests (#33414)
• e4f00f9 Make sure the path we're removing is present first - avoid an OSError (#33440)
• 93fd00b Avoid a syntax error by using " instead of escaped ` (#33443)
• ec60b9c Fix virtual function (#33436)
• PR #33438: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• c9d0de4 Documentation update in file.serialize. (#33421)
• f8a90eb Fix LVM parameter devices as a pure list. Comma seperated lists are c#: (#33398)
• 3989e5b Spelling correction. (#33406)
• 9accb53 Update windows pkg.[install|remove] error logic (#33321)
• 04ac89d Add note about reload_modules functionality for pkg.installed (#33374)
• 637c2af Add note to absolute_imports practice about __future__ import (#33377)
• d35b81d Document how to set the alias file location for alias state (#33380)
• PR #33403: (jacobhammons) 2015.8.10 release notes
• PR #33381: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• 946d27e Fix traceback in logging for config validation (#33386)
• 38fbcf8 Add note about name parameter in git_pillar docs (#33369)
• 4925199 Add win_pkg to list of modules that support "version" in pkg.installed (#33362)
• 7a400a9 Add note to docs about api settings for Hipchat API v2 (#33365)
• 37e1930 Add initscripts, SystemD service units and environment files for Debian (#32857)
• PR #33370: (jacobhammons) Update docs version to 2015.8.9
• PR #33366: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• f248003 Remove mentions of windows not supporting pkgs param (#33361)
• 4f9db07 Update job_cache and keep_jobs docs to be more specific to their behavior (#33328)
• 2f06918 Properly detect newer Linux Mint distros (#33359)
37.2.5 Salt 2015.8.12 Release Notes

Version 2015.8.12 is a bugfix release for 2015.8.0.

Changes for v2015.8.11..v2015.8.12

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2016-08-19T16:06:27Z

Total Merges: 57

Changes:

- PR #35611: (rallytime*) Everything in the sample master config file should be commented out
- PR #35569: (*rallytime) Write test for multiple unless commands where 1st cmd passes and 2nd fails
- PR #35600: (*rallytime) Update release notes for 2015.8.12
- PR #35599: (rallytime) Update release notes for 2015.8.12
- PR #35584: (terminalmage) Update linux_sysctl tests to reflect new context key
- PR #35557: (terminalmage) Add warning about AWS flagging of nmap usage
- PR #35577: (terminalmage) Unit file changes for 2015.8.12, 2016.3.3
- PR #35566: (rallytime) Back-port #35545 to 2015.8
- PR #35545: (hu-dabao) fix-35384, fix cmd.run unless
- PR #35492: (terminalmage) Clarify config.get docstring
- PR #35483: (gtmanfred) use __utils__ in salt.cloud
- PR #35546: (whiteinge) Salt api eauth fail gracefully
- PR #35525: (UtahDave) add missing glob import
- PR #35540: (rallytime) Whitespace fix for 2015.8
• PR #35510: (terminalmage) Better systemd integration
• PR #35513: (cachedout) Might be a good idea to be able to download the software we make
• PR #35302: (Ch3LL) Add job cache test
• PR #35512: (cachedout) Fixup 35419
• PR #35497: (deepakhi) Fixes spacing in requirements files
• PR #35508: (terminalmage) Add Carbon to versionadded for git.diff
• PR #35486: (rallytime) Update bootstrap script to latest stable (2016.08.16)
• PR #35413: (cachedout) Resolve path issues with cp.push
• PR #35476: (cachedout) Fixup SSH bug where sudo without sudo user would break
• PR #35471: (terminalmage) win_pkg: Fix traceback when package is not installed
• PR #35448: (ismb) Add ignore_repo_failure option to suppress zypper's exit code 106 on ...
• PR #35451: (ismb) Bugfix: zypper mod repo unchanged
• PR #35453: (theothergraham) fixes #34279 - disk cache ttl expiry
• PR #35459: (thatch45) Ensure that output for salt-ssh gets back
• PR #35460: (rallytime) [2015.8] Update bootstrap script to latest stable (2016.08.15)
• PR #35442: (cachedout) Fix cp.push_dir pushing empty dirs
• PR #35436: (cachedout) Minor doc fixup
• PR #35132: (sjorge) fixes , causing lots of mayham (onchange) with 2016.3.2 for me
• PR #35394: (rallytime) Back-port #34573 to 2015.8
• PR #34573: (cedwards) Update freebsd.rst
• PR #35359: (terminalmage) Clean up open filehandles
• PR #35339: (ismb) Bugfix: Prevent continuous restart, if a dependency wasn't installed
• PR #35357: (twangboy) Fix file.recurse with clean: True on Windows (2015.8)
• PR #35323: (thatch45) Fix issue with bad error check in salt-vt
• PR #35325: (kev009) Fix freebsd netstat route on fbsd 10+
• PR #35301: (bobrik) Pass port to ssh.check_known_host, closes #35264
• PR #35309: (terminalmage) file.recurse: Do not convert octal mode string to int
• PR #35290: (terminalmage) Resolve a couple bugs in orchestration output
• PR #35211: (cachedout) Alternative sudo users for salt-ssh
• PR #35271: (bobrik) Default state_output_profile to True everywhere, closes #35166
• PR #35233: (terminalmage) Do not attempt to get fqdn_ip{4,6} grains when ipv{4,6} grains are empty
• PR #35202: (multani) doc: fix broken links in the test documentation page
• PR #35236: (rallytime) Back-port #35119 to 2015.8
• PR #35119: (derekmaciel) Assume two EVRs are equal if E and V are equal but one R is missing.
• PR #35240: (derekmaciel) Backport #35225 to 2015.8
• PR #35225: (derekmaciel) Add missing documentation for pkg.installed
• PR #35241: *(terminalmage)* Ensure max recursion in gitfs results in no blob object being returned.

• PR #35245: *(rallytime)* Back-port #35039 to 2015.8

• PR #35039: *(whiteinge)* Add saltenv support to module.run

• PR #35249: *(terminalmage)* Fix regression in git.latest

• PR #35174: *(rallytime)* Back-port #35146 to 2015.8

• PR #35146: *(cachedout)* Don’t discard running beacons config when listing beacons

• PR #34827: *(thatch45)* fix beacon list to include all beacons being processed

• PR #35173: *(rallytime)* Back-port #35135 to 2015.8

• PR #35135: *(rallytime)* Add missing CLI Examples to aws_sqs module funcs

• PR #35145: *(jacobhammons)* doc version update to 2015.8.11, updates to release notes

• PR #35114: *(terminalmage)* Add clarification docs on a common git_pillar misconfiguration

• PR #34768: *(hrumph)* Fixes #34767

• PR #35043: *(rallytime)* Start release notes file for 2015.8.12

• PR #35050: *(terminalmage)* [orchestration] Properly handle runner/wheel funcs which accept a `saltdev` argument

• PR #35066: *(jfindlay)* returners.postgres_local_cache: do not log in __virtual__

• PR #35024: *(bobrik)* Cache systemd unit update check per unit, closes #34927

• PR #35026: *(cachedout)* Expressly deny a minion if a key cannot be found

• PR #35000: *(rallytime)* Back-port #33875 and #34999 to 2015.8

• PR #33875: *(jmesquita)* Fix naive fileserver map diff algorithm

• PR #34994: *(rallytime)* Back-port #34835 to 2015.8

• PR #34835: *(thatch45)* Make the mine and publish combine minion and master opts in salt-ssh

• PR #34991: *(cachedout)* SSH timeout

• PR #34976: *(cachedout)* Refine errors in client

• PR #34831: *(thatch45)* If the thin does not match, then redeploy, don’t error

• PR #34916: *(cachedout)* Master performance improvement

• PR #34911: *(cachedout)* Backport #34906

• PR #34906: *(cachedout)* Set timeout for run_salt in test suite

• PR #34898: *(hrumph)* Stop multiple refreshes during call to pkg.list_upgrades

• PR #34606: *(isbm)* Bugfix: Exit on configuration read (backport)

• PR #34862: *(thatch45)* Fix salt-ssh caching issue

• PR #34869: *(terminalmage)* Fail git.latest states with uncommitted changes when force_reset=False

• PR #34859: *(cachedout)* Fix wheel test

• PR #34822: *(thatch45)* Fix salt-ssh state.high and state.low

• PR #34847: *(cachedout)* Add an option to skip the verification of client_acl users

• PR #34827: *(thatch45)* fix beacon list to include all beacons being processed
• PR #34833: (rallytime) Back-port #28521 to 2015.8
• PR #28521: (gongled) SPM: packaging doesn’t work in Python 2.6. Fixed.
• PR #34823: (rallytime) Back-port #25276 to 2015.8
• PR #25276: (jacobhammons) copy spm.1 man page during setup
• PR #34828: (thatch45) Fix #34648
• PR #34818: (jtand) Skip mysql state test if mysqladmin is not available
• PR #34642: (jtand) Check that mysqladmin exists before running mysql integration tests
• PR #34803: (junovitch) salt/state.py: set `chunk['order'] = 0’ with `order: first`; fixes `#24744`
• PR #34773: (randomed) Bugfix: Startup states on minions are not being written to mysql returner
• PR #34751: (cachedout) Remove unneded config test
• PR #34606: (isbm) Bugfix: Exit on configuration read (backport)
• PR #34754: (cachedout) Disable test
• PR #34741: (rallytime) Back-port #34726 to 2015.8
• PR #34726: (martinhoefling) Always loop over updated keys in non recursive update
• PR #34721: (rallytime) Add output_file option to master config docs
• PR #34689: (Azidburn) fix second run problems with pkg.installed using sources
• PR #34695: (isbm) Bugfix: Zypper pkg.list_products returns False on some empty values (2015.8)

37.2.6 Salt 2015.8.2 Release Notes

Note: A significant orchestrate issue #29110 was discovered during the release process of 2015.8.2, so it has not been officially released. Please use 2015.8.3 instead.

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2015-11-13T17:24:04Z

Total Merges: 378

Changes:
• PR #28730: (garethgreenaway) Fixes to how return_job is handled in the scheduler for the salt master.
• PR #28848: (cro) Lint
• PR #28842: (cachedout) Add transport setting to shell test
• PR #28837: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #28827: (jacksontj) Cleanup virtual_timer in loader
• PR #28836: (cachedout) Cast to dict to fix wheel tests in tcp
• PR #28834: (cachedout) Fix breakage in tcp server
• PR #28804: (cachedout) TCP test fixes
• PR #28826: (basepi) [2015.8] Add new tornado deps to salt-ssh thin
• PR #28759: (jfindlay) simplify stdin use of stdin in at.present state
• PR #28824: (rallytime) Back-port #28778 and #28820 to 2015.8
• PR #28803: (jfindlay) decode strings to utf-8
• PR #28782: (rallytime) Fixes to rabbitmq user state
• PR #28789: (nmadhok) Provide ability to enable/disable customization for newly create VMs using VMware salt-cloud driver
• PR #28768: (mrosedale) 2015.8
• PR #28772: (rallytime) rabbitmq.list_user_permissions returns a dict, not a list. Don't expect a list.
• PR #28775: (rallytime) Back-port #28725 to 2015.8
• PR #28755: (rallytime) Move most vmware driver list_* functions to use salt.utils.vmware functions
• PR #28744: (jfindlay) import gate elementtree
• PR #28758: (jfindlay) remove redundant logic in useradd execution module
• PR #28757: (mbarrien) Bug fix: pip command to not quote spaces in cmd line args
• PR #28764: (multani) Various documentation fixes
• PR #28752: (aboe76) Update openSUSE grain for tumbleweed
• PR #28713: (hexedpackets) Rename consul.list to consul.list_keys.
• PR #28719: (jacobhammons) removed dependencies info from docs
• PR #28709: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #28710: (rallytime) Pass kwargs correctly to _get_group from get_group_id
• PR #28698: (rallytime) Back-port #28530 to 2015.8
• PR #28700: (rallytime) Back-port #28679 to 2015.8
• PR #28695: (s0undt3ch) [2015.8] Update to latest bootstrap script v2015.11.09
• PR #28656: (clarkperkins) `#28526` fixed yumpkg module issue with pkg.installed
• PR #28672: (jfindlay) add OS grain support for SuSE Leap
• PR #28673: (jfindlay) add hidden_opts to mount.mounted
• PR #28667: (cro) saltutil.sync_all should sync proxymodules as well as the rest.
• PR #28665: (jfindlay) fixes to windows execution and state modules
• PR #28660: (techhat) Don’t sign empty regions
• PR #28632: (terminalmage) Fixes/improvements to pkgbuild state/modules
• PR #28658: (techhat) Remove _pkgdb_fun() references
• PR #28653: (rallytime) Provide possible parameters for boto_rds.present engine values
• PR #28649: (bdrung) Fix OS related grains on Debian
• PR #28646: (rallytime) Back-port #28614 to 2015.8
• PR #28647: (rallytime) Back-port #28624 to 2015.8
• PR #28648: (rallytime) Merge branch `2015.5` into `2015.8`
• PR #28638: (anlutro) Salt-SSH: Return more concise error when SSH command fails
• PR #28644: (pass-by-value) Make sure versionchanged is correct
• PR #28615: (The-Loeki) Fixes to FreeBSD pkg
• PR #28613: (cachedout) Add facility to deepcopy bound methods in Py2.6 and apply to grains
• PR #28612: (rallytime) Remove unsupported storage_type argument for parity with boto_rds module
• PR #28611: (rallytime) [2015.8] Be explicit about salt.utils.vmware function calls
• PR #28610: (pass-by-value) Lxc config additions
• PR #28602: (nasenbaer13) Allow setting of custom dimensions in asg alarm specification
• PR #28596: (rallytime) Merge branch `2015.5' into `2015.8'
• PR #28593: (blueeyed) doc: fix typo with salt.states.file: s/preseve/preserve/
• PR #28578: (twangboy) Fixed the script... something got broke...
• PR #28579: (jfindlay) fix __virtual__ returns: tls,uptime mods
• PR #28584: (rallytime) If AssociatePublicIpAddress is set to True, don't auto-assign eip.
• PR #28576: (jacksontj) Only encode the zmq message once
• PR #28587: (cachedout) Reset yaml rendering hooks to avoid leaks
• PR #28581: (basepi) Revert b4875e585a165482c41dcd8987d76b0a71ef1b0
• PR #28573: (jacksontj) Add body to salt.utils.http.query returns
• PR #28564: (s0undt3ch) [2015.8] Update to latest bootstrap script v2015.11.04
• PR #28561: (Oro) Issue '#28527'_boto_rds.create does not work
• PR #28560: (bdrung) Fix various typos
• PR #28550: (jfindlay) check timedatectl errno and return stdout on failure
• PR #28545: (jfindlay) pass on concurrent create of jid_dir in local_cache
• PR #28544: (rallytime) Start moving some vmware.py cloud funcs to utils/vmware.py
• PR #28543: (gtmanfred) clean up changes for pkg.uptodate and supervisord.dead
• PR #28538: (jfindlay) decode path and url to utf-8 in url.create
• PR #28533: (jfindlay) decode highstate error messages to utf-8
• PR #28547: (nmadhok) [Backport] [2015.8] Tasks can be in queued state instead of running
• PR #28535: (techhat) Fail gracefully if 169.254* isn't available
• PR #28536: (cro) Default configuration file for proxy minions.
• PR #28534: (rallytime) Add versionadded directive for vpc_name arg in boto_secgroup.present
• PR #28516: (rallytime) Back-port #28489 to 2015.8
• PR #28506: (basepi) [2015.8] Log minion list for all rosters, at debug level
• PR #28514: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #28502: (cachedout) Lint #28427
• PR #28464: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #28486: (rallytime) Back-port #26945 to 2015.8
• PR #28472: (gtmanfred) overwrite more than one value with names
• PR #28493: (rallytime) Back-port #28492 to 2015.8
• PR #28494: (whiteinge) Fix filter_by passing incorrect parameters to match functions
• PR #28491: (rallytime) Back-port #28388 to 2015.8
• PR #28465: (twangboy) Fix `#12363`_: Password Expiration in Windows
• PR #28485: (nasenbaer13) Fix invalid usage of _get_conn causing `#28484`_
• PR #28454: (sdm24) Fixed nodestruct doc formatting to correctly link to pillar_opts in the master config
• PR #28487: (cachedout) Lint 28456
• PR #28457: (sdm24) Clarified comments for grains/core.py for ip_interfaces, ip4_interfaces...
• PR #28473: (anlutro) Show check_cmd output on failure
• PR #28460: (jtand) Skipped wipefs test if wipefs does not exist on OS
• PR #28426: (terminalmage) pkgbuild.built: make template engine optional
• PR #28422: (cachedout) Handle windows logging on thread_multi [WIP]
• PR #28425: (twangboy) Fix `#13513`_- Reflection
• PR #28417: (rallytime) Add note about azure sdk version to getting started docs
• PR #28410: (jacksontj) Add retries to the zeromq.AsyncReqMessageClient
• PR #28404: (rallytime) Back-port #28395 to 2015.8
• PR #28405: (opdude) Detect legacy versions of chocolatey correctly
• PR #28187: (sjansen) fix at.present
• PR #28375: (merll) Merge pillar includes correctly
• PR #28376: (ryan-lane) Support update of route53 records with multiple values
• PR #28377: (terminalmage) Deprecate `always' in favor of `force' in pkgbuild.built
• PR #28380: (cro) Add missing call for service provider
• PR #28348: (jfindlay) salt.utils.alias informs user they are using a renamed function
• PR #28364: (jtand) In CentOS 5 the .split() causes a stacktrace.
• PR #28361: (rallytime) Back-port #28087 to 2015.8
• PR #28360: (multani) Various documentation fixes
• PR #28370: (rallytime) Back-port #28276 to 2015.8
• PR #28353: (merll) Consider each pillar match only once.
• PR #28334: (anlutro) iptables needs -m comment for --comment to work
• PR #28340: (jfindlay) sdecode file and dir lists in fileclient
• PR #28344: (ryan-lane) Fix iptables state for non-filter tables
• PR #28343: (rallytime) Back-port #28342 to 2015.8
• PR #28330: (rallytime) Back-port #28305 to 2015.8
• PR #28270: (rallytime) Refactor RabbitMQ Plugin State to correctly use test=true and format errors
• PR #28269: (rallytime) Refactor rabbitmq_user state to use test=True correctly
• PR #28299: (rallytime) Add test for availability_zone check to boto_vpc_tests
• PR #28306: (sdm24) Updated the Nodegroup docs to include how to target nodegroups in SLS Jinja
• PR #28308: (rallytime) Firewalld state services should use --add-service, not --new-service
• PR #28302: (DmitryKuzmenko) Always close socket even if there is no stream.
• PR #28282: (keesbos) Fix for __env__ in legacy git_pillar
• PR #28258: (pass-by-value) Add service module for ssh proxy example
• PR #28294: (bechtoldt) correct a bad default value in http utility
• PR #28185: (jtand) Added single package return for latest_version, fixed other bug.
• PR #28297: (cachedout) Lint fix proxy junos
• PR #28210: (terminalmage) Fix for ext_pillar being compiled twice in legacy git_pillar code
• PR #28265: (jfindlay) fix blockdev execution and state modules
• PR #28266: (rallytime) Back-port #28260 to 2015.8
• PR #28253: (rallytime) Back-port #28063 to 2015.8
• PR #28231: (rallytime) Make sure we’re comparing strings when getting images in the DO driver
• PR #28224: (techhat) Optimize create_repo for large packages
• PR #28214: (rallytime) Don’t stacktrace if invalid credentials are passed to boto_route53 state
• PR #28228: (rallytime) Back-port #27562 to 2015.8
• PR #28232: (rallytime) Add documentation to supply the ssh_username: freebsd config to DO docs
• PR #28198: (jacobhammons) Added note regarding missing spm exe on Debian/Ubuntu
• PR #28182: (erchn) Some fixes for nova driver for Rackspace
• PR #28181: (rallytime) Revamp firewalld state to be more stateful.
• PR #28176: (cro) Add ping function
• PR #28167: (The-Loeki) file.serialize needs to add a final newline to serialized files
• PR #28168: (rallytime) Make sure availability zone gets passed in boto_vpc module when creating subnet
• PR #28148: (basepi) [2015.8] Only expand nodegroups to lists if there is a nested nodegroup
• PR #28155: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #28149: (pass-by-value) Add clarification to cloud profile doc about host
• PR #28146: (cachedout) Lint dracr.py
• PR #28141: (rallytime) Don’t use RAM for root disk size in linode.py
• PR #28143: (jtand) Removed blank line at end of chassis.py
• PR #28021: (blueeyed) Handle includes in include_config recursively
• PR #28095: (rallytime) Back-port #28001 to 2015.8
• PR #28096: (rallytime) Back-port #28061 to 2015.8
• PR #28139: (rallytime) Back-port #28103 to 2015.8
• PR #28098: (jacksontj) For all multi-part messages, check the headers. If the header is not ...
• PR #28134: (bernieke) fix unicode pillar values `#3436`_
• PR #28076: (redmcg) Replace option `i` with an explicit queryformat

37.2. Previous Releases

2315
• PR #28119: (jacksontj) Check if the remote exists before casting to a string.
• PR #28105: (jfindlay) add reason for not loading localemod
• PR #28108: (cachedout) Set logfile permissions correctly
• PR #27922: (cro) WIP States/Modules for managing Dell FX2 chassis via salt-proxy
• PR #28104: (pass-by-value) Add documentation for proxy minion ssh
• PR #28020: (DmitryKuzmenko) LazyLoader deepcopy fix.
• PR #27933: (eliasp) Provide all git pillar dirs in opts[pillar_roots]
• PR #28013: (rallytime) Back-port #27891 to 2015.8
• PR #28018: (rallytime) Add example to Writing Grains of how grains can be loaded twice
• PR #28044: (cachedout) #28069 with lint
• PR #28079: (The-Loeki) Fix for trace dump on failing imports for win32com & pythoncom 4 win_task
• PR #28081: (The-Loeki) fix for glance state trace error on import failure
• PR #28066: (jacksontj) Use the generic text attribute, not .body of the handler
• PR #28019: (rallytime) Clean up version added and deprecated msgs to be accurate
• PR #28058: (rallytime) Back-port #28041 to 2015.8
• PR #28055: (rallytime) Back-port #28043 to 2015.8
• PR #28046: (pass-by-value) Add pkg install and remove functions
• PR #28050: (ryan-lane) Use a better method for checking dynamodb table existence
• PR #28042: (jfindlay) fix repo path in ubuntu installation documentation
• PR #28033: (twangboy) Fixed win_useradd.py
• PR #28027: (cro) Make ssh conn persistent.
• PR #28029: (jacobhammons) Updated release notes with additional CVE information
• PR #28022: (jacobhammons) Updated Debian and Ubuntu repo paths with new structure for 2015.8.1
• PR #27983: (rallytime) Pip state run result should be False, not None, if installation error occurs.
• PR #27991: (twangboy) Fix for `#20678`_
• PR #27997: (rallytime) Remove note about pip bug with pip v1 vs pip v2 return codes
• PR #27994: (jtand) Fix schedule_test failure
• PR #27992: (cachedout) Make load beacon config into list
• PR #28003: (twangboy) Fix `#26336`_
• PR #27984: (rallytime) Version added for clean_file option for pkgrepo
• PR #27989: (ryan-lane) Do not try to remove the main route table association
• PR #27982: (pass-by-value) Add example for salt-proxy over SSH
• PR #27985: (jacobhammons) Changed current release to 8.1 and added CVEs to release notes
• PR #27979: (cachedout) Fix regression with key whitespace
• PR #27977: (cachedout) Decode unicode names in fileclient/server
• PR #27981: (jtand) Fixed trailing whitespace lint
- PR #27969: (jeffreyctang) fix parse of { on next line
- PR #27978: (terminalmage) Add note about dockerng.inspect_image usage
- PR #27955: (pass-by-value) Bp 27868
- PR #27953: (The-Loeki) Fix CloudStack cloud for new `driver` syntax
- PR #27965: (ryan-lane) Fail in boto_asg.present if alarms fail
- PR #27958: (twangboy) Added new functionality to win_task.py
- PR #27959: (techhat) Change __opts__ to self.opts
- PR #27943: (rallytime) Back-port #27910 to 2015.8
- PR #27944: (rallytime) Back-port #27909 to 2015.8
- PR #27946: (jtand) Changed grain to look at osmajorrelease instead of osrelease
- PR #27914: (rallytime) Use eipalloc instead of eni in EC2 interface properties example
- PR #27926: (rallytime) Back-port #27905 to 2015.8
- PR #27927: (ryan-lane) Do not manage ingress or egress rules if set to None
- PR #27928: (rallytime) Back-port #27908 to 2015.8
- PR #27676: (ticosax) [dockerng] WIP No more runtime args passed to docker.start()
- PR #27885: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #27882: (twangboy) Created win_task.py module
- PR #27802: (terminalmage) Correct warning logging when update lock is present for git_pillar/winrepo, add runner function for clearing git_pillar/winrepo locks
- PR #27886: (rallytime) Handle group lists as well as comma-separated group strings.
- PR #27746: (anlutro) timezone module: handle timedatectl errors
- PR #27816: (anlutro) Make system.reboot use shutdown -r when available
- PR #27874: (rallytime) Add mention of Periodic Table naming scheme to deprecation docs
- PR #27883: (terminalmage) Work around --is-ancestor not being present in git-merge-base before git 1.8.0
- PR #27877: (rallytime) Back-port #27774 to 2015.8
- PR #27878: (rallytime) Use apache2ctl binary on SUSE in apache module
- PR #27879: (cro) Add docs for 2015.8.2+ changes to proxies
- PR #27731: (cro) Add __proxy__ to replace opts['proxymodule']
- PR #27745: (anlutro) Add pip_upgrade arg to virtualenv.managed state
- PR #27809: (ticosax) [dockerng] Remove dockerng.ps caching
- PR #27859: (ticosax) [dockerng] Clarify doc port bindings
- PR #27748: (multani) Fix `#8646`_
- PR #27850: (rallytime) Back-port #27722 to 2015.8
- PR #27851: (rallytime) Back-port #27771 to 2015.8
- PR #27833: (jfindlay) decode path before string ops in fileclient
- PR #27837: (jfindlay) reverse truth in python_shell documentation
• PR #27860: (flavio) Fix OS related grains on openSUSE and SUSE Linux Enterprise
• PR #27768: (rallytime) Clean up bootstrap function to be slightly cleaner
• PR #27797: (ismb) Zypper module clusterfix
• PR #27849: (rallytime) Don’t require a size parameter for proxmox profiles
• PR #27827: (techhat) Add additional error checking to SPM
• PR #27826: (martinhoefling) Fixes `#27825`
• PR #27824: (techhat) Update Azure errors
• PR #27795: (eguven) better change reporting for postgres_user groups
• PR #27799: (terminalmage) Fix usage of identity file in git.latest
• PR #27717: (pass-by-value) Proxy beacon example
• PR #27793: (anlutro) update code that changes log level of salt-ssh shim command
• PR #27761: (terminalmage) Merge git pillar data instead of using dict.update()
• PR #27741: (ticosax) [dockerng] pass filters argument to dockerng.ps
• PR #27760: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #27757: (jfindlay) fix virtual fcn return doc indentation

• PR #27633: (rallytime) Back-port #27559 to 2015.8
• PR #27579: (rallytime) Change boto_route53 region default to `universal' to avoid problems with boto library
• PR #27581: (tkwilliams) Add support for `vpc_name' tag in boto_secgROUP module and state
• PR #27624: (nasenbaer13) Wait for sync is not passed to boto_route53 state
• PR #27614: (blueeyed) doc: minor fixes to doc and comments
• PR #27627: (eyi) Fix crash in boto_asg.get_instances if the requested attribute is None
• PR #27616: (jacobhammons) Updated windows software repository docs
• PR #27569: (lomeroe) boto_vpc.get_subnet_association now returns a dict w/key of vpc_id, a...
• PR #27567: (whiteinge) Use getattr to fetch psutil.version_info
• PR #27583: (tkwilliams) Fixup zypper module
• PR #27597: (blueeyed) gifs: remove unused variable `bad_per_remote_conf"
• PR #27585: (ryan-lane) Fix undefined variable in cron state module

37.2.7 Salt 2015.8.3 Release Notes

Security Fix

CVE-2015-8034: Saving state.sls cache data to disk with insecure permissions

This affects users of the state.sls function. The state run cache on the minion was being created with incorrect permissions. This file could potentially contain sensitive data that was inserted via jinja into the state SLS files. The permissions for this file are now being set correctly. Thanks to @zmalone for bringing this issue to our attention.

Changes

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2015-11-25T00:3:40Z

Merges: 452

Changes:
• PR #29172: (basepi) [2015.8] Backport new philips_hue proxy features from develop
• PR #29167: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #29141: (optix2000) Add test case for require: sls with only import statements
• PR #29072: (terminalmage) Several gifs/git_pillar fixes
• PR #29118: (ticosax) [dockerng] Add networking capabilities
• PR #29145: (anlutro) Remove duplicate import of salt.utils.s3
• PR #29148: (lomeroe) correcting parameter calls to boto get_zone/create_zone functions in ...
• PR #29108: (lorendgordon) Enforce length as an int, fixes `#29107`_
• PR #29125: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #29126: (fcrozat) Fix deployment when umask is non-standard

37.2. Previous Releases
• PR #29124: (rallytime) Back-port #28130 to 2015.8
• PR #29076: (RealKelsar) We can't query installed use flags for a non installed pkg
• PR #29097: (rallytime) Back-port #29070 to 2015.8
• PR #29090: (gtmanfred) clean up novaclient module
• PR #29095: (terminalmage) Add warning about pygit2 API instability
• PR #28919: (cro) Update Philips Hue proxy minion to support __proxy__ instead of proxymodule stored in __opts__
• PR #29065: (cachedout) Handle failures inside python’s inspect if a module is reloaded
• PR #29057: (paulnivin) Add local file support for file.managed source list
• PR #29017: (jfindlay) pagerduty runner: adding missing salt.utils import
• PR #29039: (anlutro) Allow passing list of pip packages to virtualenv.managed
• PR #29047: (schwing) Fix salt.modules.gpg.import_key exception: `GPG_1_3_1 referenced before assignment`
• PR #29050: (terminalmage) Make git_pillar global config option docs more prominent
• PR #29048: (nmadhok) Fix incorrect debug log statement
• PR #29024: (jfindlay) cache runner test: add new unit tests
• PR #28967: (cro) Fix some issues with password changes
• PR #29020: (basepi) [2015.8] Add special list-only nodegroup support to salt-ssh
• PR #28970: (terminalmage) Properly handle non-string saltenvs
• PR #28959: (rallytime) Add blade password example and make note of timeout
• PR #29000: (kiorky) [Mergeable] Fix up LXC
• PR #29014: (jfindlay) systemd module: remove unneeded col command
• PR #28983: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #28969: (rallytime) Back-port #28825 to 2015.8
• PR #28787: (chrigl) closes `#28784`_
• PR #28944: (rallytime) The ret result must contain `name`, not `chassis_name` for the state compiler.
• PR #28957: (terminalmage) Fix version number for new state option
• PR #28950: (DmitryKuzmenko) PR 28812 which test fix
• PR #28812: (ismb) Enhance `which` decorator reliability
• PR #28934: (terminalmage) git.latest: Add update_head option to prevent local HEAD from being updated
• PR #28937: (rallytime) Update dellchassis state example to use correct jinja syntax
• PR #28889: (jfindlay) state compiler: relax aggregate conditional check
• PR #28921: (rallytime) Back-port #25470 to 2015.8
• PR #28922: (rallytime) Change 2015.8.2 release note title to reflect proper version
• PR #28891: (jfindlay) rh_service module: fix logic in _chkconfig_is_enabled
• PR #28892: (jfindlay) grains.core: correctly identify SLES 11 distrib_id
• PR #28910: (lorenengordon) Fix winrepo command in windows pkg mgmt doc
• PR #28896: (rallytime) Back-port #28855 to 2015.8
• PR #28895: (rallytime) Back-port #28823 to 2015.8
• PR #28885: (kt97679) fix for: service.enabled fails on xen server `#28754`
• PR #28880: (terminalmage) Add "profile" loglevel
• PR #28882: (basepi) [2015.8] salt-ssh: Check return type to make sure it's an error
• PR #28867: (rallytime) [fx2 grains] Grains functions should return dictionaries
• PR #28863: (mhogendoorn) Fix ebuild.install causing extra refresh_db calls.
• PR #28865: (jfindlay) add 2015.8.2 release notes
• PR #28730: (garethgreenaway) Fixes to how return_job is handled in the scheduler for the salt master.
• PR #28848: (cro) Lint
• PR #28842: (cachedout) Add transport setting to shell test
• PR #28837: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #28827: (jacksont) Cleanup virtual_timer in loader
• PR #28836: (cachedout) Cast to dict to fix wheel tests in tcp
• PR #28834: (cachedout) Fix breakage in tcp server
• PR #28804: (cachedout) TCP test fixes
• PR #28826: (basepi) [2015.8] Add new tornado deps to salt-ssh thin
• PR #28759: (jfindlay) simplify stdin use of stdin in at.present state
• PR #28824: (rallytime) Back-port #28778 and #28820 to 2015.8
• PR #28803: (jfindlay) decode strings to utf-8
• PR #28782: (rallytime) Fixes to rabbitmq user state
• PR #28789: (nmadhok) Provide ability to enable/disable customization for newly create VMs using VMware salt-cloud driver
• PR #28768: (mrosedale) 2015.8
• PR #28772: (rallytime) rabbitmq.list_user_permissions returns a dict, not a list. Don't expect a list.
• PR #28774: (rallytime) Back-port #28725 to 2015.8
• PR #28775: (rallytime) Back-port #28740 to 2015.8
• PR #28755: (rallytime) Move most vmware driver list_* functions to use salt.utils.vmware functions
• PR #28744: (jfindlay) import gate elementtree
• PR #28758: (jfindlay) remove redundant logic in useradd execution module
• PR #28757: (mbarrini) Bug fix: pip command to not quote spaces in cmd line args
• PR #28764: (multani) Various documentation fixes
• PR #28752: (aboe76) Update openSUSE grain for tumbleweed
• PR #28713: (hexedpackets) Rename consul.list to consul.list_keys.
• PR #28719: (jacobhammons) removed dependencies info from docs
• PR #28709: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #28710: (rallytime) Pass kwargs correctly to _get_group from get_group_id
- PR #28698: (rallytime) Back-port #28530 to 2015.8
- PR #28700: (rallytime) Back-port #28679 to 2015.8
- PR #28695: (s0undt3ch) [2015.8] Update to latest bootstrap script v2015.11.09
- PR #28656: (clarkperkins) `#28526` fixed yumpkg module issue with pkg.installed
- PR #28672: (jfindlay) add OS grain support for SuSE Leap
- PR #28673: (jfindlay) add hidden_opts to mount.mounted
- PR #28667: (cro) saltutil.sync_all should sync proxymodules as well as the rest.
- PR #28665: (jfindlay) fixes to windows execution and state modules
- PR #28660: (techhat) Don't sign empty regions
- PR #28632: (terminalmage) Fixes/improvements to pkgbuild state/modules
- PR #28658: (techhat) Remove _pkgdb_fun() references
- PR #28653: (rallytime) Provide possible parameters for boto_rds.present engine values
- PR #28649: (bdrung) Fix OS related grains on Debian
- PR #28646: (rallytime) Back-port #28614 to 2015.8
- PR #28647: (rallytime) Back-port #28624 to 2015.8
- PR #28648: (rallytime) Merge branch `2015.5` into `2015.8`
- PR #28638: (anlutro) Salt-SSH: Return more concise error when SSH command fails
- PR #28644: (pass-by-value) Make sure versionchanged is correct
- PR #28615: (The-Loeki) Fixes to FreeBSD pkg
- PR #28613: (cachedout) Add facility to deepcopy bound methods in Py2.6 and apply to grains
- PR #28612: (rallytime) Remove unsupported storage_type argument for parity with boto_rds module
- PR #28611: (rallytime) [2015.8] Be explicit about salt.utils.vmware function calls
- PR #28610: (pass-by-value) Lxc config additions
- PR #28602: (nasenbaer13) Allow setting of custom dimensions in asg alarm specification
- PR #28596: (rallytime) Merge branch `2015.5` into `2015.8`
- PR #28593: (blueeyed) doc: fix typo with salt.states.file: s/preseve/preserve/
- PR #28578: (twangboy) Fixed the script... something got broke...
- PR #28579: (jfindlay) fix __virtual__ returns: tls.uptime mods
- PR #28584: (rallytime) If AssociatePublicIpAddress is set to True, don't auto-assign eip.
- PR #28576: (jacksontj) Only encode the zmq message once
- PR #28587: (cachedout) Reset yaml rendering hooks to avoid leaks
- PR #28581: (basepi) Revert b4875e585a165482c4c1ddc8987d76b0a71ef1b0
- PR #28573: (jacksontj) Add body to salt.utils.http.query returns
- PR #28564: (s0undt3ch) [2015.8] Update to latest bootstrap script v2015.11.04
- PR #28561: (Oro) Issue `#28527` _boto_rds.create does not work
• PR #28560: (bdrung) Fix various typos
• PR #28550: (jfindlay) check timedatectl errno and return stdout on failure
• PR #28545: (jfindlay) pass on concurrent create of jid_dir in local_cache
• PR #28544: (rallytime) Start moving some vmware.py cloud funcs to utils/vmware.py
• PR #28543: (gtmanfred) clean up changes for pkg.uptodate and supervisord.dead
• PR #28538: (jfindlay) decode path and url to utf-8 in url.create
• PR #28533: (jfindlay) decode highstate error messages to utf-8
• PR #28547: (nmadhok) [Backport] [2015.8] Tasks can be in queued state instead of running
• PR #28535: (techhat) Fail gracefully if 169.254* isn't available
• PR #28536: (cro) Default configuration file for proxy minions.
• PR #28534: (rallytime) Add versionadded directive for vpc_name arg in boto_secgroup.present
• PR #28516: (rallytime) Back-port #28489 to 2015.8
• PR #28506: (basepi) [2015.8] Log minion list for all rosters, at debug level
• PR #28514: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #28502: (cachedout) Lint #28427
• PR #28464: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #28486: (rallytime) Back-port #26945 to 2015.8
• PR #28472: (gtmanfred) overwrite more than one value with names
• PR #28493: (rallytime) Back-port #28492 to 2015.8
• PR #28494: (whiteinge) Fix filter_by passing incorrect parameters to match functions
• PR #28491: (rallytime) Back-port #28388 to 2015.8
• PR #28465: (twangboy) Fix `#12363`: Password Expiration in Windows
• PR #28485: (nassenbaer13) Fix invalid usage of _get_conn causing `#28484`_
• PR #28454: (sdm24) Fixed nodegroup doc formatting to correctly link to pillar_opts in the master config
• PR #28487: (cachedout) Lint 28456
• PR #28457: (sdm24) Clarified comments for grains/core.py for ip_interfaces, ip4_interface...
• PR #28473: (anlutro) Show check_cmd output on failure
• PR #28460: (jtand) Skipped wipesfs test if wipesfs does not exist on OS
• PR #28426: (terminalmage) pkgbuild.built: make template engine optional
• PR #28422: (cachedout) Handle windows logging on thread_multi [WIP]
• PR #28425: (twangboy) Fix `#13513`_ - Reflection
• PR #28417: (rallytime) Add note about azure sdk version to getting started docs
• PR #28410: (jacksontj) Add retries to the zeromq.AsyncReqMessageClient
• PR #28404: (rallytime) Back-port #28395 to 2015.8
• PR #28405: (opdude) Detect legacy versions of chocolatey correctly
• PR #28187: (sjansen) fix at.present
• PR #28375: (merll) Merge pillar includes correctly
• PR #28376: (ryan-lane) Support update of route53 records with multiple values
• PR #28377: (terminalmage) Deprecate `always' in favor of `force' in pkgbuild.built
• PR #28380: (cro) Add missing call for service provider
• PR #28348: (jfindlay) salt.utils.alias informs user they are using a renamed function
• PR #28364: (jtan) In CentOS 5 the .split() causes a stacktrace.
• PR #28361: (rallytime) Back-port #28087 to 2015.8
• PR #28360: (multani) Various documentation fixes
• PR #28370: (rallytime) Back-port #28276 to 2015.8
• PR #28353: (merll) Consider each pillar match only once.
• PR #28334: (anlutro) iptables needs -m comment for --comment to work
• PR #28340: (jfindlay) sdecode file and dir lists in fileclient
• PR #28344: (ryan-lane) Fix iptables state for non-filter tables
• PR #28343: (rallytime) Back-port #28342 to 2015.8
• PR #28330: (rallytime) Back-port #28305 to 2015.8
• PR #28270: (rallytime) Refactor RabbitMQ Plugin State to correctly use test=true and format errors
• PR #28269: (rallytime) Refactor rabbitmq_user state to use test=True correctly
• PR #28299: (rallytime) Add test for availability_zone check to boto_vpc_tests
• PR #28306: (smd24) Updated the Nodegroup docs to include how to target nodegroups in SLS Jinja
• PR #28308: (rallytime) Firewalld state services should use --add-service, not --new-service
• PR #28302: (DmitryKuzmenko) Always close socket even if there is no stream.
• PR #28282: (keesbos) Fix for __env__ in legacy git_pillar
• PR #28258: (pass-by-value) Add service module for ssh proxy example
• PR #28294: (bechtoldt) correct a bad default value in http utility
• PR #28185: (jtan) Added single package return for latest_version, fixed other bug.
• PR #28297: (cachedout) Lint fix proxy junos
• PR #28210: (terminalmage) Fix for ext_pillar being compiled twice in legacy git_pillar code
• PR #28265: (jfindlay) fix blockdev execution and state modules
• PR #28266: (rallytime) Back-port #28260 to 2015.8
• PR #28253: (rallytime) Back-port #28063 to 2015.8
• PR #28231: (rallytime) Make sure we're compairing strings when getting images in the DO driver
• PR #28224: (techhat) Optimize create_repo for large packages
• PR #28214: (rallytime) Don't stacktrace if invalid credentials are passed to boto_route53 state
• PR #28228: (rallytime) Back-port #27562 to 2015.8
• PR #28232: (rallytime) Add documentation to supply the ssh_username: freebsd config to DO docs
• PR #28198: (jacobhammons) Added note regarding missing spm exe on Debian/Ubuntu
- PR #28182: (erchn) Some fixes for nova driver for Rackspace
- PR #28181: (rallytime) Revamp firewall state to be more stateful.
- PR #28176: (cro) Add ping function
- PR #28167: (The-Loeki) file.serialize needs to add a final newline to serialized files
- PR #28168: (rallytime) Make sure availability zone gets passed in boto_vpc module when creating subnet
- PR #28148: (basepi) [2015.8] Only expand nodegroups to lists if there is a nested nodegroup
- PR #28155: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #28149: (pass-by-value) Add clarification to cloud profile doc about host
- PR #28146: (cachedout) Lint dracr.py
- PR #28141: (rallytime) Don't use RAM for root disk size in linode.py
- PR #28143: (jtand) Removed blank line at end of chassis.py
- PR #28021: (blueeyed) Handle includes in include_config recursively
- PR #28095: (rallytime) Back-port #28001 to 2015.8
- PR #28096: (rallytime) Back-port #28061 to 2015.8
- PR #28139: (rallytime) Back-port #28103 to 2015.8
- PR #28098: (jacksontj) For all multi-part messages, check the headers. If the header is not ...
- PR #28134: (bernieke) fix unicode pillar values `#3436`_
- PR #28076: (redmcg) Replace option `i` with an explicit queryformat
- PR #28119: (jacksontj) Check if the remote exists before casting to a string.
- PR #28105: (jffindlay) add reason for not loading localemod
- PR #28108: (cachedout) Set logfile permissions correctly
- PR #27922: (cro) WIP States/Modules for managing Dell FX2 chassis via salt-proxy
- PR #28104: (pass-by-value) Add documentation for proxy minion ssh
- PR #28020: (DmitryKuzmenko) LazyLoader deepcopy fix.
- PR #27933: (eliasp) Provide all git pillar dirs in opts[pillar_roots]
- PR #28013: (rallytime) Back-port #27891 to 2015.8
- PR #28018: (rallytime) Add example to Writing Grains of how grains can be loaded twice
- PR #28084: (cachedout) #28069 with lint
- PR #28079: (The-Loeki) Fix for trace dump on failing imports for win32com & pythoncom 4 win_task
- PR #28081: (The-Loeki) fix for glance state trace error on import failure
- PR #28066: (jacksontj) Use the generic text attribute, not .body of the handler
- PR #28019: (rallytime) Clean up version added and deprecated msgs to be accurate
- PR #28058: (rallytime) Back-port #28041 to 2015.8
- PR #28055: (rallytime) Back-port #28043 to 2015.8
- PR #28046: (pass-by-value) Add pkg install and remove functions
- PR #28050: (ryan-lane) Use a better method for checking dynamodb table existence
• PR #28042: (jfindlay) fix repo path in ubuntu installation documentation
• PR #28033: (twangboy) Fixed win_useradd.py
• PR #28027: (cro) Make ssh conn persistent.
• PR #28029: (jacobhammons) Updated release notes with additional CVE information
• PR #28022: (jacobhammons) Updated Debian and Ubuntu repo paths with new structure for 2015.8.1
• PR #27983: (rallytime) Pip state run result should be False, not None, if installation error occurs.
• PR #27991: (twangboy) Fix for `#20678`_
• PR #27997: (rallytime) Remove note about pip bug with pip v1 vs pip v2 return codes
• PR #27994: (jtrand) Fix schedule_test failure
• PR #27992: (cachedout) Make load beacon config into list
• PR #28003: (twangboy) Fix `#26336`_
• PR #27984: (rallytime) Version added for clean_file option for pkgrepo
• PR #27989: (ryan-lane) Do not try to remove the main route table association
• PR #27982: (pass-by-value) Add example for salt-proxy over SSH
• PR #27985: (jacobhammons) Changed current release to 8.1 and added CVEs to release notes
• PR #27979: (cachedout) Fix regression with key whitespace
• PR #27977: (cachedout) Decode unicode names in fileclient/server
• PR #27981: (jtrand) Fixed trailing whitespace lint
• PR #27969: (jeffreyctang) fix parse of { on next line
• PR #27978: (terminalmage) Add note about dockerng.inspect_image usage
• PR #27955: (pass-by-value) Bp 27868
• PR #27953: (The-Loeki) Fix CloudStack cloud for new `driver` syntax
• PR #27965: (ryan-lane) Fail in boto_asg.present if alarms fail
• PR #27958: (twangboy) Added new functionality to win_task.py
• PR #27959: (techhat) Change __opts__ to self.opts
• PR #27943: (rallytime) Back-port #27910 to 2015.8
• PR #27944: (rallytime) Back-port #27909 to 2015.8
• PR #27946: (jtrand) Changed grain to look at osmajorrelease instead of osrelease
• PR #27914: (rallytime) Use eipalloc instead of eni in EC2 interface properties example
• PR #27926: (rallytime) Back-port #27905 to 2015.8
• PR #27927: (ryan-lane) Do not manage ingress or egress rules if set to None
• PR #27928: (rallytime) Back-port #27908 to 2015.8
• PR #27676: (ticosax) [dockerng] WIP No more runtime args passed to docker.start()
• PR #27885: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #27882: (twangboy) Created win_task.py module
- PR #27802: (terminalmage) Correct warning logging when update lock is present for git_pillar/winrepo, add runner function for clearing git_pillar/winrepo locks
- PR #27886: (rallytime) Handle group lists as well as comma-separated group strings.
- PR #27746: (anlutro) timezone module: handle timedatectl errors
- PR #27816: (anlutro) Make system.reboot use `shutdown -r` when available
- PR #27874: (rallytime) Add mention of Periodic Table naming scheme to deprecation docs
- PR #27883: (terminalmage) Work around --is-ancestor not being present in git-merge-base before git 1.8.0
- PR #27877: (rallytime) Back-port #27774 to 2015.8
- PR #27878: (rallytime) Use apache2ctl binary on SUSE in apache module
- PR #27879: (cro) Add docs for 2015.8.2+ changes to proxies
- PR #27731: (cro) Add `__proxy__` to replace `opts['proxymodule']`
- PR #27745: (anlutro) Add `pip_upgrade` arg to virtualenv.managed state
- PR #27809: (ticosax) [dockerng] Remove dockerng.ps caching
- PR #27859: (ticosax) [dockerng] Clarify doc port bindings
- PR #27748: (multani) Fix `#8646`
- PR #27850: (rallytime) Back-port #27722 to 2015.8
- PR #27851: (rallytime) Back-port #27771 to 2015.8
- PR #27833: (jfindlay) decode path before string ops in fileclient
- PR #27837: (jfindlay) reverse truth in python_shell documentation
- PR #27860: (flavio) Fix OS related grains on openSUSE and SUSE Linux Enterprise
- PR #27768: (rallytime) Clean up bootstrap function to be slightly cleaner
- PR #27770: (isbm) Zypper module clusterfix
- PR #27849: (rallytime) Don't require a size parameter for proxmox profiles
- PR #27827: (techhat) Add additional error checking to SPM
- PR #27826: (martinhoefling) Fixes `#27825`
- PR #27824: (techhat) Update Azure errors
- PR #27795: (eguven) better change reporting for postgres_user groups
- PR #27799: (terminalmage) Fix usage of identity file in git.latest
- PR #27717: (pass-by-value) Proxy beacon example
- PR #27793: (anlutro) update code that changes log level of salt-ssh shim command
- PR #27761: (terminalmage) Merge git pillar data instead of using dict.update()
- PR #27741: (ticosax) [dockerng] pass filters argument to dockerng.ps
- PR #27760: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #27757: (jfindlay) fix virtual fcn return doc indentation
- PR #27754: (rallytime) Change test.nop version directive to 2015.8.1
- PR #27734: (jacobhammons) Updated saltstack2 theme to add SaltConf16 banner
- PR #27727: (rallytime) Merge #27719 w/pylint fix
- PR #27724: (jfindlay) update __virtual__ return documentation
- PR #27725: (basepi) Fix global injection for state cross calls
- PR #27628: (ticosax) [dockerng] Add support of labels parameter for dockerng
- PR #27704: (jacobhammons) Update compound matcher docs to clarify the usage of alternate delimi...
- PR #27705: (rallytime) Merge #27602 with final pylint fix
- PR #27691: (notpeter) Faster timeout (3s vs 2min) for instance metadata lookups. `#13850`_
- PR #27696: (blueeyed) loader.proxy: call _modules_dirs only once
- PR #27630: (ticosax) Expose container_id in mine.get_docker
- PR #27600: (blueeyed) dockerng: use docker.version=auto by default
- PR #27689: (rallytime) Merge #27448 with test fixes
- PR #27693: (jacobhammons) initial engines topic, updates to windows repo docs
- PR #27601: (blueeyed) dockerng: handle None in container.Names
- PR #27596: (blueeyed) gitfs: fix UnboundLocalError for `msg`
- PR #27651: (eliasp) Check for existence of `subnetId` key in subnet dict
- PR #27639: (rallytime) Docement version added for new artifactory options
- PR #27677: (rallytime) Back-port #27675 to 2015.8
- PR #27637: (rallytime) Back-port #27604 to 2015.8
- PR #27657: (garethgreenaway) Fix to pkg state module
- PR #27632: (rallytime) Back-port #27539 to 2015.8
- PR #27633: (rallytime) Back-port #27559 to 2015.8
- PR #27579: (rallytime) Change boto_route53 region default to `universal` to avoid problems with boto library
- PR #27581: (tkwilliams) Add support for `vpc_name` tag in boto_secgroup module and state
- PR #27624: (nasenbaer13) Wait for sync is not passed to boto_route53 state
- PR #27614: (blueeyed) doc: minor fixes to doc and comments
- PR #27627: (eyj) Fix crash in boto_asg.get_instances if the requested attribute is None
- PR #27616: (jacobhammons) Updated windows software repository docs
- PR #27569: (lomeroe) boto_vpc.get_subnet_association now returns a dict w/key of vpc_id, a...
- PR #27567: (whiteing) Use getattr to fetch psutil.version_info
- PR #27583: (tkwilliams) Fixup zypper module
- PR #27597: (blueeyed) gitfs: remove unused variable `"bad_per_remote_conf"
- PR #27585: (ryan-lane) Fix undefined variable in cron state module
37.2.8 Salt 2015.8.4 Release Notes

Known Issues

in_requisites (issue 30820)

This issue affects all users targeting an explicit -name: <name> with a _in requisite (such as watch_in or require_in). If you are not using explicit -name: <name> arguments, are targeting with the state ID instead of the name, or are not using _in requisites, then you should be safe to upgrade to 2015.8.4.

This issue is resolved in the 2015.8.5 release.

Security Fix

CVE-2016-1866: Improper handling of clear messages on the minion, which could result in executing commands not sent by the master.

This issue affects only the 2015.8.x releases of Salt. In order for an attacker to use this attack vector, they would have to execute a successful attack on an existing TCP connection between minion and master on the pub port. It does not allow an external attacker to obtain the shared secret or decrypt any encrypted traffic between minion and master. Thank you to Sebastian Krahmer <krahmer@suse.com> for bringing this issue to our attention.

We recommend everyone upgrade to 2015.8.4 as soon as possible.

Core Changes

- PR #28994: timcharper Salt S3 module has learned how to assume IAM roles
- Added option mock=True for state.sls and state.highstate. This allows the salt state compiler to process sls data in a state run without actually calling the state functions, thus providing feedback on the validity of the arguments used for the functions beyond the preprocessing validation provided by state.show_sls (issue 30118 and issue 30189).

```
salt '*' state.sls core,edit.vim mock=True
salt '*' state.highstate mock=True
salt '*' state.apply edit.vim mock=True
```

Changes for v2015.8.3..v2015.8.4

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Changes:

- PR #30613: (basepi) Fix minion/syndic clearfuncs
- PR #30609: (seanjnkns) Fix documentation for pillar_merge_lists which default is False, not ...
- PR #30584: (julianbrost) file.line state: add missing colon in docstring
- PR #30589: (terminalmage) Merge 2015.5 into 2015.8
- PR #30599: (multani) Documentation formatting fixes
- PR #30554: (rallytime) Make the salt-cloud actions output more verbose and helpful
• PR #30549: (techhat) Salt Virt cleanup
• PR #30553: (techhat) AWS: Support 17-character IDs
• PR #30532: (whiteinge) Add execution module for working in sls files
• PR #30529: (terminalmage) Merge 2015.5 into 2015.8
• PR #30526: (twangboy) Added FlushKey to make sure it's changes are saved to disk
• PR #30521: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #30485: (jtand) Updated pip_state to work with pip 8.0 on 2015.8
• PR #30494: (isbm) Zypper: info_installed — `errors' flag change to type `boolean'
• PR #30506: (jacksontj) Properly remove newlines after reading the file
• PR #30508: (rallytime) Fix Linode driver cloning functionality
• PR #30522: (terminalmage) Update git.list_worktree tests to reflect new return data
• PR #30483: (borgstrom) Pyobjects recursive import support (for 2015.8)
• PR #30491: (jacksontj) Add multi-IP support to network state
• PR #30496: (anlutro) Fix KeyError when adding ignored pillars
• PR #30359: (kingsquirrel152) Removes suspected copy/paste error for zmq_filtering functionality
• PR #30448: (cournape) Fix osx scripts location
• PR #30457: (rallytime) Remove fsutils references from modules list
• PR #30453: (rallytime) Make sure private AND public IPs are listed for Linode driver
• PR #30458: (rallytime) Back-port #30062 to 2015.8
• PR #30468: (timcharper) make note of s3 role assumption in upcoming changelog
• PR #30470: (whiteinge) Add example of the match_dict format to accept_dict wheel function
• PR #30450: (gtmanfred) fix extension loading in novaclient
• PR #30212: (abednarik) Fix incorrect file permissions in file.line
• PR #29947: (jfindlay) fileclient: decode file list from master
• PR #30363: (terminalmage) Use native `list” subcommand to list git worktrees
• PR #30445: (jtand) Boto uses False for is_default instead of None
• PR #30406: (frioux) Add an example of how to use file.managed/check_cmd
• PR #30424: (isbm) Check if byte strings are properly encoded in UTF-8
• PR #30405: (jtand) Updated glusterfs.py for python2.6 compatibility.
• PR #30396: (pass-by-value) Remove hardcoded val
• PR #30391: (jtand) Added else statements
• PR #30375: (rallytime) Wrap formatted log statements with six.u() in cloud/__init__.py
• PR #30384: (isbm) Bugfix: info_available does not work correctly on SLE 11 series
• PR #30376: (pritambaral) Fix FLO_DIR path in 2015.8
• PR #30389: (jtand) Older versions of ipset don't support comments
• PR #30373: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #30372: (jacobhammons) Updated man pages for 2015.8.4, updated copyright to 2016
• PR #30370: (rallytime) Remove incomplete function
• PR #30366: (rallytime) Back-port #28702 to 2015.8
• PR #30361: (cro) Flip the sense of the test for proxymodule imports, add more fns for esxi proxy
• PR #30267: (isbm) Fix RPM issues with the date/time and add package attributes filtering
• PR #30360: (jfindlay) file.remove, file.absent: mention recursive dir removal
• PR #30221: (mbarrien) No rolcatupdate for user_exist in Postgres>=9.5 `#26845`
• PR #30358: (terminalmage) Add libgit2 version to versions-report
• PR #30346: (pass-by-value) Prevent orphaned volumes
• PR #30349: (rallytime) Back-port #30347 to 2015.8
• PR #30354: (anlutro) Make sure all ignore_missing SLSes are caught
• PR #30356: (nmadhok) Adding code author
• PR #30340: (itand) Updated seed_test.py for changes made to seed module
• PR #30339: (jfindlay) Backport #26511
• PR #30343: (rallytime) Fix 2015.8 from incomplete back-port
• PR #30342: (eliasp) Correct whitespace placement in error message
• PR #30308: (rallytime) Back-port #30257 to 2015.8
• PR #30187: (rallytime) Back-port #27606 to 2015.8
• PR #30223: (serge-p) adding support for DragonFly BSD
• PR #30238: (rallytime) Reinit crypto before calling RSA.generate when generating keys.
• PR #30246: (dmacvicar) Add missing return data to scheduled jobs (`#24237 `
• PR #30292: (thegoodduke) ipset: fix test=true & add comment for every entry
• PR #30275: (abednarik) Add permanent argument in firewalld.
• PR #30328: (cachedout) Fix file test
• PR #30310: (pass-by-value) Empty bucket fix
• PR #30211: (techhat) Execute choot on the correct path
• PR #30309: (rallytime) Back-port #30304 to 2015.8
• PR #30278: (nmadhok) If datacenter is specified in the config, then look for managed objects under it
• PR #30305: (jacobhammons) Changed examples to use the `"example.com"` domain instead of `"mycompan...`
• PR #30249: (mpreziuso) Fixes performance and timeout issues on win_pkg.install
• PR #30217: (pass-by-value) Make sure cloud actions can be called via salt run
• PR #30268: (terminalmage) Optimize file_tree ext_pillar and update file.managed to allow for binary contents
• PR #30245: (rallytime) Boto secgroup/iam_role: Add note stating us-east-1 is default region
• PR #30299: (rallytime) ESXi Proxy minions states are located at salt.states.esxi, not vsphere.
• PR #30202: (opdude) Fixed the periodic call to beacons
• PR #30303: (jacobhammons) Changed notes to indicate that functions are matched using regular ex...
• PR #30284: (terminalmage) salt.utils.gitfs: Fix Dulwich env detection and submodule handling
• PR #30280: (jfindlay) add state mocking to release notes
• PR #30273: (rallytime) Back-port #30121 to 2015.8
• PR #30301: (cachedout) Accept whatever comes into highstate mock for state tests
• PR #30282: (cachedout) Fix file.append logic
• PR #30289: (cro) Fix problems with targeting proxies by grains
• PR #30293: (cro) Ensure we don’t log stuff we shouldn’t
• PR #30279: (cachedout) Allow modules to be packed into boto utils
• PR #30186: (rallytime) Update CLI Examples in boto_ec2 module to reflect correct arg/kwarg positioning
• PR #30156: (abednarik) Add option in file.append to ignore_whitespace.
• PR #30189: (rallytime) Back-port #30185 to 2015.8
• PR #30215: (jacobhammons) Assorted doc bug fixes
• PR #30206: (cachedout) Revert `Fix incorrect file permissions in file.line`
• PR #30190: (jacobhammons) Updated doc site banners
• PR #30180: (jfindlay) modules.x509._dec2hex: add fmt index for 2.6 compat
• PR #30179: (terminalmage) Backport #26962 to 2015.8 branch
• PR #29693: (abednarik) Handle missing source file in ssh_auth.
• PR #30155: (rallytime) Update boto_secgroup and boto_iam_role docs to only use region OR profile
• PR #30158: (rallytime) Move _option(value) calls to __salt__['config.option'] in boto utils
• PR #30160: (dmurphy18) Fix parsing disk usage for line with no number and AIX values in Kilos
• PR #30162: (rallytime) Update list_present and append grains state function docs to be more clear.
• PR #30163: (rallytime) Add warning about using `=` in file.line function
• PR #30164: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #30168: (abednarik) Fix incorrect file permissions in file.line
• PR #30154: (Oro) Fix file serialize on windows
• PR #30144: (rallytime) Added generic ESXCLI command ability to ESXi Proxy Minion
• PR #30142: (terminalmage) Fix dockerng.push, and allow for multiple images
• PR #30075: (joejulian) Convert glusterfs module to use xml
• PR #30129: (optix2000) Clean up _uptodate() in git state
• PR #30139: (rallytime) Back-port #29589 to 2015.8
• PR #30124: (abednarik) Update regex to detect ip alias in OpenBSD.
• PR #30133: (stanislavb) Fix typo in gpgkey URL
• PR #30126: (stanislavb) Log S3 API error message
• PR #30128: (oeufete) Log retryable transport errors as warnings
• PR #30096: (cachedout) Add rm_special to crontab module
• PR #30106: (techhat) Ensure last dir
• PR #30101: *(gtmanfred)* fix bug where nova driver exits with no adminPass
• PR #30090: *(techhat)* Add argument to isdir()
• PR #30094: *(rallytime)* Fix doc formatting for cloud.create example in module.py state
• PR #30095: *(rallytime)* Add the list_nodes_select function to linode driver
• PR #30082: *(abednarik)* Fixed saltversioninfo grain return
• PR #30084: *(rallytime)* Back-port #29987 to 2015.8
• PR #30071: *(rallytime)* Merge branch `2015.5` into `2015.8`
• PR #30067: *(ryan-lane)* Pass in kwargs to boto_secgroup.convert_to_group_ids explicitly
• PR #30069: *(techhat)* Ensure that pki_dir exists
• PR #30064: *(rallytime)* Add Syndic documentation to miscellaneous Salt Cloud config options
• PR #30049: *(rallytime)* Add some more unit tests for the vsphere execution module
• PR #30060: *(rallytime)* Back-port #27104 to 2015.8
• PR #30048: *(jacobhammons)* Remove internal APIs from rest_cherrypy docs.
• PR #30043: *(rallytime)* Be explicit about importing from salt.utils.jinja to avoid circular imports
• PR #30038: *(rallytime)* Back-port #30017 to 2015.8
• PR #30036: *(rallytime)* Back-port #29995 to 2015.8
• PR #30035: *(rallytime)* Back-port #29895 to 2015.8
• PR #30034: *(rallytime)* Back-port #29893 to 2015.8
• PR #30033: *(rallytime)* Back-port #29876 to 2015.8
• PR #30029: *(terminalmage)* git.latest: Fix handling of nonexistent branches
• PR #30016: *(anlutro)* Properly normalize locales in locale.gen_locale
• PR #30015: *(anlutro)* locale module: don’t escape the slash in ‘\n
• PR #30022: *(gqgunhed)* Two minor typos fixed
• PR #30026: *(anlutro)* states.at: fix wrong variable being used
• PR #29966: *(multani)* Fix bigip state/module documentation + serializers documentation
• PR #29904: *(twangboy)* Improvements to osx packaging scripts
• PR #29950: *(multani)* boto_iam: fix deletion of IAM users when using delete_keys=true
• PR #29937: *(multani)* Fix states.boto_iam group users
• PR #29934: *(multani)* Fix state.boto_iam virtual name
• PR #29943: *(cachedout)* Check args correctly in boto_rds
• PR #29924: *(gqgunhed)* fixed: uptime now working on non-US Windows
• PR #29883: *(serge-p)* fix for nfs mounts in `_active_mounts_openbsd`
• PR #29894: *(techhat)* Support Saltfile in SPM
• PR #29856: *(rallytime)* Added some initial unit tests for the salt.modules.vsphere.py file
• PR #29855: *(rallytime)* Back-port #29740 to 2015.8
• PR #29890: *(multani)* Various documentation fixes
- PR #29850: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #29811: (anlutro) influxdb: add retention policy module functions
- PR #29814: (basepi) [2015.8] [Windows] Fix multi-master on windows
- PR #29819: (rallytime) Add esxi module and state to docs build
- PR #29832: (jleimbach) Fixed typo in order to use the keyboard module for RHEL without systemd
- PR #29803: (rallytime) Back-port #29769 to 2015.8
- PR #29767: (abednarik) Hosts file update in mod_hostname.
- PR #29772: (terminalmage) pygit2: skip submodules when traversing tree
- PR #29765: (gtmanfred) allow nova driver to be boot from volume
- PR #29773: (l2ol33rt) Append missing wget in debian installation guide
- PR #29760: (rallytime) Back-port #29769 to 2015.8
- PR #29775: (paulnivin) Change listen requisite resolution from name to ID declaration
- PR #29754: (rallytime) Back-port #29719 to 2015.8
- PR #29713: (The-Loeki) Pillar-based cloud providers still forcing use of deprecated `provider'
- PR #29729: (rallytime) Further clarifications on `unless" and `onlyif" requisites.
- PR #29737: (akissa) fix pillar sqlite3 documentation examples
- PR #29743: (akissa) fix pillar sqlite not honouring config options
- PR #29723: (rallytime) Clarify db_user and db_password kwargs for postgres_user.present state function
- PR #29722: (rallytime) Link `stateful" kwargs to definition of what `stateful" means for cmd state.
- PR #29724: (rallytime) Add examples of using multiple matching levels to Pillar docs
- PR #29726: (cachedout) Disable some boto tests per resolution of moto issue
- PR #29708: (lagesag) Fix test=True for file.directory with recurse ignore_files/ignore_dirs.
- PR #29642: (cachedout) Correctly restart daemonized minions on failure
- PR #29599: (cachedout) Clean up minion shutdown
- PR #29675: (clinta) allow returning all refs
- PR #29683: (rallytime) Catch more specific error to pass the error message through elegantly.
- PR #29687: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #29681: (clinta) fix bare/mirror in git.latest
- PR #29644: (rallytime) Fixed a couple more ESXi proxy minion bugs
- PR #29645: (rallytime) Back-port #29558 to 2015.8
- PR #29632: (jfindlay) reduce severity of tls module __virtual__ logging
- PR #29606: (abednarik) Fixed duplicate mtu entry in RedHat 7 network configuration.
- PR #29613: (rallytime) Various ESXi Proxy Minion Bug Fixes
- PR #29628: (DmitryKuzmenko) Don't create io_loop before fork
- PR #29609: (basepi) [2015.8] [salt-ssh] Add ability to set salt-ssh command umask in roster
- PR #29603: (basepi) Fix orchestration failure-checking
- PR #29597: (terminalmage) dockerng: Prevent exception when API response contains empty dictionary
- PR #29596: (rallytime) Back-port #29587 to 2015.8
- PR #29588: (rallytime) Added ESXi Proxy Minion Tutorial
- PR #29572: (gtmanfred) [nova] use old discover_extensions if available
- PR #29545: (terminalmage) git.latest: init submodules if not yet initialized
- PR #29548: (rallytime) Back-port #29449 to 2015.8
- PR #29547: (rallytime) Refactored ESXCLI-based functions to accept a list of esxi_hosts
- PR #29563: (anlutro) Fix a call to deprecated method in python-influxdb
- PR #29565: (bdrung) Fix typos and missing release note
- PR #29540: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #29499: (rallytime) Initial commit of ESXi Proxy Minion
- PR #29526: (jfindlay) 2015.8.2 notes: add note about not being released
- PR #29531: (jfindlay) grains.core: handle undefined variable
- PR #29538: (basepi) [2015.8] [salt-ssh] Remove umask around actual execution for salt-ssh
- PR #29505: (rallytime) Update boto_rds state docs to include funky yaml syntax for `tags` option.
- PR #29513: (bdrung) Drop obsolete syslog.target from systemd services
- PR #29500: (rallytime) Back-port #29467 to 2015.8
- PR #29463: (abednarik) Add **kwargs to debconf.set.
- PR #29399: (jfindlay) modules.status: add human_readable option to uptime
- PR #29433: (cro) Files for building .pkg files for MacOS X
- PR #29455: (jfindlay) modules.nova.__init__: do not return None
- PR #29454: (jfindlay) rh_service module __virtual__ return error messages
- PR #29476: (tbaker57) Doc fix - route_table_present needs subnet_names (not subnets) as a key
- PR #29487: (rallytime) Back-port #29450 to 2015.8
- PR #29441: (rallytime) Make sure docs line up with blade_idrac function specs
- PR #29440: (rallytime) Back-port #28925 to 2015.8
- PR #29435: (galet) Grains return wrong OS version and other OS related values for Oracle Linux
- PR #29430: (rall0r) Fix host.present state limitation
- PR #29417: (jacobhammons) Repo install updates
- PR #29402: (techhat) Add rate limiting to linode
- PR #29400: (twangboy) Fix #19332
- PR #29398: (cachedout) Lint 29288
- PR #29331: (DmitryKuzmenko) Bugfix - #29116 raet dns error
- PR #29390: (jacobhammons) updated version numbers in documentation
- PR #29381: (nmadhok) No need to deepcopy since six.iterkeys() creates a copy
- PR #29349: (cro) Fix mis-setting chassis names
• PR #29334: (rallytime) Back-port #29237 to 2015.8
• PR #29300: (ticosax) [dockerng] Add support for volume management in dockerng
• PR #29218: (clan) check service enable state in test mode
• PR #29315: (jfindlay) dev tutorial doc: fix markup errors
• PR #29317: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #29240: (clan) handle acl_type [[d]efault:][user|group|mask|other]
• PR #29305: (lorenogordon) Add `file` as a source_hash proto
• PR #29272: (jfindlay) win_status module: handle 12 hour time in uptime
• PR #29289: (terminalmage) file.managed: Allow local file sources to use source_hash
• PR #29264: (anlutro) Prevent ssh_auth.absent from running when test=True
• PR #29277: (terminalmage) Update git_pillar runner to support new git ext_pillar config schema
• PR #29283: (cachedout) Single-quotes and use format
• PR #29139: (thomaso-mirodin) [salt-ssh] Add a range roster and range targeting options for the flat roster
• PR #29282: (cachedout) dev docs: add development tutorial
• PR #28994: (timcharper) add support to s3 for aws role assumption
• PR #29278: (techhat) Add verify_log to SPM
• PR #29067: (jacksont) Fix infinite recursion in state compiler for prereq of SLSs
• PR #29207: (jfindlay) do not shadow ret function argument
• PR #29215: (rallytime) Back-port #29192 to 2015.8
• PR #29217: (clan) show duration only if state_output_profile is False
• PR #29221: (ticosax) [dockerng] Docu network mode
• PR #29269: (jfindlay) win_status module: fix function names in docs

37.2.9 Salt 2015.8.5 Release Notes

About this Release
Salt 2015.8.5 is identical to the 2015.8.4 release with the addition of a fix for issue 30820, fixed by PR #30833. For convenience, the content from the 2015.8.4 release notes is included below.

Known Issue in boto_* execution modules
This release contains an issue that causes the boto_* execution modules to display a __salt__ not defined error (issue 30300). This issue will be fixed in an upcoming release, but can be manually resolved by completing the following:

1. Download the boto_* execution modules that you would like to update from the 2015.8 branch of Salt. A complete list of affected modules with the specific changes is available in PR #30867.
   A simple way to get the updated modules is to download a zip file of the 2015.8 branch from GitHub. The updated modules are in the salt\modules directory.
2. Copy the boto_* modules to the \srv\salt\_modules directory on your Salt master.
3. Run the following command to sync these modules to all Salt minions:
   ```shell
cat 'salt '*' saltutil.sync_modules
```

2015.8.4 Release Notes

Security Fix
CVE-2016-1866: Improper handling of clear messages on the minion, which could result in executing commands not sent by the master.

This issue affects only the 2015.8.x releases of Salt. In order for an attacker to use this attack vector, they would have to execute a successful attack on an existing TCP connection between minion and master on the pub port. It does not allow an external attacker to obtain the shared secret or decrypt any encrypted traffic between minion and master. Thank you to Sebastian Krahmer <krahmer@suse.com> for bringing this issue to our attention.

We recommend everyone upgrade to 2015.8.4 as soon as possible.

Core Changes

- PR #28994: timcharper Salt S3 module has learned how to assume IAM roles
- Added option mock=True for state.sls and state.highstate. This allows the salt state compiler to process sls data in a state run without actually calling the state functions, thus providing feedback on the validity of the arguments used for the functions beyond the preprocessing validation provided by state.show_sls (issue 30118 and issue 30189).
  ```shell
  salt '*' state.sls core,edit.vim mock=True
  salt '*' state.highstate mock=True
  salt '*' state.apply edit.vim mock=True
  ```
Changes for v2015.8.3..v2015.8.4

Total Merges: 320

Changes:

- PR #30613: (basepi) Fix minion/syndic clearfuncs
- PR #30609: (seanjnkns) Fix documentation for pillar_merge_lists which default is False, not ...
- PR #30584: (julianbrost) file.line state: add missing colon in docstring
- PR #30589: (terminalmage) Merge 2015.5 into 2015.8
- PR #30599: (multani) Documentation formatting fixes
- PR #30554: (rallytime) Make the salt-cloud actions output more verbose and helpful
- PR #30549: (techhat) Salt Virt cleanup
- PR #30553: (techhat) AWS: Support 17-character IDs
- PR #30532: (whiteinge) Add execution module for working in sls files
- PR #30529: (terminalmage) Merge 2015.5 into 2015.8
- PR #30526: (twangboy) Added FlushKey to make sure it's changes are saved to disk
- PR #30521: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #30485: (jtand) Updated pip_state to work with pip 8.0 on 2015.8
- PR #30494: (isbm) Zypper: info_installed — `errors' flag change to type `boolean'
- PR #30506: (jacksontj) Properly remove newlines after reading the file
- PR #30508: (rallytime) Fix Linode driver cloning functionality
- PR #30522: (terminalmage) Update git.list_worktree tests to reflect new return data
- PR #30483: (borgstrom) Pyobjects recursive import support (for 2015.8)
- PR #30491: (jacksontj) Add multi-IP support to network state
- PR #30496: (anlutro) Fix KeyError when adding ignored pillars
- PR #30359: (kingsquirrel152) Removes suspected copy/paste error for zmq_filtering functionailty
- PR #30448: (cournapre) Fix osx scripts location
- PR #30457: (rallytime) Remove fsutils references from modules list
- PR #30453: (rallytime) Make sure private AND public IPs are listed for Linode driver
- PR #30458: (rallytime) Back-port #30062 to 2015.8
- PR #30468: (timcharper) make note of s3 role assumption in upcoming changelog
- PR #30470: (whiteinge) Add example of the match_dict format to accept_dict wheel function
- PR #30450: (gtmanfred) fix extension loading in novaclient
- PR #30212: (abednarik) Fix incorrect file permissions in file.line
- PR #29947: (jfindlay) fileclient: decode file list from master
- PR #30363: (terminalmage) Use native ``list'' subcommand to list git worktrees
• PR #30445: (jtand) Boto uses False for is_default instead of None
• PR #30406: (frioux) Add an example of how to use file.managed/check_cmd
• PR #30424: (ismb) Check if byte strings are properly encoded in UTF-8
• PR #30405: (jtand) Updated glusterfs.py for python2.6 compatibility.
• PR #30396: (pass-by-value) Remove hardcoded val
• PR #30375: (rallytime) Wrap formatted log statements with six.u() in cloud/__init__.py
• PR #30384: (ismb) Bugfix: info_available does not work correctly on SLE 11 series
• PR #30376: (pritambaral) Fix FLO_DIR path in 2015.8
• PR #30389: (jtand) Older versions of ipset don’t support comments
• PR #30373: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #30372: (jacobhammons) Updated man pages for 2015.8.4, updated copyright to 2016
• PR #30370: (rallytime) Remove incomplete function
• PR #30366: (rallytime) Back-port #28702 to 2015.8
• PR #30361: (cro) Flip the sense of the test for proxymodule imports, add more fns for esxi proxy
• PR #30267: (ismb) Fix RPM issues with the date/time and add package attributes filtering
• PR #30360: (jfindlay) file.remove, file.absent: mention recursive dir removal
• PR #30221: (mbarrien) No rolcatupdate for user_exist in Postgres>=9.5 `#26845`
• PR #30358: (terminalmage) Add libgit2 version to versions-report
• PR #30346: (pass-by-value) Prevent orphaned volumes
• PR #30349: (rallytime) Back-port #30347 to 2015.8
• PR #30354: (anlutro) Make sure all ignore_missing SLSes are caught
• PR #30356: (nmadhok) Adding code author
• PR #30340: (jtand) Updated seed_test.py for changes made to seed module
• PR #30339: (jfindlay) Backport #26511
• PR #30343: (rallytime) Fix 2015.8 from incomplete back-port
• PR #30342: (eliasp) Correct whitespace placement in error message
• PR #30308: (rallytime) Back-port #30257 to 2015.8
• PR #30187: (rallytime) Back-port #27606 to 2015.8
• PR #30223: (serge-p) adding support for DragonFly BSD
• PR #30238: (rallytime) Reinit crypto before calling RSA.generate when generating keys.
• PR #30246: (dmacvicar) Add missing return data to scheduled jobs (`#24237`)
- PR #30211: (techhat) Execute chroot on the correct path
- PR #30309: (rallytime) Back-port #30304 to 2015.8
- PR #30278: (nmadhok) If datacenter is specified in the config, then look for managed objects under it
- PR #30305: (jacobhammons) Changed examples to use the `example.com` domain instead of `mycompan...
- PR #30249: (mprezioso) Fixes performance and timeout issues on win_pkg.install
- PR #30217: (pass-by-value) Make sure cloud actions can be called via salt run
- PR #30268: (terminalmage) Optimize file_tree ext_pillar and update file.managed to allow for binary contents
- PR #30245: (rallytime) Boto secgroup/iam_role: Add note stating us-east-1 is default region
- PR #30299: (rallytime) ESXi Proxy minions states are located at salt.states.esxi, not vsphere.
- PR #30202: (opdude) Fixed the periodic call to beacons
- PR #30303: (jacobhammons) Changed notes to indicate that functions are matched using regular ex...
- PR #30284: (terminalmage) salt.utils.gitfs: Fix Dulwich env detection and submodule handling
- PR #30280: (jfindlay) add state mocking to release notes
- PR #30273: (rallytime) Back-port #30121 to 2015.8
- PR #30301: (cachedout) Accept whatever comes into highstate mock for state tests
- PR #30282: (cachedout) Fix file.append logic
- PR #30289: (cro) Fix problems with targeting proxies by grains
- PR #30293: (cro) Ensure we don't log stuff we shouldn't
- PR #30279: (cachedout) Allow modules to be packed into boto utils
- PR #30186: (rallytime) Update CLI Examples in boto_ec2 module to reflect correct arg/kwarg positioning
- PR #30156: (abednarik) Add option in file.append to ignore_whitespace.
- PR #30189: (rallytime) Back-port #30185 to 2015.8
- PR #30215: (jacobhammons) Assorted doc bug fixes
- PR #30206: (cachedout) Revert `Fix incorrect file permissions in file.line`
- PR #30190: (jacobhammons) Updated doc site banners
- PR #30180: (jfindlay) modules.x509._dec2hex: add fmt index for 2.6 compat
- PR #30179: (terminalmage) Backport #26962 to 2015.8 branch
- PR #29693: (abednarik) Handle missing source file in ssh_auth.
- PR #30155: (rallytime) Update boto_secgroup and boto_iam_role docs to only use region OR profile
- PR #30158: (rallytime) Move _option(value) calls to __salt__['config.option'] in boto utils
- PR #30160: (dmurphy18) Fix parsing disk usage for line with no number and AIX values in Kilos
- PR #30162: (rallytime) Update list_present and append grains state function docs to be more clear.
- PR #30163: (rallytime) Add warning about using ``='' in file.line function
- PR #30164: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #30168: (abednarik) Fix incorrect file permissions in file.line
- PR #30154: (Oro) Fix file serialize on windows
- PR #30144: (rallytime) Added generic ESXCLI command ability to ESXi Proxy Minion
- PR #30142: (terminalmage) Fix dockerng.push, and allow for multiple images
- PR #30075: (joejulian) Convert glusterfs module to use xml
- PR #30129: (optix2000) Clean up _uptodate() in git state
- PR #30139: (rallytime) Back-port #29589 to 2015.8
- PR #30133: (abednarik) Update regex to detect ip alias in OpenBSD.
- PR #30126: (abednarik) Update regex to detect ip alias in OpenBSD.
- PR #30128: (oeufette) Log retryable transport errors as warnings
- PR #30096: (cachedout) Add rm_special to crontab module
- PR #30106: (techhat) Ensure last dir
- PR #30101: (gtmanfred) Fix bug where nova driver exits with no adminPass
- PR #30090: (techhat) Add argument to isdir()
- PR #30094: (rallytime) Fix doc formatting for cloud.create example in module.py state
- PR #30095: (rallytime) Add the list_nodes_select function to linode driver
- PR #30082: (abednarik) Fixed saltversioninfo grain return
- PR #30084: (rallytime) Back-port #29987 to 2015.8
- PR #30071: (rallytime) Merge branch `2015.5` into `2015.8`
- PR #30067: (ryan-lane) Pass in kwargs to boto_secgroup.convert_to_group_ids explicitly
- PR #30069: (techhat) Ensure that pki_dir exists
- PR #30064: (rallytime) Add Syndic documentation to miscellaneous Salt Cloud config options
- PR #30049: (rallytime) Add some more unit tests for the vsphere execution module
- PR #30060: (rallytime) Back-port #27104 to 2015.8
- PR #30048: (jacobhammons) Remove internal APIs from rest_cherrypy docs.
- PR #30043: (rallytime) Be explicit about importing from salt.utils.jinja to avoid circular imports
- PR #30038: (rallytime) Back-port #30017 to 2015.8
- PR #30036: (rallytime) Back-port #29995 to 2015.8
- PR #30035: (rallytime) Back-port #29895 to 2015.8
- PR #30034: (rallytime) Back-port #29893 to 2015.8
- PR #30033: (rallytime) Back-port #29876 to 2015.8
- PR #30029: (terminalmage) git.latest: Fix handling of nonexistent branches
- PR #30016: (anlutro) Properly normalize locales in locale.gen_locale
- PR #30015: (anlutro) locale module: don’t escape the slash in \n
- PR #30022: (gggunhed) Two minor typos fixed
- PR #30026: (anlutro) states.at: fix wrong variable being used
- PR #29966: (multani) Fix bigip state/module documentation + serializers documentation
• PR #29904: (twangboy) Improvements to osx packaging scripts
• PR #29950: (multani) boto_iam: fix deletion of IAM users when using delete_keys=true
• PR #29937: (multani) Fix states.boto_iam group users
• PR #29934: (multani) Fix state.boto_iam virtual name
• PR #29943: (cachedout) Check args correctly in boto_rds
• PR #29924: (gqgunhed) fixed: uptime now working on non-US Windows
• PR #29883: (serge-p) fix for nfs mounts in _active_mounts_openbsd()
• PR #29894: (techhat) Support Saltfile in SPM
• PR #29856: (rallytime) Added some initial unit tests for the salt.modules.vsphere.py file
• PR #29855: (rallytime) Back-port #29740 to 2015.8
• PR #29890: (multani) Various documentation fixes
• PR #29850: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #29811: (anlutro) influxdb: add retention policy module functions
• PR #29814: (basepi) [2015.8][Windows] Fix multi-master on windows
• PR #29819: (rallytime) Add esxi module and state to docs build
• PR #29832: (kleimbach) Fixed typo in order to use the keyboard module for RHEL without systemd
• PR #29803: (rallytime) Add vSphere module to doc ref module tree
• PR #29767: (abednarik) Hosts file update in mod_hostname.
• PR #29772: (terminalmage) pygit2: skip submodules when traversing tree
• PR #29765: (gtmanfred) allow nova driver to be boot from volume
• PR #29773: (l2ol33rt) Append missing wget in debian installation guide
• PR #29800: (rallytime) Back-port #29769 to 2015.8
• PR #29775: (paulnivin) Change listen requisite resolution from name to ID declaration
• PR #29754: (rallytime) Back-port #29719 to 2015.8
• PR #29713: (The-loeki) Pillar-based cloud providers still forcing use of deprecated `provider`
• PR #29729: (rallytime) Further clarifications on `unless` and `onlyif` requisites.
• PR #29737: (akissa) fix pillar sqlite3 documentation examples
• PR #29743: (akissa) fix pillar sqlite not honouring config options
• PR #29723: (rallytime) Clarify db_user and db_password kwargs for postgres_user.present state function
• PR #29722: (rallytime) Link ```stateful``` kwargs to definition of what ```stateful``` means for cmd state.
• PR #29724: (rallytime) Add examples of using multiple matching levels to Pillar docs
• PR #29726: (cachedout) Disable some boto tests per resolution of moto issue
• PR #29708: (lagesag) Fix test=True for file.directory with recurse ignore_files/ignore_dirs.
• PR #29642: (cachedout) Correctly restart demonized minions on failure
• PR #29599: (cachedout) Clean up minion shutdown
• PR #29675: (clinta) allow returning all refs
• PR #29683: (rallytime) Catch more specific error to pass the error message through elegantly.
• PR #29687: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #29681: (clinta) fix bare/mirror in git.latest
• PR #29644: (rallytime) Fixed a couple more ESXi proxy minion bugs
• PR #29645: (rallytime) Back-port #29558 to 2015.8
• PR #29632: (jfindlay) reduce severity of tls module __virtual__ logging
• PR #29606: (abednarik) Fixed duplicate mtu entry in RedHat 7 network configuration.
• PR #29613: (rallytime) Various ESXi Proxy Minion Bug Fixes
• PR #29628: (DmitryKuzmenko) Don’t create io_loop before fork
• PR #29609: (basepi) [2015.8][salt-ssh] Add ability to set salt-ssh command umask in roster
• PR #29603: (basepi) Fix orchestration failure-checking
• PR #29597: (terminalmage) dockerng: Prevent exception when API response contains empty dictionary
• PR #29596: (rallytime) Back-port #29587 to 2015.8
• PR #29588: (rallytime) Added ESXi Proxy Minion Tutorial
• PR #29572: (gtmanfred) [nova] use old discover_extensions if available
• PR #29545: (terminalmage) git.latest: init submodules if not yet initialized
• PR #29548: (rallytime) Back-port #29449 to 2015.8
• PR #29547: (rallytime) Refactored ESXCLI-based functions to accept a list of esxi_hosts
• PR #29563: (anlutro) Fix a call to deprecated method in python-influxdb
• PR #29565: (bdrung) Fix typos and missing release note
• PR #29540: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #29499: (rallytime) Initial commit of ESXi Proxy Minion
• PR #29526: (jfindlay) 2015.8.2 notes: add note about not being released
• PR #29531: (jfindlay) grains.core: handle undefined variable
• PR #29538: (basepi) [2015.8] [salt-ssh] Remove umask around actual execution for salt-ssh
• PR #29505: (rallytime) Update boto_rds state docs to include funky yaml syntax for `tags` option.
• PR #29513: (bdrung) Drop obsolete syslog.target from systemd services
• PR #29500: (rallytime) Back-port #29467 to 2015.8
• PR #29463: (abednarik) Add **kwargs to debconf.set.
• PR #29399: (jfindlay) modules.status: add human_readable option to uptime
• PR #29433: (cro) Files for building .pkg files for MacOS X
• PR #29455: (jfindlay) modules.nova.__init__: do not return None
• PR #29454: (jfindlay) rh_service module __virtual__ return error messages
• PR #29476: (tbaker57) Doc fix - route_table_present needs subnet_names (not subnets) as a key
• PR #29487: (rallytime) Back-port #29450 to 2015.8
• PR #29441: (rallytime) Make sure docs line up with blade_idrac function specs
- PR #29440: (rallytime) Back-port #28925 to 2015.8
- PR #29435: (galet) Grains return wrong OS version and other OS related values for Oracle Linux
- PR #29430: (rall0r) Fix host.present state limitation
- PR #29417: (jacobhammons) Repo install updates
- PR #29402: (techhat) Add rate limiting to linode
- PR #29400: (twangboy) Fix #19332
- PR #29398: (cachedout) Lint 29288
- PR #29331: (DmitryKuzmenko) Bugfix - #29116 raet dns error
- PR #29390: (jacobhammons) updated version numbers in documentation
- PR #29381: (nmadhok) No need to deepcopy since six.iterkeys() creates a copy
- PR #29349: (cro) Fix mis-setting chassis names
- PR #29334: (rallytime) Back-port #29237 to 2015.8
- PR #29300: (ticosax) [dockerng] Add support for volume management in dockerng
- PR #29218: (clan) check service enable state in test mode
- PR #29315: (jfindlay) dev tutorial doc: fix markup errors
- PR #29317: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #29240: (clan) handle acl_type [[d]efault:][u]ser|group|mask|other]
- PR #29305: (lorendgordon) Add `file` as a source_hash proto
- PR #29272: (jfindlay) win_status module: handle 12 hour time in uptime
- PR #29289: (terminalmage) file.managed: Allow local file sources to use source_hash
- PR #29264: (anlutro) Prevent ssh_auth.absent from running when test=True
- PR #29277: (terminalmage) Update git_pillar runner to support new git ext_pillar config schema
- PR #29283: (cachedout) Single-quotes and use format
- PR #29139: (thomaso-mirodin) [salt-ssh] Add a range roster and range targeting options for the flat roster
- PR #29282: (cachedout) dev docs: add development tutorial
- PR #28994: (timcharper) add support to s3 for aws role assumption
- PR #29278: (techhat) Add verify_log to SPM
- PR #29067: (jacksontj) Fix infinite recursion in state compiler for prereq of SLSs
- PR #29207: (jfindlay) do not shadow ret function argument
- PR #29215: (rallytime) Back-port #29192 to 2015.8
- PR #29217: (clan) show duration only if state_output_profile is False
- PR #29221: (ticosax) [dockerng] Docu network mode
- PR #29269: (jfindlay) win_status module: fix function names in docs
- PR #29213: (rallytime) Move _wait_for_task func from vmware cloud to vmware utils
- PR #29271: (techhat) Pass full path for digest (SPM)
- PR #29244: (isbm) List products consistently across all SLES systems
• PR #29255: (garethgreenaway) fixes to consul module
• PR #29208: (whytewolf) Glance more profile errors
• PR #29200: (jfindlay) mount state: unmount by device is optional
• PR #29205: (trevor-h) Fixes #29187 - using winrm on EC2
• PR #29170: (cachedout) Migrate pydsl tests to integration test suite
• PR #29198: (jfindlay) rh_ip module: only set the mtu once
• PR #29135: (jfindlay) sshKnownHosts.present state: catch not found exc
• PR #29196: (sroundt3ch) We need novaclient imported to compare versions
• PR #29059: (terminalmage) Work around upstream pygit2 bug
• PR #29112: (eliasp) Prevent backtrace (KeyError) in ssh_known_hosts.present state
• PR #29178: (whytewolf) Profile not being passed to keystone.endpoint_get in _auth. so if a p...

37.2.10 Salt 2015.8.7 Release Notes

Note: Salt 2015.8.4, 2015.8.5, and 2015.8.7 were all released within a short period due to regressions found soon after the releases of 2015.8.4 and 2015.8.5. These release notes contain all of the changes since 2015.8.3 to make it easier to see everything that has changed recently.

Changes for v2015.8.4..v2015.8.7

For pkg.installed states, on Linux distributions which use yum/dnf, packages which have a non-zero epoch in the version number now require this epoch to be included when specifying an exact version for a package. For example:

```bash
vim-enhanced:
  pkg.installed:
    - version: 2:7.4.160-1.el7
```

The pkg.latest_version and pkg.list_repo_pkgs functions can be used to get the correct version string to use, as they will now contain the epoch when it is non-zero.

• Total PR references: 3

Changes:

• PR #31111: (jtand) Fixes failing npm test on arch. @ 2016-02-10T21:51:47Z
  - 8d84c63 Merge pull request #31111 from jtand/8_4_npm_fix
  - b0a48e5 Fixes failing npm test on arch.
Some 3rd-party modules (e.g. gnupg) define custom log levels that emit at INFO level and above. This patch sets the color data lookups to default to TextFormat('reset') rather than producing a stack trace every time a log message is generated from an affected module.

PR #30217 (pass-by-value) Make sure cloud actions can be called via salt run

PR #31092 (terminalmage) Apply PR #31031 to 2015.8.4.follow_up @ 2016-02-10T20:54:37Z

- Merge pull request #31092 from terminalmage/issue31014-2015.8.4.follow_up
  * e5dfc0 More efficient way to add the epoch before version number
  * ed74627 include possible epoch in version for rpm

- Comment multiprocessing line in minion config
- Set multiprocessing to true in config.py
- Fix remove placeholder files
- Remove placeholder files
- Set overwrite to off
- Fix boto_secgroup
- Fix boto test failures
- Fix regression when contents_pillar/contents_grains is a list.
- Don't handle epoch specially for dnf
- More efficient way to add the epoch before version number
- include possible epoch in version for rpm

- The call to cp.get_url needs the saltenv, if you're using environments other than base, it will fail.
- Fix regression in git_pillar when multiple remotes are configured
- Properly set the default value for pillar_merge_lists
- Lint
- Fix failing boto_vpc module unit tests
- Fix failing state module tests
- Pylint fix
- Don't use pack=pack. Just pass in pack=__salt__ always.
- Pass in `pack' variable to utils.boto.assign_funcs function from ALL boto modules.
- Remove bad symlinks in osx pkg dirs
- Fix regression in scanning for state with `name' param

Security Fix

CVE-2016-1866: Improper handling of clear messages on the minion, which could result in executing commands not sent by the master.

This issue affects only the 2015.8.x releases of Salt. In order for an attacker to use this attack vector, they would have to execute a successful attack on an existing TCP connection between minion and master on the pub port. It
does not allow an external attacker to obtain the shared secret or decrypt any encrypted traffic between minion and master. Thank you to Sebastian Krahmer <krahmer@suse.com> for bringing this issue to our attention.

We recommend everyone upgrade to 2015.8.4 as soon as possible.

Core Changes

- PR #28994: timcharper Salt S3 module has learned how to assume IAM roles
- Added option mock=True for state.sls and state.highstate. This allows the salt state compiler to process sls data in a state run without actually calling the state functions, thus providing feedback on the validity of the arguments used for the functions beyond the preprocessing validation provided by state.show_sls (issue 30118 and issue 30189).

```bash
salt '*' state.sls core,edit.vim mock=True
salt '*' state.highstate mock=True
salt '*' state.apply edit.vim mock=True
```

Changes for v2015.8.3..v2015.8.4

Total Merges: 320

Changes:

- PR #30613: (basepi) Fix minion/syndic clearfuncs
- PR #30609: (seanjnkns) Fix documentation for pillar_merge_lists which default is False, not ...
- PR #30584: (julianbrost) file.line state: add missing colon in docstring
- PR #30589: (terminalmage) Merge 2015.5 into 2015.8
- PR #30599: (multani) Documentation formatting fixes
- PR #30554: (rallytime) Make the salt-cloud actions output more verbose and helpful
- PR #30549: (techhat) Salt Virt cleanup
- PR #30553: (techhat) AWS: Support 17-character IDs
- PR #30532: (whiteinge) Add execution module for working in sls files
- PR #30529: (terminalmage) Merge 2015.5 into 2015.8
- PR #30526: (twangboy) Added FlushKey to make sure it's changes are saved to disk
- PR #30521: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #30485: (jtand) Updated pip_state to work with pip 8.0 on 2015.8
- PR #30494: (isbm) Zypper: info_installed — `errors` flag change to type `boolean`
- PR #30506: (jacksontj) Properly remove newlines after reading the file
- PR #30508: (rallytime) Fix Linode driver cloning functionality
- PR #30522: (terminalmage) Update git.list_worktree tests to reflect new return data
- PR #30483: (borgstrom) Pyobjects recursive import support (for 2015.8)
- PR #30491: (jacksontj) Add multi-IP support to network state
- PR #30496: (anlutro) Fix KeyError when adding ignored pillars
- PR #30359: (kingsquirrel152) Removes suspected copy/paste error for zmq_filtering functionality
- PR #30448: (cournape) Fix osx scripts location
- PR #30457: (rallytime) Remove fsutils references from modules list
- PR #30453: (rallytime) Make sure private AND public IPs are listed for Linode driver
- PR #30458: (rallytime) Back-port #30062 to 2015.8
- PR #30468: (timcharper) make note of s3 role assumption in upcoming changelog
- PR #30470: (whiteinge) Add example of the match_dict format to accept_dict wheel function
- PR #30450: (gtmanfred) fix extension loading in novaclient
- PR #30212: (abednarik) Fix incorrect file permissions in file.line
- PR #29947: (jfindlay) fileclient: decode file list from master
- PR #30363: (terminalmage) Use native `"list" subcommand to list git worktrees
- PR #30445: (jtand) Boto uses False for is_default instead of None
- PR #30406: (frioux) Add an example of how to use file.managed/check_cmd
- PR #30424: (ismb) Check if byte strings are properly encoded in UTF-8
- PR #30405: (jtand) Updated glusterfs.py for python2.6 compatibility.
- PR #30396: (pass-by-value) Remove hardcoded val
- PR #30391: (jtand) Added else statements
- PR #30375: (rallytime) Wrap formatted log statements with six.u() in cloud/__init__.py
- PR #30384: (ismb) Bugfix: info_available does not work correctly on SLE 11 series
- PR #30376: (pritambaral) Fix FLO_DIR path in 2015.8
- PR #30389: (jtand) Older versions of ipset don’t support comments
- PR #30373: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #30372: (jacobhammons) Updated man pages for 2015.8.4, updated copyright to 2016
- PR #30370: (rallytime) Remove incomplete function
- PR #30366: (rallytime) Back-port #28702 to 2015.8
- PR #30361: (cro) Flip the sense of the test for proxymodule imports, add more fns for esxi proxy
- PR #30267: (ismb) Fix RPM issues with the date/time and add package attributes filtering
- PR #30360: (jfindlay) file.remove, file.absent: mention recursive dir removal
- PR #30221: (mbarrien) No rolcatupdate for user_exist in Postgres>=9.5 `#26845`
- PR #30358: (terminalmage) Add libgit2 version to versions-report
- PR #30346: (pass-by-value) Prevent orphaned volumes
- PR #30349: (rallytime) Back-port #30347 to 2015.8
- PR #30354: (anlutro) Make sure all ignore_missing SLSes are caught
- PR #30356: (nmadhok) Adding code author
• PR #30340: (jtand) Updated seed_test.py for changes made to seed module
• PR #30339: (jfindlay) Backport #26511
• PR #30343: (rallytime) Fix 2015.8 from incomplete back-port
• PR #30342: (eliasp) Correct whitespace placement in error message
• PR #30308: (rallytime) Back-port #30257 to 2015.8
• PR #30187: (rallytime) Back-port #27606 to 2015.8
• PR #30223: (serge-p) adding support for DragonFly BSD
• PR #30238: (rallytime) Reinit crypto before calling RSA.generate when generating keys.
• PR #30246: (dmacvicar) Add missing return data to scheduled jobs (`#24237`)
• PR #30292: (thegoodduke) ipset: fix test=true & add comment for every entry
• PR #30275: (abednarik) Add permanent argument in firewalld.
• PR #30328: (cachedout) Fix file test
• PR #30310: (pass-by-value) Empty bucket fix
• PR #30211: (techhat) Execute choot on the correct path
• PR #30309: (rallytime) Back-port #30304 to 2015.8
• PR #30278: (nmadhok) If datacenter is specified in the config, then look for managed objects under it
• PR #30305: (jacobhammons) Changed examples to use the `"example.com"` domain instead of `"mycompany...`
• PR #30249: (mpreziuso) Fixes performance and timeout issues on win_pkg.install
• PR #30217: (pass-by-value) Make sure cloud actions can be called via salt run
• PR #30268: (terminalmage) Optimize file_tree ext_pillar and update file.managed to allow for binary contents
• PR #30245: (rallytime) Boto seccgroup/iam_role: Add note stating us-east-1 is default region
• PR #30299: (rallytime) ESXi Proxy minions states are located at salt.states.esxi, not vsphere.
• PR #30202: (opdude) Fixed the periodic call to beacons
• PR #30303: (jacobhammons) Changed notes to indicate that functions are matched using regular ex...
• PR #30284: (terminalmage) salt.utils.gitfs: Fix Dulwich env detection and submodule handling
• PR #30280: (jfindlay) add state mocking to release notes
• PR #30273: (rallytime) Back-port #30121 to 2015.8
• PR #30301: (cachedout) Accept whatever comes into highstate mock for state tests
• PR #30282: (cachedout) Fix file.append logic
• PR #30289: (cro) Fix problems with targeting proxies by grains
• PR #30293: (cro) Ensure we don’t log stuff we shouldn’t
• PR #30279: (cachedout) Allow modules to be packed into boto utils
• PR #30186: (rallytime) Update CLI Examples in boto_ec2 module to reflect correct arg/kwarg positioning
• PR #30156: (abednarik) Add option in file.append to ignore whitespace.
• PR #30189: (rallytime) Back-port #30185 to 2015.8
• PR #30215: (jacobhammons) Assorted doc bug fixes
- PR #30206: (cachedout) Revert 'Fix incorrect file permissions in file.line'
- PR #30190: (jacobhammons) Updated doc site banners
- PR #30180: (jfindlay) modules.x509._dec2hex: add fmt index for 2.6 compat
- PR #30179: (termalmage) Backport #26962 to 2015.8 branch
- PR #29693: (abednarik) Handle missing source file in ssh_auth.
- PR #30155: (rallytime) Update boto_secgroup and boto_iam_role docs to only use region OR profile
- PR #30158: (rallytime) Move _option(value) calls to __salt__['config.option'] in boto utils
- PR #30160: (dmurphy18) Fix parsing disk usage for line with no number and AIX values in Kilos
- PR #30162: (rallytime) Update list_present and append grains state function docs to be more clear.
- PR #30163: (rallytime) Add warning about using '``=' in file.line function
- PR #30164: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #30168: (abednarik) Fix incorrect file permissions in file.line
- PR #30154: (Oro) Fix file serialize on windows
- PR #30144: (rallytime) Added generic ESXCLI command ability to ESXi Proxy Minion
- PR #30142: (termalmage) Fix dockerng.push, and allow for multiple images
- PR #30075: (joejulian) Convert glusterfs module to use xml
- PR #30129: (optix2000) Clean up _uptodate() in git state
- PR #30139: (rallytime) Back-port #29589 to 2015.8
- PR #30124: (abednarik) Update regex to detect ip alias in OpenBSD.
- PR #30133: (stanislavb) Fix typo in gpgkey URL
- PR #30126: (stanislavb) Log S3 API error message
- PR #30128: (oeufete) Log retryable transport errors as warnings
- PR #30096: (cachedout) Add rm_special to crontab module
- PR #30106: (techhat) Ensure last dir
- PR #30101: (gtmanfred) fix bug where nova driver exits with no adminPass
- PR #30090: (techhat) Add argument to isdir()
- PR #30094: (rallytime) Fix doc formatting for cloud.create example in module.py state
- PR #30095: (rallytime) Add the list_nodes_select function to linode driver
- PR #30082: (abednarik) Fixed saltversioninfo grain return
- PR #30084: (rallytime) Back-port #29987 to 2015.8
- PR #30071: (rallytime) Merge branch `2015.5` into `2015.8`
- PR #30067: (ryan-lane) Pass in kwargs to boto_secgroup.convert_to_group_ids explicitly
- PR #30069: (techhat) Ensure that pki_dir exists
- PR #30064: (rallytime) Add Syndic documentation to miscellaneous Salt Cloud config options
- PR #30049: (rallytime) Add some more unit tests for the vsphere execution module
- PR #30060: (rallytime) Back-port #27104 to 2015.8
- PR #30048: (jacobhammons) Remove internal APIs from rest_cherrypy docs.
- PR #30043: (rallytime) Be explicit about importing from salt.utils.jinja to avoid circular imports
- PR #30038: (rallytime) Back-port #30017 to 2015.8
- PR #30036: (rallytime) Back-port #29995 to 2015.8
- PR #30035: (rallytime) Back-port #29895 to 2015.8
- PR #30034: (rallytime) Back-port #29893 to 2015.8
- PR #30033: (rallytime) Back-port #29876 to 2015.8
- PR #30029: (terminalmage) git.latest: Fix handling of nonexistent branches
- PR #30016: (anlutro) Properly normalize locales in locale.gen_locale
- PR #30015: (anlutro) locale module: don't escape the slash in \n
- PR #30022: (gggunhed) Two minor typos fixed
- PR #30026: (anlutro) states.at: fix wrong variable being used
- PR #29966: (multani) Fix bigip state/module documentation + serializers documentation
- PR #29904: (twangboy) Improvements to osx packaging scripts
- PR #29950: (multani) boto_iam: fix deletion of IAM users when using delete_keys=true
- PR #29937: (multani) Fix states.boto_iam group users
- PR #29934: (multani) Fix state.boto_iam virtual name
- PR #29943: (cachedout) Check args correctly in boto_rds
- PR #29924: (gggunhed) fixed: uptime now working on non-US Windows
- PR #29883: (serge-p) fix for nfs mounts in _active_mounts_openbsd() 
- PR #29894: (techhat) Support Saltfile in SPM
- PR #29856: (rallytime) Added some initial unit tests for the salt.modules.vsphere.py file
- PR #29855: (rallytime) Back-port #29740 to 2015.8
- PR #29890: (multani) Various documentation fixes
- PR #29850: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #29811: (anlutro) influxdb: add retention policy module functions
- PR #29814: (basepi) [2015.8][Windows] Fix multi-master on windows
- PR #29819: (rallytime) Add esxi module and state to docs build
- PR #29832: (jleimbach) Fixed typo in order to use the keyboard module for RHEL without systemd
- PR #29803: (rallytime) Add vSphere module to doc ref module tree
- PR #29767: (abednarik) Hosts file update in mod_hostname.
- PR #29772: (terminalmage) pygit2: skip submodules when traversing tree
- PR #29765: (gtmanfred) allow nova driver to be boot from volume
- PR #29773: (l2ol33rt) Append missing wget in debian installation guide
- PR #29800: (rallytime) Back-port #29769 to 2015.8
- PR #29775: (paulnivin) Change listen requisite resolution from name to ID declaration
2352 Chapter 37. Release notes

- PR #29754: (rallytime) Back-port #29719 to 2015.8
- PR #29713: (The-Loeki) Pillar-based cloud providers still forcing use of deprecated `provider`
- PR #29729: (rallytime) Further clarifications on ``unless`` and ``onlyif`` requisites.
- PR #29737: (akissa) fix pillar sqlite3 documentation examples
- PR #29743: (akissa) fix pillar sqlite not honouring config options
- PR #29723: (rallytime) Clarify db_user and db_password kwargs for postgres_user.present state function
- PR #29722: (rallytime) Link ``stateful`` kwargs to definition of what ``stateful`` means for cmd state.
- PR #29724: (rallytime) Add examples of using multiple matching levels to Pillar docs
- PR #29726: (cachedout) Disable some boto tests per resolution of moto issue
- PR #29708: (lagesag) Fix test=True for file.directory with recurse ignore_files/ignore_dirs.
- PR #29642: (cachedout) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #29599: (cachedout) Clean up minion shutdown
- PR #29675: (clinta) allow returning all refs
- PR #29683: (rallytime) Catch more specific error to pass the error message through elegantly.
- PR #29687: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #29681: (clinta) fix bare/mirror in git.latest
- PR #29644: (rallytime) Fixed a couple more ESXi proxy minion bugs
- PR #29645: (rallytime) Back-port #29558 to 2015.8
- PR #29632: (jfindlay) reduce severity of tls module __virtual__ logging
- PR #29606: (abednarik) Fixed duplicate mtu entry in RedHat 7 network configuration.
- PR #29613: (rallytime) Various ESXi Proxy Minion Bug Fixes
- PR #29628: (DmitryKuzmenko) Don't create io_loop before fork
- PR #29609: (basepi) [2015.8][salt-ssh] Add ability to set salt-ssh command umask in roster
- PR #29603: (basepi) Fix orchestration failure-checking
- PR #29597: (terminalmage) dockerng: Prevent exception when API response contains empty dictionary
- PR #29596: (rallytime) Back-port #29587 to 2015.8
- PR #29588: (rallytime) Added ESXi Proxy Minion Tutorial
- PR #29572: (gtmanfred) [nova] use old discover_extensions if available
- PR #29545: (terminalmage) git.latest: init submodules if not yet initialized
- PR #29548: (rallytime) Back-port #29449 to 2015.8
- PR #29547: (rallytime) Refactored ESXCLI-based functions to accept a list of esxi_hosts
- PR #29563: (anlutro) Fix a call to deprecated method in python-influxdb
- PR #29565: (bdrung) Fix typos and missing release note
- PR #29540: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #29499: (rallytime) Initial commit of ESXi Proxy Minion
- PR #29526: (jfindlay) 2015.8.2 notes: add note about not being released
• PR #29531: (jfindlay) grains.core: handle undefined variable
• PR #29538: (basepi) [2015.8] [salt-ssh] Remove umask around actual execution for salt-ssh
• PR #29505: (rallytime) Update boto_rds state docs to include funky yaml syntax for ``tags`` option.
• PR #29513: (bdrung) Drop obsolete syslog.target from systemd services
• PR #29500: (rallytime) Back-port #29467 to 2015.8
• PR #29505: (rallytime) Back-port #29467 to 2015.8
• PR #29513: (bdrung) Drop obsolete syslog.target from systemd services
• PR #29500: (rallytime) Back-port #29467 to 2015.8
• PR #29463: (abednarik) Add **kwargs to debconf.set.
• PR #29505: (rallytime) Back-port #29467 to 2015.8
• PR #29463: (abednarik) Add **kwargs to debconf.set.
• PR #29399: (jfindlay) modules.status: add human_readable option to uptime
• PR #29433: (cro) Files for building .pkg files for MacOS X
• PR #29455: (jfindlay) modules.nova.__init__: do not return None
• PR #29454: (jfindlay) rh_service module __virtual__ return error messages
• PR #29476: (tbaker57) Doc fix - route_table_present needs subnet_names (not subnets) as a key
• PR #29487: (rallytime) Back-port #29450 to 2015.8
• PR #29441: (rallytime) Make sure docs line up with blade_idrac function specs
• PR #29440: (rallytime) Back-port #28925 to 2015.8
• PR #29435: (galet) Grains return wrong OS version and other OS related values for Oracle Linux
• PR #29430: (rall0r) Fix host.present state limitation
• PR #29417: (jacobhammons) Repo install updates
• PR #29402: (techhat) Add rate limiting to linode
• PR #29400: (twangboy) Fix #19332
• PR #29398: (cachedout) Lint 29288
• PR #29331: (DmitryKuzmenko) Bugfix - #29116 raet dns error
• PR #29390: (jacobhammons) updated version numbers in documentation
• PR #29381: (nmadhok) No need to deepcopy since six.iterkeys() creates a copy
• PR #29349: (cro) Fix mis-setting chassis names
• PR #29334: (rallytime) Back-port #29237 to 2015.8
• PR #29300: (ticosax) [dockerng] Add support for volume management in dockerng
• PR #29218: (clan) check service enable state in test mode
• PR #29315: (jfindlay) dev tutorial doc: fix markup errors
• PR #29317: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #29240: (clan) handle acl_type [[default:][user|group|mask|other]
• PR #29305: (loregordon) Add ‘file’ as a source_hash proto
• PR #29272: (jfindlay) win_status module: handle 12 hour time in uptime
• PR #29289: (terminalmage) file.managed: Allow local file sources to use source_hash
• PR #29264: (anlutro) Prevent ssh_auth.absent from running when test=True
• PR #29277: (terminalmage) Update git_pillar runner to support new git ext_pillar config schema
• PR #29283: (cachedout) Single-quotes and use format

37.2. Previous Releases
• PR #29139: (thomaso-mirodin) [salt-ssh] Add a range roster and range targeting options for the flat roster
• PR #29282: (cachedout) dev docs: add development tutorial
• PR #28994: (timcharper) add support to s3 for aws role assumption
• PR #29278: (teckhat) Add verify_log to SPM
• PR #29067: (jacksonj) Fix infinite recursion in state compiler for prereq of SLSs
• PR #29207: (jfindlay) do not shadow ret function argument
• PR #29215: (rallytime) Back-port #29192 to 2015.8
• PR #29217: (clan) show duration only if state_output_profile is False
• PR #29221: (ticosax) [dokcerg] Docu network mode
• PR #29269: (jfindlay) win_status module: fix function names in docs
• PR #29213: (rallytime) Move _wait_for_task func from vmware cloud to vmware utils

37.2.11 Salt 2015.8.8 Release Notes

Important: 2015.8.8.2 was released shortly after 2015.8.8 to fix several known issues. If you installed 2015.8.8 before 03/30/2016, you likely have installed 2015.8.8 and can optionally upgrade (find out which version you have installed using salt --version. The latest version is 2015.8.8.2).

Salt 2015.8.8.2

Salt 2015.8.8.2 includes fixes for the following known issues in 2015.8.8:

• issue 32044: Key master with value [...] has an invalid type of list Error
• issue 32004: Failed to import module win_dacl Error
• issue 32114: Wrong validation type for file_ignore_glob key
• issue 31969: Fix file.managed for windows

**Important:** issue 32183 prevents Salt Cloud from installing the Salt minion on new systems. To workaround this issue, call `salt-cloud -u` to update the bootstrap script to the latest version.

---

**Salt 2015.8.8**

**Security Fix**

CVE-2016-3176: Insecure configuration of PAM external authentication service

This issue affects all Salt versions prior to 2015.8.8/2015.5.10 when PAM external authentication is enabled. This issue involves passing an alternative PAM authentication service with a command that is sent to `LocalClient`, enabling the attacker to bypass the configured authentication service. Thank you to Dylan Frese <dmfrese@gmail.com> for bringing this issue to our attention.

This update defines the PAM eAuth service that users authenticate against in the Salt Master configuration.

**Read Before Upgrading Debian 7 (Wheezy) from 2015.8.7 to 2015.8.8**

Before you upgrade from 2015.8.7 on Debian 7, you must run the following commands to remove previous packages:

```
sudo apt-get remove python-pycrypto
sudo apt-get remove python-apache-libcloud
```

Note that `python-pycrypto` will likely remove `python-apache-libcloud`, so the second command might not be necessary. These have been replaced by `python-crypto` and `python-libcloud` with -bpo70+1 moniker.

**Read Before Upgrading Debian 8 (Jessie) from Salt Versions Earlier than 2015.8.4**

Salt systemd service files are missing the following statement in these versions:

```
[Service]
KillMode=process
```

This statement must be added to successfully upgrade on these earlier versions of Salt.

**Changes for v2015.8.7..v2015.8.8**

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

*Generated at: 2016-03-17T21:03:44Z*

Total Merges: 312

Changes:

- PR #31947: (cro) Move proxymodule assignment earlier in proxy minion init
- PR #31948: (rallytime) Revert `not not` deletion and add comment as to why that is there
- PR #31952: (rallytime) Fix lint for 2015.8 branch
- PR #31933: (rallytime) Fix linking syntax in testing docs
- PR #31930: (cro) Backport changes from 2016.3
- PR #31924: (jfindlay) update 2015.8.8 release notes
- PR #31922: (cachedout) For 2015.8 head
- PR #31904: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #31906: (sbreidba) Win_dacl module: fix FULLCONTROL / FILE_ALL_ACCESS definition
- PR #31745: (isbm) Fix the always-false behavior on checking state
- PR #31911: (rallytime) Merge #31903 with pylint fix
- PR #31883: (paiou) Fix scaleway cloud provider and manage x86 servers
- PR #31903: (terminalmage) Use remote_ref instead of local_ref to see if checkout is necessary
- PR #31845: (sakateka) Now a check_file_meta deletes temporary files when test=True
- PR #31901: (rallytime) Back-port #31846 to 2015.8
- PR #31905: (terminalmage) Update versionadded directive
- PR #31902: (rallytime) Update versionadded tag for new funcs
- PR #31888: (terminalmage) Fix salt.utils.decorators.Depends
- PR #31857: (sjorge) gen_password and del_password missing from solaris_shadow
- PR #31879: (cro) Clarify some comments
- PR #31815: (dr4Ke) Fix template on contents 2015.8
- PR #31818: (anlutro) Prevent event logs from writing huge amounts of data
- PR #31836: (terminalmage) Fix git_pillar race condition
- PR #31824: (rallytime) Back-port #31819 to 2015.8
- PR #31856: (szeestraten) Adds missing docs for Virtual Network and Subnet options in salt-cloud Azure cloud profile
- PR #31839: (jfindlay) add 2015.8.8 release notes
- PR #31828: (gtmanfred) Remove ability of authenticating user to specify pam service
- PR #31787: (anlutro) Fix user_create and db_create for new versions of influxdb
- PR #31800: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #31797: (Ch3LL) Change pkg name to less for suse pkg.info_installed test
- PR #31793: (xopher-mc) fixing init system detection on sles 11, refs `#31617`_
- PR #31785: (isbm) Bugfix: zypper doesn't detect base product on SLE11 series
- PR #31780: (gtmanfred) use already created vsphere connection
- PR #31779: (sbreidba) win_dacl state & module: return comment field as strings, not lists.
- PR #31723: (sjorge) file_ignore_regex is a list, not bool
- PR #31747: (techhat) Use get_local_client with MASTER opts, not MINION
- PR #31688: (whiteinge) Various SMTP returner fixes
- PR #31752: (rallytime) Back-port #31686 to 2015.8
- PR #31733: (jacobhammons) docs to clarify cloud configuration
- PR #31775: (techhat) Show correct provider/driver name
- PR #31754: (techhat) Check all providers, not just the current one
- PR #31375: (rallytime) Add reboot, start, and stop actions to digital ocean driver
- PR #31770: (anlutro) Fix influxdb user functionality for version 0.9+
- PR #31743: (Talkless) Fix parentheses mismatch in documentation
- PR #31162: (isbm) Remove MD5 digest from everywhere and default to SHA256
- PR #31670: (terminalmage) Write lists of minions targeted by syndic masters to job cache
- PR #31711: (ticosax) [dockerng] Port and Volume comparison should consider Dockerfile
- PR #31719: (techhat) Don't worry about KeyErrors if the node is already removed
- PR #31713: (ticosax) [dockerng] Fix dockerng.network_present when container is given by name
- PR #31705: (peripatetic-sojourner) Foreman pillar
- PR #31702: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #31700: (sroundt3ch) It’s a function!
- PR #31679: (cro) Fix bad link to the sample REST endpoint in salt-contrib.
- PR #31668: (rallytime) Some more testing documentation improvements
- PR #31653: (DmitryKuzmenko) Don’t attempt to verify token if it wasn’t sent to master.
- PR #31629: (darix) Fix services on sles
- PR #31641: (rallytime) Improve Salt Testing tutorial to be a more comprehensive intro
- PR #31651: (dr4Ke) test case: test_list_present_nested_already
- PR #31643: (opdude) Make sure we are really updating the mercurial repository
- PR #31598: (terminalmage) Remove limitations on validation types for eauth targets
- PR #31627: (jakehilton) Handling error from using gevent 1.1.
- PR #31630: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #31594: (rallytime) Back-port #31589 to 2015.8
- PR #31604: (joejulian) Workaround for non-xml output from gluster cli when not tty
- PR #31583: (vutny) Remove trailing white spaces
- PR #31592: (rallytime) Back-port #31546 to 2015.8
- PR #31593: (rallytime) Back-port #31570 to 2015.8
- PR #31567: (cachedout) Restore FIPS compliance when using master_finger
- PR #31568: (twangboy) Grant permissions using SID instead of name
- PR #31561: (jtand) Skipped test
- PR #31550: (rallytime) Correct versionadded tag for win_service.config
- PR #31549: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #31544: (DmitryKuzmenko) Protect getattr from recursion
- PR #31525: (DmitryKuzmenko) Issues/30643 merge forward fixes

37.2. Previous Releases

2357
• PR #31536: (virtualguy) Remove debian repo from raspbian installation
• PR #31528: (vutny) Correct Salt Cloud documentation about updating Salt Bootstrap script
• PR #31539: (DmitryKuzmenko) Added temporary workaround for CentOS 7 os-release id bug.
• PR #31508: (mcalmer) Zypper correct exit code checking
• PR #31510: (vutny) Add installation guide for Raspbian (Debian on Raspberry Pi)
• PR #31498: (Ch3LL) rename methods in pkg states test
• PR #31477: (vutny) Correct installation documentation for Ubuntu
• PR #31479: (isbm) Zypper unit tests & fixes
• PR #31445: (rallytime) Only use LONGSIZE in rpm.info if available. Otherwise, use SIZE.
• PR #31446: (Ch3LL) integration test: ensure decorator only runs on one method and not class
• PR #31458: (vutny) Correct installation documentation for Debian
• PR #31457: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #31439: (rallytime) Fix lowpkg.info function for Ubuntu 12 - make sure we have a pkg name
• PR #31456: (RabidCicada) Clarified the form of requisite targets/requisite-references
• PR #31453: (DmitryKuzmenko) Backport cp_geturl fix for large files into 2015.8
• PR #31444: (jacobhammons) Documentation updates - ddns state, file.line state/exe function, installation dependencies
• PR #31341: (twangboy) Clarification on Windows Package Manager docs
• PR #31380: (kiorky) Bring up ext_pillar rendering errors as well
• PR #31418: (terminalmage) Fix core grains when Debian OS detected as `Debian GNU/Linux`
• PR #31429: (mcalmer) fix argument handling for pkg.download
• PR #31432: (ticosax) [dockerng] Hotfix docker 1.10.2
• PR #31420: (twangboy) Handle Unversioned Packages
• PR #31417: (jacobhammons) ddns state docs updated with notes regarding the name, zone, and keyfile.
• PR #31391: (redmcg) Added sanity check: is `pillar` in self.opts
• PR #31376: (cro) Some distros don’t have a /lib/systemd
• PR #31352: (ticosax) [dockerng] Pull missing images when calling dockerng.running
• PR #31378: (mcalmer) Zypper refresh handling
• PR #31373: (terminalmage) Use --set-upstream instead of --track to set upstream on older git
• PR #31390: (abednarik) Fix Logrotate module.
• PR #31354: (ticosax) [dockerng] Don't require auth for all registries
• PR #31368: (whiteinge) Update list of netapi clients for autoclass
• PR #31357: (techhat) Add docs on how to actually use SDB
• PR #31357: (ticosax) [dockerng] Support docker inconsistencies
• PR #31353: (ticosax) [dockerng] Fix when ports are integers
• PR #31346: (ticosax) Backport #31130 to 2015.8
• PR #31332: (terminalmage) Clarify documentation for gitfs/hgfs/svnfs mountpoint and root options
• PR #31305: (mcalmer) call zypper with option --non-interactive everywhere
• PR #31337: (jacobhammons) Release notes and versioning for 2015.8.7
• PR #31326: (ticosax) [dockerng ] Detect settings removal
• PR #31292: (twangboy) Fix dunder virtual to check for Remote Administration Tools
• PR #31287: (joejulian) Rework tests and fix reverse peering with gluster 3.7
• PR #31196: (sakateka) Here are a few fixes utils.network
• PR #31299: (rallytime) Allow state-output and state-verbose default settings to be set from CLI
• PR #31317: (terminalmage) Fix versionadded directive
• PR #31301: (terminalmage) Corrected fix for `#30999`
• PR #31302: (terminalmage) Audit CLI opts used in git states
• PR #31312: (terminalmage) Merge 2015.5 into 2015.8
• PR #31225: (pprince) Fix in file_tree pillar (Fixes `#31223`)
• PR #31233: (mcalmer) implement version_cmp for zypper
• PR #31273: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #31253: (gtmanfred) allow for nova servers to be built with premade volumes
• PR #31271: (rallytime) Back-port #30689 to 2015.8
• PR #31255: (jacobhammons) Fixes `#30461`
• PR #31189: (dmacvicar) Fix crash with scheduler and runners (`#31106`)
• PR #31201: (The-Loeki) Utilize prepared grains var in master-side ipcidr matching
• PR #31239: (terminalmage) Improve logging when master cannot decode a payload
• PR #31190: (twangboy) Clear minion cache before caching from master
• PR #31226: (pprince) Minor docs fix: file_tree pillar (Fixes #31124)
• PR #31234: (mcalmer) improve doc for list_pkgs
• PR #31237: (mcalmer) add handling for OEM products
• PR #31182: (rallytime) Back-port #31172 to 2015.8
• PR #31191: (rallytime) Make sure doc example matches kwarg
• PR #31171: (Ch3LL) added logic to check for installed package
• PR #31177: (Ch3LL) add integration test for issue `#30934`
• PR #31181: (cachedout) Lint 2015.8 branch
• PR #31169: (rallytime) Back-port #29718 to 2015.8
• PR #31170: (rallytime) Back-port #31157 to 2015.8
• PR #31147: (cro) Documentation clarifications.
• PR #31153: (eden crane) Fixed invalid host causing `reference to variable before assignment`
• PR #31152: (gareth greenaway) fixes to beacon module, state module and friends
• PR #31149: (ffindlay) add 2015.8.7 release notes
• PR #31134: (isbm) Fix types in the output data and return just a list of products
• PR #31120: (gterm manfred) Clean up some bugs in the nova driver
• PR #31132: (rallytime) Make sure required profile configurations passed in a map file work
• PR #31131: (Ch3LL) integration test for issue `#31014`
• PR #31133: (cachedout) Fixup 31121
• PR #31125: (isbm) Force-kill websocket’s child processes faster than default two minutes.
• PR #31119: (sakateka) fixes for ipv6-only multi-master fallover
• PR #31107: (techhat) Don’t try to add a non-existent IP address
• PR #31108: (jitand) Changed npm integration test to install request.
• PR #31105: (cachedout) Lint 30975
• PR #31100: (jfindlay) states.x509: docs: peer.sls -> peer.conf
• PR #31103: (twangboy) Point to reg.delete_key_recursive
• PR #31093: (techhat) Ensure double directories don’t get created
• PR #31095: (ffindlay) modules.file, states.file: explain symbolic links
• PR #31061: (rallytime) Revert #30217 - was causing salt-cloud -a breakage
• PR #31090: (rallytime) Back-port #30542 to 2015.8
• PR #31085: (jacksontj) Correctly remove path we added after loader is completed
• PR #31037: (vutny) Update RHEL installation guide to reflect latest repo changes
• PR #31050: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #31053: (cachedout) Fix boto test failures
• PR #31029: (twangboy) Windows defaults to multiprocessing true
• PR #30998: (dmacvicar) add_key/reject_key: do not crash w/Permission denied: `'/var/cache/salt/master/.dfn'
• PR #31049: (twangboy) Fix versionadded in win_service.config
• PR #30987: (youngnick) Changed glusterfs.peer() module so state can handle localhost peering attempts.
• PR #31042: (moltob) Allow using Windows path in archive.extracted name attribute
• PR #31012: (terminalmage) Fix gitfs/git_pillar/winrepo provider to allow lowercase values
• PR #31024: (ffindlay) modules.aptpkg.upgrade: clarify dist-upgrade usage
• PR #31028: (twangboy) Fix config overwrite by windows installer
• PR #31031: (terminalmage) More complete fix for `#31014`
• PR #31026: (terminalmage) Fix regression when contents_pillar/contents_grains is a list.
• PR #30978: (garethgreenaway) fixes to state.py in 2015.8
• PR #30893: (bdrung) Make build reproducible
• PR #30945: (cachetivity) Note that pillar cli args are sent via pub
• PR #31002: (rmtmckenzie) Fix lxc cloud provided minion reporting present
• PR #31007: (jtand) Fixed rabbitmq_vhost test failure.
• PR #31004: (rallytime) Remove overstate docs and a few references.
• PR #30965: (anlutro) Fix rabbitmq_vhost.present result when test=True
• PR #30955: (Ch3LL) docs: add clarification when source is not defined
• PR #30941: (rallytime) Back-port #30879 to 2015.8
• PR #30940: (twangboy) Fix Build Process for OSX
• PR #30944: (jacobhammons) 2015.8.5 release notes linking and clean up
• PR #30905: (joeljulian) Add realpath to lvm.pvdisplay and use it in vg_present
• PR #30924: (yougnick) Fix small bug with starting volumes after creation.
• PR #30910: (cro) fix iDRAC state
• PR #30919: (garethgreenaway) Fixes to ssh_auth state module
• PR #30920: (jacobhammons) Versioned to 2015.8.5, added known issue `#30300` to release notes
• PR #30894: (terminalmage) git module/state: Handle identity files more gracefully
• PR #30750: (jfindlay) extract whole war version
• PR #30884: (rallytime) Move checks for private_key file existence and permissions to create function
• PR #30888: (ticosax) Backport #30797 to 2015.8
• PR #30895: (bdrung) Fix various typos
• PR #30889: (anlutro) Make msgpack an optional dependency in salt.utils.cache
• PR #30896: (vutny) Update nodegroups parameter examples in master config example and docs
• PR #30898: (abednarik) Fix pkg install with version.
• PR #30867: (rallytime) Pass in `pack` variable to utils.boto.assign_funcs function from ALL boto modules
• PR #30849: (jfindlay) utils.aws: use time lib to convert to epoch seconds
• PR #30874: (terminalmage) Fix regression in git_pillar when multiple remotes are configured
• PR #30850: (jfindlay) modules.dpkg._get_pkg_info: allow for ubuntu 12.04
• PR #30852: (replicant0wnz) Added more descriptive error message
• PR #30847: (terminalmage) Backport #30844 to 2015.8 branch
• PR #30860: (vutny) Correct installation documentation for RHEL-based distributions
• PR #30841: (jacobhammons) Release notes for 2015.8.5
• PR #30835: (terminalmage) Integration test for `#30820`.
• PR #30837: (jacobhammons) Added known issue `#30820` to release notes
• PR #30832: (rallytime) Add grains modules to salt modindex
• PR #30822: (rallytime) Make sure setting list_user_permissions to [', ', ''] doesn't stacktrace
• PR #30833: (terminalmage) Fix regression in scanning for state with `name' param
• PR #30823: (yannis666) Fix for mine to merge configuration on update.
• PR #30827: (jacobhammons) Version to 2015.8.4, added CVE 2016-1866 to release notes
• PR #30813: (anlutro) Properly set the default value for pillar_merge_lists
• PR #30826: (cachedout) Fix 30682
• PR #30818: (rallytime) Back-port #30790 to 2015.8
• PR #30815: (vutny) Pick right user argument for updating reactor function's low data
• PR #30747: (jfindlay) modules.lxc.running_systemd: use command -v not which
• PR #30800: (twangboy) Ability to handle special case installations
• PR #30794: (rallytime) A spelling fix and some spacing fixes for the boto_ec2 module docs
• PR #30756: (basepi) [2015.8] Fix two error conditions in the highstate outputter
• PR #30788: (rallytime) Fix incorrect doc example for delchasssislade_idrac state
• PR #30791: (Ch3LL) do not shadow ret function argument for salt.function
• PR #30726: (sjmbl) Fix improper use of yield in generator
• PR #30752: (terminalmage) Backport systemd and yum/dnf optimizations from develop into 2015.8
• PR #30759: (thusoy) Allow managing empty files
• PR #30758: (thusoy) Support mounting labelled volumes with multiple drives
• PR #30686: (cachedout) Master-side pillar caching
• PR #30675: (jfindlay) handle non-ascii minion IDs
• PR #30691: (rallytime) Make sure we use the `instance'' kwarg in cloud.action.
• PR #30713: (rallytime) Fix-up autodoc proxy modules for consistency
• PR #30741: (jfindlay) states.locale.__virtual__: return exec mod load err
• PR #30751: (basepi) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #30720: (clinta) x509.pem_managed does not return changes dict
• PR #30687: (clarkperkins) Setting `del_root_vol_on_destroy' changes the root volume type to `standard'
• PR #30673: (terminalmage) Properly derive the git_pillar cachedir from the id instead of the URL
• PR #30666: (cachedout) Fix grains cache
• PR #30623: (twangboy) Added service.config function
• PR #30678: (rallytime) Back-port #30668 to 2015.8
• PR #30677: (clarkperkins) Fix EC2 volume creation logic
• PR #30680: (cro) Merge forward from 2015.5, primarily for #30671
• PR #30663: (isbm) Zypper: latest version bugfix and epoch support feature
• PR #30652: (mew1033) Fix sh beacon
• PR #30657: (jfindlay) [2015.8] Backport #30378 and #29650
• PR #30656: (rallytime) [2015.8] Merge 2015.5 into 2015.8
• PR #30644: (tbaker57) Another go at fixing 30573
• PR #30611: (isbm) Bug fix: Zypper pkg.latest crash fix
• PR #30631: (rallytime) Refactor rabbitmq_cluster states to use test=true functionality correctly
• PR #30628: (rallytime) Refactor rabbitmq_policy states to use test=true functionality correctly
• PR #30624: (cro) Remove bad symlinks from osx pkg dir
• PR #30622: (rallytime) Add glance state to list of state modules
• PR #30618: (rallytime) Back-port #30591 to 2015.8
• PR #30625: (jfindlay) doc.topics.eauth: clarify client_acl vs eauth

37.2.12 Salt 2015.8.9 Release Notes

Version 2015.8.9 is a bugfix release for 2015.8.0.

Mint Linux: Important Post-Upgrade Instructions

As a result of some upstream changes, the os grain on Mint Linux is now being detected as LinuxMint (issue 33295). Run the following command after you upgrade to 2015.8.9 to reset the os grain to Mint and the os_family grain to Debian:

```
salt -G 'os:LinuxMint' grains.setvals "{'os': 'Mint', 'os_family': 'Debian'}"
```

Changes for v2015.8.8..v2015.8.9

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2016-05-17T17:09:39Z

Total Merges: 145

Changes:

• PR #33293: (twangboy) Fix minion start retry on Windows (2015.8)
• 22c4331 linux_acl: Allow `-` as a separation character in ACL permissions. Fixes `#31270` (#33172) (#33305)
• 7a18f2 Handle more ipv6 error as an exception `#33299` (#33300)
• eb47a1 Ignore retcode when checking service's status (#33294)
• PR #33274: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• 4f3596 Add comment for test=true w/o changes ret and add changes dict example (#33254)
• 2a30c4 Update Git Policy docs to match Contribution guide (#33252)
• 056c27 Fix `#33238` (#33239)
• 1cd34ab Properly report on invalid gitfs/git_pillar/winrepo repos (#33245)
• PR #33253: (rallytime) Update the release process docs
• 8c2c5b1 update 2015.8.9 release notes (#33251)
• 8ee8ee Handle ipv6 error as an exception (#33246)
• 855bed3 Check rendered YAML for invalid keys (#33213)
6fb25a8 Make note of files that begin with `_' in master.d or minion.d dirs (#33224)
• a6dc0d2 Gate jnpr imports in salt.proxy.junos.py (#33150)
• 64a89c4 Add docs for the http state (#33222)
• 0a32163 Don’t stacktrace when using --out=highstate at CLI during staterun. (#33215)
• 04d714d propagate opts to salt.util.http call (#33219)
• c8236c0 update 2015.8.9 release notes (#33237)
• PR #33217: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• 730bec1 [2015.8] Merge forward from 2015.5 to 2015.8 (#33207)
• 379b151 Add a fetch when compiling git_pillar for masterless minions (#33204)
• b3805d8 cloud.clouds.ec2: cache each named node (#33164)
• 86db5df Properly handle failed git commands when redirect_stderr=True (#33203)
• 8a0950d Don’t force use of global ssh_config when git identity file is specified (#33152)
• ce07133 update 2015.8.9 release notes (#33198)
• PR #33188: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• e9108e0 add 2015.8.9 release notes (#33161)
• 2d9919e [2015.8] Update to latest bootstrap script v2016.05.10 (#33156)
• 033bef2 Hash fileclients by opts (#33142)
• f520fa3 Back-port #31769 to 2015.8 (#33139)
• PR #33144: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• PR #33140: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• ad607ef If cache_jobs: True is set, populate the local job cache when running salt-call (#33100)
• 64689a6 Fix broken parsing of usermgmt.conf on OpenBSD (#33135)
• 06a382e Add a check that the cmdline of the found proc matches (#33129)
• 10018e9 salt.utils.gitfs: fix formatting for warning messages (#33064)
• d45b599 Fix 33058 (#33099)
• PR #33106: (abednarik) Moved _finger_fail method to parent class.
• 20c7e10 clarify docs that map is designed to be run once. is not stateful (#33102)
• 558561d cloud.query needs to define mapper.opts (#33098)
• PR #33096: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• 22a327b salt-cloud: fix ipv6-only virtual machines (#32865)
• e788f7e modules.npm: do not log npm --version at info level (#33084)
• PR #33081: (jfindlay) ssh docs: install py-2.6 for RHEL 5
• PR #33088: (ismb) Bugfix: Restore boolean values from the repo configuration
• 2c6326f fix tests for file.blockplace to remove newline (#33082)
• PR #32892: (ismb) Resolve Zypper locks on asynchronous calls
• 3e0bf23 Add fun_args to scheduled return data (part of `#24237`) (#33039)
• 264c0d4 Don't append a newline when creating new content with blockreplace (#33049)
• 54b783a Pass all data to batch.run() call when using --failhard (#33048)
• 2dbf5a5 Display command output when command fails with batch + failhard options (#33050)
• add9199 Allow security_groups kwarg for boto_elb.present to be string or list (#33053)
• 111701c [2015.8] Merge forward from 2015.5 to 2015.8 (#33054)
• 1066063 File and User test fixes for 2015.8 on Fedora23 (#33056)
• f97bd5 Back-port #33030 to 2015.8 (#33040)
• e90a501 Update the docs for saltutil.find_job to be more clear/accurate (#33017)
• d3d77ce Add saltenv to the cmd.script state function (#33031)
• 343f44 Fix syndic regression (#33021)
• 4eb3ca5 Compare uid and gid instead of name and group (#32674)
• 9ca5b02 Allow batch mode to use verbose option, as well as show_jid. (#32996)
• 81c0fa4 Fixed glusterfs.peer output (#32955)
• 8c70d7a Clarify some arg docs (#32994)
• 00feab Fix boto_secgroup_test (#32986)
• 3363267 fix user cron on solarish operating systems (#32970)
• 0733be salt.log.setup: process user args before format (#32796)
• b2d7ce81 doc.ref.states.ordering: clarify requisite change (#32934)
• df415d5 mode should default to `text' (#32928)
• f581a82 Remove FileClient class references from docs - it doesn't exist. (#32925)
• 31b96de Update contents_grains option with relevant docs (#32922)
• PR #32926: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• 1cd6a45 specify volume tags in profile configuration (#32908)
• 85ca86d Update docs to warn users that -1 isn't valid for iptables insert state (#32906)
• cb689d6 Allow profile options to be specified in provider file when using maps (#32900)
• 1a55fcb Clarify service state opening docs - uses `service' virtualname (#32880)
• PR #32884: (terminalmage) Fix incorrect deprecation notice
• PR #32878: (jacobhammons) added note about updating the bootstrap script in salt-cloud using th...
• PR #32869: (rallytime) Use correct config setting in cloud syndic docs
• PR #32844: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
• e86f6b Back-port #31139 to 2015.8 (#32868)
• 4bb545 backport PR #32732 for issue `#23714' (#32847)
• 5ea003b Add pyvmomi version warning to Getting Started with VMware docs (#32845)
• 44f8a0d Pass None as memory limit. (#32841)
• feebe69 Back-port #32813 to 2015.8 (#32839)
• 3b81031 various improvements on cloud deploy script docs (#32659)
- bf85987 update bootstrap to 2016.04.18 release (#32668)
- 83dee63 Back-port #29322 to 2015.8 (#32785)
- PR #32787: (rallytime) Back-port #32722 to 2015.8
- PR #32786: (rallytime) Back-port #32703 to 2015.8
- a6a42740 Merge branch `pr-32775` into 2015.8
- cda00f4 Improve documentation on pygit2 versions (#32779)
- 1d6d234 Properly handle minion failback failure. (#32749)
- 3751a27 Document pillar cache options (#32643)
- 35c8af3 modules.win_dacl: consistent case of dacl constants (#32720)
- 2cd0817 Update external auth documentation to list supported matcher. (#32733)
- bba089d Check dependencies type before applying str operations (#32693)
- 3aa0605 Handle when beacon not configured and we try to enable/disable them (#32692)
- PR #32718: (garethgreenaway) Fixes to schedule.list in 2015.8
- PR #32684: (captaininspiration) Fix routes for redhat < 6
- 7cdd512 Handle a couple of arguments better (Azure) (#32683)
- aaa03bc Fix for issue 32523 (#32672)
- 21081b1 Don't access deprecated Exception.message attribute. (#32556)
- 5d1e9a4 Lower log level for pillar cache (#32655)
- PR #32588: (anlutro) Fix salt-ssh module function call argument type juggling by JSON encoding them
- 5e7edfc yumpkg: Ignore epoch in version comparison for explicit versions without an epoch (#32563)
- fea6056 Fixing critical bug to remove only the specified Host instead of the entire Host cluster (#32640)
- 047f666 align OS grains from older SLES with current one (#32649)
- 8d46244 Prevent crash if pygit2 package is requesting re-compilation of the cache (#32652)
- PR #32614: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #32616: (rallytime) Back-port #32547 to 2015.8
- 3047471 Fix comments value in salt.states.pkgrepo example (#32604)
- ab9da90 Revert PR #32480 and apply #32314 with fixes / documentation (#32558)
- e84ec91 Better log message on minion restart if master couldn't be reached. (#32576)
- 3c81798 Don't return None from eval_master (#32555)
- PR #32536: (rallytime) Back-port #31898 to 2015.8
- d121c2 Fix binary search and replace (#32542)
- PR #32539: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #32531: (ticosax) [dockerng] Fix support of dockerng.volume_present when no volume is on present.
- 5d73d54 Enhance dockerng.wait() to control success on exit_code and on already stopped containers (#32475)
- 214f01e Bugfix: salt-key crashes if tries to generate keys to the directory w/o write access (#32436)
- 288839f Turn on exc_info when logging failed minion startup (#32515)
• 08a8020 Add ignore_epoch option to pkg.installed/removed/purged states (#32520)
• 492ebfc Isbm zypper list products sles11 crash (#32505)
• ae89882 Clear VCS fsbackend and git_pillar locks on master start (#32480)
• a6482a3 Use win32api to get Total System Memory (#32491)

PR #32487: (terminalmage) Add explanation of nonzero epoch requirement to pkg.installed state documentation

PR #32482: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8

f5bd6bd Backport 31164 and 31364 (#32474)

PR #32450: (cachedout) Pass parser options into batch mode

b299835 Issue `#28706`_: Fix state.user.present behavior. (#32448)

cef3d5 Argument name in docs should match actual arg name (#32445)

PR #32432: (ticosax) [dockerng] Fix Domainname introspection

PR #32427: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8

PR #32423: (jtand) Update glusterfs_test to be inline with #32312

PR #32425: (cachedout) Fix salt-cloud paralell provisioning

51fb2ac FreeBSD supports packages in format java/openjdk7 so the prior commit broke that functionality. Check freebsd/pkg`#1409`_ for more info.

709410a Improve git_pillar documentation/logging

c53efc3 Update master config docs

PR #32333: (mcalmer) fix sorting by latest version when called with an attribute

PR #32376: (amontalban) Fixes saltstack/salt`#28262`_

0d9a06b Cleaner deprecation process with decorators

6979fda Correctly index glusterfs bricks

PR #32393: (jjfindlay) modules.win_timezone: don’t list all zones in debug log

PR #32372: (rallytime) Back-port #32358 to 2015.8

PR #32392: (multani) Fix documentation on boto_asg and boto_elb modules and states

PR #32373: (cachedout) Resolve memory leak in authentication

PR #32126: (cro) Add a couple CLI examples for the highstate outpu

PR #32353: (mcalmer) Prevent metadata download when listing installed products

PR #32321: (abednarik) Better message when minion fail to start

PR #32345: (nmadhok) [2015.8] Check if profile key exists in vm_.dict

PR #32343: (Ferbla) Fixed win_wua example documentation

PR #32360: (rallytime) Make sure hash_type is lowercase in master/minion config files

PR #32361: (cro) SDB is no longer experimental

PR #32336: (rallytime) Back-port #28639 to 2015.8

PR #32332: (rallytime) Don’t unsubscribe from open events on the CLI too early on long-running commands

PR #32333: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
Salt Documentation, Release 2015.8.12

- **PR #32289**: (rallytime) New salt-cloud instances should not use old hash_type default.
- **PR #32291**: (twangboy) Fix bad output for chocolatey.version (fixes `#14277`)
- **PR #32295**: (rallytime) Test the contents of `deploy_scripts_search_path` in salt.config.cloud_config
- **PR #32315**: (ahust) fixing file.managed with requests lib
- **PR #32316**: (vutny) Update Salt Bootstrap tutorial
- **PR #32325**: (bdrung) Re-add shebang to ssh-id-wrapper shell script
- **PR #32326**: (bdrung) Fix typos
- **PR #32300**: (twangboy) Add documentation to disable winrepo/winrepo_ng
- **PR #32288**: (terminalmage) use dictupdate.merge instead of dict.update to merge CLI pillar overrides
- **PR #32243**: (isbm) Ensure latest pkg.info_installed ensure latest
- **PR #32268**: (ticosax) [dockerng] Improve detection for older versions of docker-py
- **PR #32258**: (jacobhammons) Replaces incorrect reference to master_alive_check
- **PR #32324**: (rallytime) Re-add shebang to ssh-id-wrapper shell script
- **PR #32326**: (bdrung) Fix typos
- **PR #32248**: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #32310**: (terminalmage) systemd.py: Support both update-rc.d and chkconfig as managers of sysv services
- **PR #32429**: (jacobhammons) Fixes windows download paths to account for patch
- **PR #32221**: (dmurphy18) Fix version check, fix extracting Major and Minor versions from __ver__
- **PR #32227**: (twangboy) Remove list2cmdline usage from win_service.py
- **PR #32329**: (anlutro) Add state file name to warning log line
- **PR #32215**: (DmitryKuzmenko) rhel oscodename
- **PR #32217**: (jacobhammons) 2015.8.8.2 release notes
- **PR #32212**: (rallytime) Back-port #32197 to 2015.8
- **PR #32211**: (rallytime) Back-port #32210 to 2015.8
- **PR #32209**: (rallytime) Back-port #32208 to 2015.8
- **PR #32204**: (ticosax) [dockerng] Consider labels carried by the image when comparing user defined labels.
- **PR #32186**: (rallytime) Add some ``best practices`` information to test documentation
- **PR #32176**: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- **PR #32163**: (rallytime) Update nacl.config docs to use key value instead of `None`
- **PR #32166**: (vutny) salt.states.file: correct examples with multiline YAML string
- **PR #32168**: (rallytime) Lint 2015.8
- **PR #32165**: (terminalmage) Make __virtual__ for rhservice.py more robust
- **PR #32160**: (cachedout) Fix beacon tutorial docs
- **PR #32145**: (paclat) fixes 29817
- **PR #32133**: (basepi) Pass eauth user/groups through salt-api to destination functions
- **PR #32127**: (rallytime) Add runners to __salt__ docs
- **PR #32143**: (DmitryKuzmenko) Set auth retry count to 0 if multimaster mode is failover.
Salt Documentation, Release 2015.8.12

- PR #32134: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #32091: (clarkperkins) Fixed the regression in 410da78
- PR #32135: (rallytime) [2015.8] Support multiple valid option types when performing type checks
- PR #31760: (sakateka) SMinion need wait future from eval_master
- PR #32106: (jfindlay) update suse master service patch
- PR #32130: (jacobhammons) Added known issues 32004 and 32044 to 2015.8.8 release notes
- PR #32105: (clarkperkins) Fixed invalid deploy_scripts_search_path
- PR #32117: (tomlaredo) Fixed validation type for file_ignore_glob
- PR #32113: (sakateka) Fix log message for AsyncAuth initialization
- PR #32116: (ticosax) Obtain default value of memory_swap from the container.
- PR #32098: (rallytime) Back-port #32083 to 2015.8
- PR #32099: (jacobhammons) 2015.8.8 release docs
- PR #32088: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- PR #32074: (Xiami2012) Fix code for proto args in modules.iptables
- PR #32053: (basepi) [2015.8] Fix rabbitmq_user.present tag handling
- PR #32023: (sbreidba) Move constant declaration into member variable to avoid issues when m...
- PR #32026: (techhat) Don't require the decode_out file to already exist
- PR #32019: (rallytime) Back-port #32012 to 2015.8
- PR #32015: (ticosax) [dockerng] Fix ports exposition when protocol is passed.
- PR #31999: (jacobhammons) Fixes a doc build exception caused by missing mocks for modules.win_dacl
- PR #31992: (notpeter) salt-cloud: add D2 and G2 EC2 instance types
- PR #31981: (lloydoliver) include rotational disks in grains under linux
- PR #31970: (twangboy) Add apply_template_on_contents for windows
- PR #31960: (aletourneau) fixed ec2 get_console_output
- PR #31958: (rallytime) [2015.8] Merge forward from 2015.5 to 2015.8
- 3934c66 Merge branch `2015.5' into `2015.8'
- PR #31935: (twangboy) Back port nullsoft build script from 2015.8
- PR #31912: (jfindlay) log.mixins: remove extermporaneous .record

37.2.13 Salt 2015.5.0 Release Notes - Codename Lithium

The 2015.5.0 feature release of Salt is focused on hardening Salt and mostly on improving existing systems. A few major additions are present, primarily the new Beacon system. Most enhancements have been focused around improving existing features and interfaces.

As usual the release notes are not exhaustive and primarily include the most notable additions and improvements. Hundreds of bugs have been fixed and many modules have been substantially updated and added.
**Warning:** In order to fix potential shell injection vulnerabilities in salt modules, a change has been made to the various `cmd` module functions. These functions now default to `python_shell=False`, which means that the commands will not be sent to an actual shell.

The largest side effect of this change is that ‘`shellisms`’, such as pipes, will not work by default. The modules shipped with salt have been audited to fix any issues that might have arisen from this change. Additionally, the `cmd` state module has been unaffected, and use of `cmd.run` in jinja is also unaffected. `cmd.run` calls on the CLI will also allow shellisms.

However, custom execution modules which use shellisms in `cmd` calls will break, unless you pass `python_shell=True` to these calls.

As a temporary workaround, you can set `cmd_safe: False` in your minion and master configs. This will revert the default, but is also less secure, as it will allow shell injection vulnerabilities to be written in custom code. We recommend you only set this setting for as long as it takes to resolve these issues in your custom code, then remove the override.

**Note:** Starting in this version of salt, `pillar_opts` defaults to False instead of True. This means that master opts will not be present in minion pillar, and as a result, `config.get` calls will not include master opts.

We recommend pillar is used for configuration options which need to make it to the minion.

**Beacons**

The beacon system allows the minion to hook into system processes and continually translate external events into the salt event bus. The primary example of this is the `inotify` beacon. This beacon uses inotify to watch configured files or directories on the minion for changes, creation, deletion etc.

This allows for the changes to be sent up to the master where the reactor can respond to changes.

**Sudo Minion Settings**

It is now possible to run the minion as a non-root user and for the minion to execute commands via sudo. Simply add `sudo_user: root` to the minion config, run the minion as a non-root user and grant that user sudo rights to execute salt-call.

**Lazy Loader**

The Lazy Loader is a significant overhaul of Salt's module loader system. The Lazy Loader will lazily load modules on access instead of all on start. In addition to a major performance improvement, this ‘`sandboxes`’ modules so a bad/broken import of a single module will only affect jobs that require accessing the broken module. (issue: 20274)

**Enhanced Active Directory Support**

The eauth system for LDAP has been extended to support Microsoft Active Directory out of the box. This includes Active Directory and LDAP group support for eauth.
Salt LXC Enhancements

The LXC systems have been overhauled to be more consistent and to fix many bugs. This overhaul makes using LXC with Salt much easier and substantially improves the underlying capabilities of Salt’s LXC integration.

Salt SSH

- Additional configuration options and command line flags have been added to configure the scan roster on the fly
- Added support for `state.single` in `salt-ssh`
- Added support for `publish.publish`, `publish.full_data`, and `publish.runner` in `salt-ssh`
- Added support for `mine.get` in `salt-ssh`

New Windows Installer

The new Windows installer changes how Salt is installed on Windows. The old installer used bbfreeze to create an isolated python environment to execute in. This made adding modules and python libraries difficult. The new installer sets up a more flexible python environment making it easy to manage the python install and add python modules.

Instead of frozen packages, a full python implementation resides in the bin directory (`C:\salt\bin`). By executing pip or easy_install from within the Scripts directory (`C:\salt\bin\Scripts`) you can install any additional python modules you may need for your custom environment.

The .exe's that once resided at the root of the salt directory (`C:\salt`) have been replaced by .bat files and should function the same way as the .exe's in previous versions.

The new Windows Installer will not replace the minion config file and key if they already exist on the target system. Only the salt program files will be replaced. `C:\salt\conf` and `C:\salt\var` will remain unchanged.

Removed Requests Dependency

The hard dependency on the requests library has been removed. Requests is still required by a number of cloud modules but is no longer required for normal Salt operations.

This removal fixes issues that were introduced with requests and salt-ssh, as well as issues users experienced from the many different packaging methods used by requests package maintainers.

Python 3 Updates

While Salt does not YET run on Python 3 it has been updated to INSTALL on Python 3, taking us one step closer. What remains is getting the test suite to the point where it can run on Python 3 so that we can verify compatibility.

RAET Additions

The RAET support continues to improve. RAET now supports multi-master and many bugs and performance issues have been fixed. RAET is much closer to being a first class citizen.
Modified File Detection

A number of functions have been added to the RPM-based package managers to detect and diff files that are modified from the original package installs. This can be found in the new pkg.modified functions.

Reactor Update

Fix an infinite recursion problem for runner/wheel reactor jobs by passing a `user` (Reactor) to all jobs that the reactor starts. The reactor skips all events created by that username -- thereby only reacting to events not caused by itself. Because of this, runner and wheel executions from the runner will have user `Reactor` in the job cache.

Misc Fixes/Additions

- SDB driver for etcd. (issue: 22043)
- Add `only_upgrade` argument to apt-based pkg.install to only install a package version if the package is already installed. (Great for security updates!)
- Joyent now requires a `keyname` to be specified in the provider configuration. This change was necessitated upstream by the 7.0+ API.
- Add `args` argument to cmd.script_retcode to match cmd.script in the cmd module. (issue: 21122)
- Fixed bug where TCP keepalive was not being sent on the defined interval on the return port (4506) from minion to master. (issue: 21465)
- LocalClient may now optionally raise SaltClientError exceptions. If using this class directly, checking for and handling this exception is recommended. (issue: 21501)
- The SAuth object is now a singleton, meaning authentication state is global (per master) on each minion. This reduces sign-ins of minions from 3->1 per startup.
- Nested outpuputer has been optimized, it is now much faster.
- Extensive fileserver backend updates.

Deprecations

- Removed `parameter` keyword argument from eeselect.exec_action execution module.
- Removed `runas` parameter from the following pip` execution module functions: install, uninstall, freeze, list_, list_upgrades, upgrade_available, upgrade. Please migrate to `user`.
- Removed `runas` parameter from the following pip state module functions: installed, removed, up-todate. Please migrate to `user`.
- Removed `quiet` option from all functions in cmdmod execution module. Please use `output_loglevel=quiet` instead.
- Removed `parameter` argument from eeselect.set_state. Please migrate to `module_parameter` or `action_parameter`.
- The `salt_events` table schema has changed to include an additional field called `master_id` to distinguish between events flowing into a database from multiple masters. If `event_return` is enabled in the master config, the database schema must first be updated to add the `master_id` field. This alteration can be accomplished as follows:

```
ALTER TABLE salt_events ADD master_id VARCHAR(255) NOT NULL;
```
Known Issues

- In multi-master mode, a minion may become temporarily unresponsive if modules or pillars are refreshed at the same time that one or more masters are down. This can be worked around by setting `auth_timeout` and `auth_tries` down to shorter periods.

37.2.14 Salt 2015.5.1 Release Notes

release 2015-05-20

Version 2015.5.1 is a bugfix release for 2015.5.0.

Changes:

- salt.runners.cloud.action() has changed the `fun` keyword argument to `func`. Please update any calls to this function in the cloud runner.

Extended Changelog Courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

PR #23989: *(rallytime)* Backport #23980 to 2015.5 @ 2015-05-20T19:33:41Z

  - PR #23980: (iggy) template: jinja2 -> jinja | refs: #23989
  - 117ecb1 Merge pull request #23989 from rallytime/bp-23980
  - 8f8557c template: jinja2 -> jinja

PR #23988: *(rallytime)* Backport #23977 to 2015.5 @ 2015-05-20T19:13:36Z

  - PR #23977: (ionutbalutoiu) Fixed glance image_create | refs: #23988
  - d4f1ba0 Merge pull request #23988 from rallytime/bp-23977
  - 46fc7c6 Fixed glance image_create

PR #23986: *(basepi)* [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-05-20T18:41:33Z

  - PR #23965: (hvnswetting) handle all exceptions gitpython can raise
  - 9566ed7 Merge pull request #23986 from basepi/merge-forward-2015.5
  - 0b78156 Merge remote-tracking branch `upstream/2014.7` into merge-forward-2015.5
  - 314e4db Merge pull request #23965 from hvnswetting/20147-fix-gitfs-gitpython-exception
  - 2576301 handle all exception gitpython can raise

PR #23985: *(UtahDave)* Add 2014.7.5-2 and 2015.5.0-2 Windows installer download links @ 2015-05-20T18:32:44Z

  - 9d1130e Merge pull request #23985 from UtahDave/2015.5local
  - 10338d0 Add links to Windows 2015.5.0-2 install downloads
  - b84f975 updated Windows 2014.7.5-2 installer download link

PR #23983: *(rallytime)* Versionadded tags for https_user and https_pass args new in 2015.5.0 @ 2015-05-20T18:05:27Z

  - ca7729d Merge pull request #23983 from rallytime/versionadded_git_options
  - 14aeae22 Versionadded tags for https_user and https_pass args new in 2015.5.0

PR #23970: *(jayeshka)* adding system unit test case @ 2015-05-20T17:12:57Z

  - b06df57 Merge pull request #23970 from jayeshka/system-unit-test
• 89eb008 adding system unit test case

PR #23967: (jayeshka) adding states/memcached unit test case  @ 2015-05-20T17:12:26Z
  38d5f75 Merge pull request #23967 from jayeshka/memcached-states-unit-test
  8ef9240 adding states/memcached unit test case

PR #23966: (jayeshka) adding states/modjk unit test case  @ 2015-05-20T17:11:48Z
  868e807 Merge pull request #23966 from jayeshka/modjk-states-unit-test
  422a964 adding states/modjk unit test case

PR #23942: (jacobhammons) Updates to sphinx saltstack2 doc theme  @ 2015-05-20T15:43:54Z
  6316490 Merge pull request #23942 from jacobhammons/2015.5
  31023c8 Updates to sphinx saltstack2 doc theme

PR #23874: (joejulian) Validate keyword arguments to be valid  @ 2015-05-20T04:53:40Z
  ISSUE #23872: (joejulian) create_ca_signed_cert can error if dereferenced dict is used for args | refs: #23874
  587957b Merge pull request #23874 from joejulian/2015.5_tls_validate_kwargs
  30102ac Fix py3 and ordering inconsistency problems.
  493f7ad Validate keyword arguments to be valid

PR #23960: (rallytime) Backport #22114 to 2015.5  @ 2015-05-20T03:04:37:09Z
  PR #22114: (dmyerscough) Fixing KeyError when there are no additional pages | refs: #23960
  00c5c22 Merge pull request #23960 from rallytime/bp-22114
  f3e1d63 Catch KeyError
  306b1ea Fixing KeyError
  6b2cda2 Fix PEP8 complaint
  239e50f Fixing KeyError when there are no additional pages

PR #23961: (rallytime) Backport #23944 to 2015.5  @ 2015-05-20T03:04:35:41Z
  PR #23944: (ryan-lane) Add missing loginclass argument to _changes call | refs: #23961
  4648b46 Merge pull request #23961 from rallytime/bp-23944
  970d19a Add missing loginclass argument to _changes call

PR #23948: (jfindlay) augeas.change state now returns changes as a dict  @ 2015-05-20T03:04:00:10Z
  0cb5cd3 Merge pull request #23948 from jfindlay/augeas_changes
  f09b80a augeas.change state now returns changes as a dict

PR #23957: (rallytime) Backport #23951 to 2015.5  @ 2015-05-20T03:04:24Z
  PR #23951: (ryan-lane) Do not check perms in file.copy if preserve | refs: #23957
  2d185f7 Merge pull request #23957 from rallytime/bp-23951
  996b431 Update file.py
  85d461f Do not check perms in file.copy if preserve

• PR #23956: (rallytime) Backport #23906 to 2015.5  @ 2015-05-20T03:04:14Z
- ISSUE #23839: (gladiatr72) wonky loader syndrome | refs: #23906
- ISSUE #23373: (tnypex) reactor/orchestrate race condition on salt['pillar.get'] | refs: #23906
- PR #23906: (gladiatr72) Added exception handler to trap the RuntimeError raised when Depends.enforce_dependency() class method fires unsuccessfully. There appears to be no synchronization within the Depends decorator class wrt the class global dependency_dict which results in incomplete population of any loader instantiation occurring at the time of one of these exceptions.
  - PR #23955: (rallytime) Backport #19305 to 2015.5 @ 2015-05-20T03:03:55Z
    - ISSUE #19852: (TaiSHiNet) DigitalOcean APIv2 can't delete machines when there is only 1 page | refs: #19305
    - ISSUE #19304: (TaiSHiNet) DigitalOcean API v2 cannot delete VMs on 2nd page | refs: #19305
    - PR #19305: (TaiSHiNet) Fixes droplet listing past page 1 | refs: #19305

  - 72fabc Adding states/timezone.py unit test
• PR #23862: (rahulhan) Adding states/tomcat.py unit tests @ 2015-05-18T17:02:10Z
  - 37b3ee5 Merge pull request #23862 from rahulhan/states_tomcat_unit_test
  - 65d7752 Adding states/tomcat.py unit tests
• PR #23860: (rahulhan) Adding states/test.py unit tests @ 2015-05-18T17:01:49Z
  - dde7207 Merge pull request #23860 from rahulhan/states_test_unit_test
  - 1f4c86 Adding states/test.py unit tests
• PR #23859: (rahulhan) Adding states/sysrc.py unit tests @ 2015-05-18T17:01:46Z
  - 3c9b813 Merge pull request #23859 from rahulhan/states_sysrc_unit_test
  - 6a903b0 Adding states/sysrc.py unit tests
• PR #23812: (rallytime) Backport #23790 to 2015.5 @ 2015-05-18T15:30:34Z
  - PR #23790: (aboe76) updated suse spec file to version 2015.5.0 | refs: #23812
  - 4cf30a7 Merge pull request #23812 from rallytime/bp-23790
- 3f65631 updated suse spec file to version 2015.5.0

- **PR #23811**: *(rallytime)* Backport #23786 to 2015.5 @ 2015-05-18T15:30:27Z
  - **PR #23786**: *(kaithar)* Log the error generated that causes returns.mysql.returner to except. | refs: #23811
  - c6f939a Merge pull request #23811 from rallytime/bp-23786
  - 346f30b Log the error generated that causes returns.mysql.returner to except.

- **PR #23850**: *(jayeska)* adding sysbench unit test case @ 2015-05-18T15:28:04Z
  - ce60582 Merge pull request #23850 from jayeska/sysbench-unit-test
  - 280abde adding sysbench unit test case

- **PR #23843**: *(The-Loeki)* Fix erroneous virtual:physical core grain detection @ 2015-05-18T15:24:22Z
  - 060902f Merge pull request #23843 from The-Loeki/patch-1
  - 9e2cf60 Fix erroneous virtual:physical core grain detection

- **PR #23816**: *(Snergster)* Doc for #23685 Added prereq, caution, and additional mask information @ 2015-05-18T15:18:03Z
  - ISSUE #23815: *(Snergster)* [beacons] inotify errors on subdir creation | refs: #23816
  - 3257a9b Merge pull request #23816 from Snergster/23685-doc-fix
  - 0fca49d Added prereq, caution, and additional mask information

- **PR #23832**: *(ahus1)* make saltify provider use standard bootstrap procedure @ 2015-05-18T02:18:29Z
  - **PR #23829**: *(ahus1)* make saltify provider use standard bootstrap procedure | refs: #23832
  - 3df3b85 Merge pull request #23832 from ahus1/ahus1_saltify_bootstrap_2015.5
  - f5b1734 fixing problem in unit test
  - cba47f6 make saltify to use standard bootstrap procedure, therefore providing all options like master_sign_pub_file

- **PR #23791**: *(optix2000)* Psutil compat @ 2015-05-16T04:05:54Z
  - 8ec4fb2 Merge pull request #23791 from optix2000/psutil_compat
  - 5470cf5 Fix pylint errors and sloppy inline comments
  - 64634b6 Update psutil.pid_list to use psutil.pids
  - 5dd6d69 Fix imports that aren't in __all__
  - 8a1da33 Fix test cases by mocking psutil_compat
  - 558798d Fix net_io_counters deprecation issue
  - 8140f92 Override unnecessary pylint errors
  - 7d02ad4 Fix some of the mock names for the new API
  - 9b3023e Fix overloaded getters/setters. Fix line lengths
  - 180eb87 Fix whitespace
  - f8edf72 Use new psutil API in ps module
  - e48982f Fix version checking in psutil_compat
  - 93ee411 Create compatibility psutil. psutil 3.0 drops 1.0 API, but we still support old psutil versions.
**PR #23782:** (terminalmage) Replace ``command -v`` with ``which`` and get rid of spurious log messages @ 2015-05-16T04:03:10Z

- 405517b Merge pull request #23782 from terminalmage/issue23772
- 0f6f239 More ignore_retcode to suppress spurious log msgs
- b4c48e6 Ignore return code in lxc.attachable
- 08658c0 Replace ``command -v`` with ``which``

**PR #23783:** (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-05-15T21:38:51Z

- ISSUE #22959: (highlyunavailable) Windows Salt hangs if file.directory is trying to write to a drive that doesn't exist
- ISSUE #22332: (rallytime) [salt-ssh] Add a check for host in /etc/salt/roster | refs: #23748
- ISSUE #16424: (stanvit) salt-run cloud.create fails with saltify
- PR #23748: (basepi) [2014.7] Log salt-ssh roster render errors more assertively and verbosely
- PR #23731: (twangboy) Fixes #22959: Trying to add a directory to an unmapped drive in windows
- PR #23730: (rallytime) Backport #23729 to 2014.7
- PR #23729: (rallytime) Partially merge #23437 (grains fix) | refs: #23730
- PR #23688: (twangboy) Added inet_ppton to utils/validate/net.py for ip.set_static_ip in windows
- PR #23488: (cellscape) LXC cloud fixes
- PR #23437: (cedwards) Grains item patch | refs: #23729
- cb2eb40 Merge pull request #23783 from basepi/merge-forward-2015.5
- 9df51ca __opts__get
- 51d23ed Merge remote-tracking branch `upstream/2014.7` into merge-forward-2015.5

* d9a0c3 Merge pull request #23488 from cellscape/lxc-cloud-fixes
  - 64250a6 Remove profile from opts after creating LXC container
  - c4047d2 Set destroy=True in opts when destroying cloud instance
  - 9e1311a Store instance names in opts when performing cloud action
  - 934bc57 Correctly pass custom env to lxc-attach
  - 7fb85f7 Preserve test=True option in cloud states
  - 9771b5a Fix detection of absent LXC container in cloud state
  - fb24f0c Report failure when failed to create/clone LXC container
  - 2d9aa2b Avoid shadowing variables in lxc module
  - 792e102 Allow overriding profile options in lxc.cloud_init_interface
  - 42bd64b Return changes on successful lxc.create from salt-cloud
  - 4409ab Return correct result when creating cloud LXC container
  - 377015c Issue #16424: List all providers when creating salt-cloud instance without profile
* 808be1 Merge pull request #23748 from basepi/salt-ssh.roster.host.check
  - bc53e04 Log entire exception for render errors in roster
  - 753de6a Log render errors in roster to error level
· e01a7a9 Always let the real YAML error through
  * 72cf360 Merge pull request #23731 from twangboy/fix_22959
    · 88e5495 Fixes #22959: Trying to add a directory to an unmapped drive in windows
  * 2610195 Merge pull request #23730 from rallytime/bp-23729
    · 1877cae adding support for nested grains to grains.item
  * 3e9df88 Merge pull request #23688 from twangboy/fix_23415
    · 6a91169 Fixed unused-import pylint error
    · 5e25b3f fixed pylint errors
    · 1a96766 Added inet_pton to utils/validate/net.py for ip.set_static_ip in windows

• PR #23781: (jfindlay) fix unit test mock errors on arch @ 2015-05-15T19:40:07Z

  - 6a2909e Removed errors
  - 4cde78a Adding states/vbox_guest.py unit tests
- **PR #23615**: (rallytime) Backport #23577 to 2015.5 @ 2015-05-12T21:19:11Z
  - **PR #23577**: (msciciel) Fix find and remove functions to pass database param | refs: #23615
  - 029ff11 Merge pull request #23615 from rallytime/bp-23577
  - 6f74477 Fix find and remove functions to pass database param
- **PR #23603**: (rahulhan) Adding states/winrepo.py unit tests @ 2015-05-12T18:40:12Z
  - b858953 Merge pull request #23603 from rahulhan/states_winrepo_unit_test
  - a66ee7e Adding states/winrepo.py unit tests
- **PR #23602**: (rahulhan) Adding states/win_path.py unit tests @ 2015-05-12T18:39:37Z
  - 3cbbd6d Merge pull request #23602 from rahulhan/states_win_path_unit_test
  - 122c29f Adding states/win_path.py unit tests
- **PR #23600**: (rahulhan) Adding states/win_network.py unit tests @ 2015-05-12T18:39:01Z
  - 3c904e8 Merge pull request #23600 from rahulhan/states_win_network_unit_test
  - b418404 removed lint error
  - 1be8023 Adding states/win_network.py unit tests
- **PR #23599**: (rahulhan) Adding win_firewall.py unit tests @ 2015-05-12T18:37:49Z
  - 102e3a7 Merge pull request #23599 from rahulhan/states_win_firewall_unit_test
  - 6c8a890 Adding win_firewall.py unit tests
- **PR #23601**: (basepi) Add versionadded for jboss module/state @ 2015-05-12T17:22:59Z
  - e73071d Merge pull request #23601 from basepi/jboss.version.added
  - 0174e8f Add versionadded for jboss module/state
- **PR #23469**: (soudnt3ch) Call the windows specific function not the general one @ 2015-05-12T16:47:22Z
  - 9beb7be Merge pull request #23469 from soudnt3ch/hotfix/call-the-win-func
  - 83e88a3 Call the windows specific function not the general one
- **PR #23583**: (jayeshka) adding states/ipset unit test case @ 2015-05-12T16:31:55Z
  - d2f9975 Merge pull request #23583 from jayeshka/ipset_states-unit-test
  - 4330cf4 adding states/ipset unit test case
- **PR #23582**: (jayeshka) adding states/keyboard unit test case @ 2015-05-12T16:31:17Z
  - 82a47e8 Merge pull request #23582 from jayeshka/keyboard_states-unit-test
- **PR #23581**: (jayeshka) adding states/keyboard unit test case  
  - 77e5b28 Merge pull request #23581 from jayeshka/layman_states-unit-test  
  - 297b055 adding states/layman unit test case

- **PR #23580**: (jayeshka) adding smf unit test case  
  - cbe3282 Merge pull request #23580 from jayeshka/smf-unit-test  
  - 4f97191 adding smf unit test case

- **PR #23572**: (The-Loeki) Fix regression of #21355 introduced by #21603 @ 2015-05-12T16:28:05Z  
  - ISSUE #21603: (ipmb) ssh_auth.present fails on key without comment | refs: #23572 #23572  
  - PR #21355: (The-Loeki) Fix for comments containing whitespaces  
  - 16a3338 Merge pull request #23572 from The-Loeki/ssh_auth_fix  
  - d8248dd Fix regression of #21355 introduced by #21603

- **PR #23565**: (garethgreenaway) fix to aptpkg module @ 2015-05-12T16:25:46Z  
  - ISSUE #23490: (lichtamberg) salt.modules.aptpkg.upgrade should have default `dist_upgrade=False` | refs: #23565  
  - f843f89 Merge pull request #23565 from garethgreenaway/2015_2_aptpkg_upgrade_default_to_upgrade  
  - 97ae514 aptpkg.upgrade should default to upgrade instead of dist_upgrade.

- **PR #23550**: (jfindlay) additional mock for rh_ip_test test_build_bond @ 2015-05-12T15:17:16Z  
  - ISSUE #23473: (terminalmage) unit.modules.rh_ip_test.RhipTestCase.test_build_bond is not properly mocked | refs: #23550  
  - c1157cd Merge pull request #23550 from jfindlay/fix_rh_ip_test

- **PR #23552**: (garethgreenaway) Fix for an issue caused by a previous pull request @ 2015-05-11T21:54:59Z  
  - b593328 Merge pull request #23552 from garethgreenaway/2015_5_returner_fix_broken_previous_pr
  - 7d70e2b Passed argumentes in the call _fetch_profile_opts to were in the wrong order

- **PR #23547**: (slinu3d) Added AWS v4 signature support for 2015.5 @ 2015-05-11T21:52:24Z  
  - d0f9682 Merge pull request #23547 from slinu3d/2015.5  
  - 3bfdb5 Fixed urlparse and urlencode calls  
  - 802dbdb Added AWS v4 signature support for 2015.5

- **PR #23544**: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-05-11T18:02:06Z

  - ISSUE #23159: (aneeshusa) Unused validator
  - ISSUE #20518: (ekle) module s3.get does not support eu-central-1 | refs: #23467  
  - ISSUE #563: (chutz) pidfile support for minion and master daemons | refs: #23460 #23461
  - PR #23538: (cro) Update date in LICENSE file
  - PR #23505: (aneeshusa) Remove unused ssh config validator. Fixes #23159.
  - PR #23467: (slinu3d) Added AWS v4 signature support
  - PR #23460: (s0undt3ch) [2014.7] Update to latest stable bootstrap script v2015.05.07
- PR #23444: (techhat) Add create_attach_volume to nova driver
- PR #23439: (techhat) Add wait_for_passwd_maxtries variable
- 06c6a1f Merge pull request #23544 from basepi/merge-forward-2015.5
- f8a36bc Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  * b79fed3 Merge pull request #23538 from cro/licupdate
    345efe2 Update date in LICENSE file
  * a123a36 Merge pull request #23505 from aneeshua/remove-unused-ssh-config-validator
    90af167 Remove unused ssh config validator. Fixes #23159.
  * ca2c21a Merge pull request #23467 from slinu3d/2014.7
    0b4081d Fixed pylint error at line 363
    5be5eb5 Fixed pylink errors
    e64f374 Fixed lint errors
    b9d1ac4 Added AWS v4 signature support
  * e6f9eecc Merge pull request #23444 from techhat/novacreateattach
    ebdb7ea Add create_attach_volume to nova driver
  * e331463 Merge pull request #23460 from s0undt3ch/hotfix/bootstrap-script-2014.7
    edcd0c4 Update to latest stable bootstrap script v2015.05.07
  * 7a8ce1a Merge pull request #23439 from techhat/maxtries
    0ad3ff2 Add wait_for_passwd_maxtries variable
- PR #23470: (twangboy) Fixed service.restart for salt-minion @ 2015-05-11T17:54:47Z
  - ISSUE #23426: (twangboy) Can’t restart salt-minion on 64 bit windows (2015.5.0) | refs: #23470

37.2.15 Salt 2015.5.10 Release Notes

Security Fix

CVE-2016-3176: Insecure configuration of PAM external authentication service

This issue affects all Salt versions prior to 2015.8.8/2015.5.10 when PAM external authentication is enabled. This issue involves passing an alternative PAM authentication service with a command that is sent to LocalClient, enabling the attacker to bypass the configured authentication service. Thank you to Dylan Frese <dmfrese@gmail.com> for bringing this issue to our attention.

This update defines the PAM eAuth service that users authenticate against in the Salt Master configuration. (No additional fixes are contained in this release).

Read Before Upgrading Debian 8 (Jessie) from Salt Versions Earlier than 2015.5.9

Salt systemctl service files are missing the following statement in these versions:

```
[Service]
KillMode=process
```

This statement must be added to successfully upgrade on these earlier versions of Salt.

37.2.16 Salt 2015.5.11 Release Notes

Version 2015.5.11 is a bugfix release for 2015.5.0.

Changes for v2015.5.10..v2015.5.11

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2016-05-20T21:02:38Z

Total Merges: 101

Changes:

• dc8ce2d Fix traceback in logging for config validation (#33386) (#33405)
• PR #33383: (thatch45) maintain the fallabck because I am totally sick of this crap
• 755acfb Improve doc clarity for disable_modules documentation (#33379)
• 2b5ad12 Better YAML syntax error handling (#33375)
• PR #33372: (jacobhammons) revved 2015.8 branch to .9 in version selector
- 55be0ab Expanded documentation for boto_elb state and module (#33341)
- 9b42a05 Added some more docs for master and minion config settings (#33292)
- 8acee5e Fix iptables --match-set (`#23643`) (#33301)
- 757ef20 fix `loose` typo (#33290)
- b7d98da Add auth_tries config option to minion.rst docs (#33287)
- 061851b Document minion_id_caching config value (#33282)
- 8fa72f6 Clarify file.replace MULTILINE flag interaction with regex anchors (#33137)
- 264ad34 Pip fix (#33180)
- 30868ab [2015.5] Update to latest bootstrap script v2016.05.11 (#33185)
- 878d34a Doc mock decorators (#33132)
- d4928c5 Use saltstack repo in buildpackage.py on CentOS 5 (#33080)
- 6d3e4e8 File and User test fixes for 2015.5 on Fedora23 (#33055)
- 3ec9502 Update ``Low Hanging Fruit`` to ``Help Wanted`` (#33045)
- 1d78924 Backport #33021 manually to 2015.5 (#33044)
- 398793b Fix minor document error of test.assertion (#33067)
- 09b072a Fix file.managed for Windows (#33181)
- f868329 Resolve issue with pkg module on Mint Linux (#33205)
- a09e1b6 Add pip installed and removed test (#33178)
- PR #33211: (cachedout) Don't try to kill a parent proc if we can't
- 8688329 Resolve issue with pkg module on Mint Linux (#33205)
- 30edead Lower display of msgpack failure msg to debug (#33078)
- d4928c5 Use saltstack repo in buildpackage.py on CentOS 5 (#33080)
- 6d3e4e8 File and User test fixes for 2015.5 on Fedora23 (#33055)
- 30868ab [2015.5] Update to latest bootstrap script v2016.05.11 (#33185)

37.2. Previous Releases
• c910b8d Fixing critical bug to remove only the specified Host instead of the entire Host cluster (#32639)
  • 4568565 Add _syspaths.py to .gitignore (#32638)
  • PR #32561: (gtmanfred) redact passwords and hashes from user.present updates
  • PR #32538: (rallytime) Back-port #32528 to 2015.5
  • 29333e5 Add documentation for some master/minion configs (#32454)
  • PR #32458: (terminalmage) Improve and clarify docs on provider overrides.
  • 0809126 Merge #32293 with test fixes (#32418)
  • bbd8260 Ignore Raspbian in service.py __virtual__ (#32421)
  • 690addf FreeBSD supports packages in format java/openjdk7 so the prior commit broke that functionality. Check freebsd/pkg`#1409`_ for more info.
  • PR #32399: (amontalban) Backport to fix `#28262`_ for 2015.5 as requested in PR #32376
  • PR #32374: (cachedout) Update proxmox documentation
  • PR #32339: (Ch3LL) remove reference to master_alive_check in 2015.5
  • PR #32284: (rallytime) Audit config.py default types and values
  • PR #32302: (terminalmage) Properly support packages with blank `Release` param in pkg.latest_version
  • PR #32162: (terminalmage) Properly handle yum/zypper repositories in pkgrepo.managed
  • PR #32223: (twangboy) Create minion.d directory on install for Windows
  • PR #3218: (cachedout) Only display error when tty is True in salt-ssh
  • PR #32196: (jtand) Fixed pylint error in app_pam_test.py
  • PR #32154: (Ch3LL) Add integration tests for salt-api using pam eauth
  • PR #32170: (gtmanfred) add name for lxc for use with cloud cache
  • PR #32164: (terminalmage) Make __virtual__ for rhservice.py more robust (2015.5 branch)
  • PR #32141: (palcat) fixes 32108
  • PR #32129: (terminalmage) Support multiple valid option types when performing type checks
  • PR #32056: (bstevenson) Fix list absent
  • PR #32096: (rallytime) Back-port #32065 to 2015.5
  • PR #32104: (jacobhammons) One additional known issue for 2015.5.10 release notes
  • PR #32100: (jacobhammons) 2015.5.10 release docs
  • PR #32038: (terminalmage) Improve state module docs, replace references to state.highstate/state.sls with state.apply
  • PR #32051: (terminalmage) Fix outputter for state.apply
  • PR #32002: (abednarik) Added Manajro Linux to virtual.
  • PR #31957: (rallytime) [2015.5] Merge forward from 2014.7 to 2015.5
  • PR #31972: (terminalmage) Make lack of python-ldap module more explicit when LDAP eauth is enabled
  • PR #31935: (twangboy) Back port nullsoft build script from 2015.8
  • PR #31912: (jfindlay) log.mixins: remove extemporaneous .record
  • PR #31825: (jtand) Updated .testing.pylintrc to match newer versions of pylint
• PR #31900: (rallytime) Add `python module` clarification to ps __virtual__ warning.
• PR #31878: (rallytime) Make sure __virtual__ error message is helpful when psutil is missing
• PR #31852: (rallytime) [2015.5] Merge forward from 2014.7 to 2015.5
• PR #31827: (gtmanfred) Remove ability of authenticating user to specify pam service
• PR #31810: (whiteinge) Fix outdated Jinja `env` variable reference
• PR #31744: (brejoc) Fix for AttributeError with libcloud <0.15
• PR #31750: (rallytime) Back-port #26170 to 2015.5
• PR #31689: (rallytime) Back-port #29467 to 2015.5
• PR #31687: (cachedout) Removed useless GPG tests
• PR #31660: (terminalmage) Assume pillar_opts is False when not specified in masterless mode
• PR #31683: (rallytime) Back-port #31578 to 2015.5
• PR #31682: (cachedout) Add definition of job cache to glossary
• PR #31658: (rallytime) Add mentioned of Salt's Coding Style docs to the Contributing docs
• PR #31655: (rallytime) Make note of pylint dependencies in docs
• PR #31440: (cachedout) Set correct type for master_tops config value
• PR #31622: (jfindlay) doc/topics/tutorials/http: update query decoding docs
• PR #31558: (cachedout) Don't stacktrace if ssh binary is not installed with salt-ssh
• PR #31521: (terminalmage) salt-ssh: Fix race condition when caching files to build the thin tarball
• PR #31497: (rallytime) Remove duplicate `timeout` definition in Roster docs
• PR #31472: (rallytime) Update contributing docs
• PR #31461: (DmitryKuzmenko) Set auth retry count to 0 if multimaster mode is failover.
• PR #31442: (sastorsl) Add os.path.exists(src) to file.py, def copy
• PR #31441: (cachedout) Include localhost minions in presence detection for runner
• PR #31416: (carlwgeorge) selinux module documentation fix
• PR #31336: (terminalmage) Improve config validation logging
• PR #31374: (sjorge) fix for #31369
• PR #31339: (jacobhammons) changed latest release to 2015.8.7
• PR #31288: (notpeter) Improve salt.states.ssh_known_hosts documentation.
• PR #31183: (heyfife) Fixed named external_ip reservation/re-use code in gce driver.
• PR #31032: (terminalmage) (2015.5 branch) yumpkg: ensure that dnf-plugins-core >= 0.1.15 is installed
• PR #31264: (sjorge) fix if_missing gets appended to dirs list, take III
• PR #31110: (cachedout) Fixup 30730
• PR #30974: (rallytime) Back-port #30949 to 2015.5
• PR #30942: (rallytime) Back-port #30897 to 2015.5
• PR #30922: (jacobhammons) Rev latest version to 2015.8.5
• PR #30865: (abednarik) Better boto elb error message.
• PR #30831: (jacobhammons) Updated readme
• PR #30829: (jacobhammons) Updated latest version to 2015.8.4
• PR #30784: (rallytime) Back-port #24952 to 2015.5
• PR #30764: (terminalmage) Work around yum versionlock's inability to remove holds by package name alone
• PR #30760: (toanj) Changed output format of arp_ip_target from list to comma delimited...
• PR #30757: (yannis666) Fix to mine update to merge configuration
• PR #30749: (abednarik) Fix Netwotk hostname Module in Debian systems.
• PR #30699: (abednarik) Add Retry to save_load.
• PR #30659: (sjmh) Fix lsscsi issues for certain platforms
• PR #30671: (techhat) Add file locking to cloud index
• PR #30586: (abednarik) Fix comment_line permissions.
• PR #30582: (terminalmage) yumpkg.check_db: run separate repoquery commands when multiple names passed
• PR #30548: (jacobhammons) Added placeholder release notes for 2015.5.10
• PR #30530: (terminalmage) 2015.5 tweaks from #30529
• PR #30484: (terminalmage) Backport DNF support to 2015.5 branch
• PR #30512: (jfindlay) disable pkgrepo test for ubuntu 15.10+
• PR #30478: (jtand) Updated pip_state to work with pip 8.0
• PR #30482: (borgstrom) Pyobjects recursive import support (for 2015.5)
• PR #30459: (jfindlay) modules.pkg: disable repo int test for ubuntu 15.10
• PR #30443: (jtand) Boto uses False for is_default instead of None
• PR #30420: (attiasr) Backport #26853
• PR #30364: (rallytime) Add TLS version imports and add linode driver documentation notices
• PR #30184: (rallytime) Back-port #30166 to 2015.5
• PR #30291: (thegoodduke) ipset: fix test=true & add comment for every entry

37.2.17 Salt 2015.5.2 Release Notes

release 2015-06-10
Version 2015.5.2 is a bugfix release for 2015.5.0.
Extended Changelog Courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):
PR #24346: (rallytime) Backport #24271 to 2015.5 @ 2015-06-03T18:44:31Z
PR #24271: (randybias) Fixed the setup instructions
refs: #24346
• 76927c9 Merge pull request #24346 from rallytime/bp-24271
• 04067b6 Fixed the setup instructions
PR #24345: *(rallytime)* Backport #24013 to 2015.5 @ 2015-06-03T18:39:41Z

 ISSUE #24012: *(jbq)* Enabling a service does not create the appropriate rc.d symlinks on Ubuntu

 refs: #24013

PR #24013: *(jbq)* Fix enabling a service on Ubuntu #24012

 refs: #24345

 • 4afa03d Merge pull request #24345 from rallytime/bp-24013
 • 16e0732 Fix enabling a service on Ubuntu #24012

PR #24365: *(jacobhammons)* Fixes for PDF build errors @ 2015-06-03T17:50:02Z

 • 0fc1902 Fixes for PDF build errors

PR #24313: *(nicholascapo)* Fix #22991 Correctly set result when test=True @ 2015-06-03T14:49:18Z

 ISSUE #22991: *(nicholascapo)* npm.installed ignores test=True * ae681a4 Merge pull request #24313 from nicholascapo/fix-22991-npm.installed-test-true * ac9644c Fix #22991 npm.installed correctly set result on test=True

PR #24312: *(nicholascapo)* Fix #18966: file.serialize supports test=True @ 2015-06-03T14:49:06Z

 ISSUE #18966: *(bechtoldt)* file.serialize ignores test=True * d57a9a2 Merge pull request #24312 from nicholascapo/fix-18966-file.serialize-test-true * e7328e7 Fix #18966 file.serialize correctly set result on test=True

PR #24302: *(jfindlay)* fix pkg hold/unhold integration test @ 2015-06-03T03:27:43Z

 • 6b694e3 Merge pull request #24302 from jfindlay/pkg_tests
 • c2db0b1 fix pkg hold/unhold integration test

PR #24349: *(rallytime)* Remove references to mount_points in ec2 docs @ 2015-06-03T01:54:09Z

 ISSUE #14021: *(mathrawka)* EC2 doc mentions mount_point, but unable to use properly

 refs: #24349

 • aca8447 Merge pull request #24349 from rallytime/fix-14021
 • a235b11 Remove references to mount_points in ec2 docs

PR #24328: *(dr4Ke)* Fix state grains silently fails 2015.5 @ 2015-06-02T15:18:46Z

 ISSUE #24319: *(dr4Ke)* grains state shouldn't fail silently * 88a997e Merge pull request #24328 from dr4Ke/fix_state_grains_silently_fails_2015.5 * 8a63d1e fix state grains silently fails #24319

 • ca1af20 grains state: add some tests

PR #24310: *(techat)* Add warning about destroying maps @ 2015-06-02T03:01:28Z

 ISSUE #24036: *(arthurlogilab)* [salt-cloud] Protect against passing command line arguments as names for the --destroy command

 refs: #24310

ISSUE #9772: *(s0undt3ch)* Delete VM’s in a map does not delete them all

 refs: #24310

 • 7dcd9bb Merge pull request #24310 from techhat/mapwarning
 • ca535a6 Add warning about destroying maps

PR #24281: *(steverweber)* lpmi docfix @ 2015-06-01T17:45:36Z
- 02bfb25 Merge pull request #24281 from steverweber/ipmi_docfix
- dd36f2c yaml formatting
- f6deef3 include api_kg kwarg in ipmi state
- a7d4e97 doc cleanup
- 0ded2fd save more cleanup to doc
- 08872f2 fix name api_key to api_kg
- 165a387 doc fix add api_kg kwargs
- 1ec7888 cleanup docs

PR #24287: *(jfindlay)* fix pkg test on ubuntu 12.04 for realz  @ 2015-06-01T14:16:37Z
  - 73cd2cb Merge pull request #24287 from jfindlay/pkg_test
  - 98944d8 fix pkg test on ubuntu 12.04 for realz

PR #24279: *(rallytime)* Backport #24263 to 2015.5  @ 2015-06-01T04:29:34Z
  PR #24263: *(cdarwin)* Correct usage of import_yaml in formula documentation
  refs: #24279
  - 02017a0 Merge pull request #24279 from rallytime/bp-24263
  - beff7c7 Correct usage of import_yaml in formula documentation

PR #24277: *(rallytime)* Put a space between after_jump commands  @ 2015-06-01T04:28:26Z
  ISSUE #24226: *(c4ursel)* iptables state needs to keep ordering of flags
  refs: #24277
  - 2ba696d Merge pull request #24277 from rallytime/fix_iptables_jump
  - e2d1606 Move after_jump split out of loop
  - d14f130 Remove extra loop
  - 42ed532 Put a space between after_jump commands

PR #24262: *(basepi)* More dictupdate after #24142  @ 2015-05-31T04:09:37Z
  PR #24142: *(basepi)* Optimize dictupdate.update and add #24097 functionality
  refs: #24262

PR #24097: *(kiorky)* Optimize dictupdate
  refs: #24142 #24142
  - 113eba3 Merge pull request #24262 from basepi/dictupdatefix
  - 0c4832c Raise a TypeError if non-dict types
  - be21aae PyLint
  - bb8a6c6 More optimization
  - c933249 py3 compat
  - ff6b2a7 Further optimize dictupdate.update()
  - c73f5ba Remove unused valtype

PR #24269: *(kiorky)* zfs: Fix spurious retcode hijacking in virtual  @ 2015-05-30T17:47:49Z
- 785d5a1 Merge pull request #24269 from makinacorpus/zfs
- 0bf23ce zfs: Fix spurious retcode hijacking in virtual

**PR #24257**: (jfindlay) fix pkg mod integration test on ubuntu 12.04 @ 2015-05-29T23:09:00Z
- 3d885c0 Merge pull request #24257 from jfindlay/pkg_tests
- 9508924 fix pkg mod integration test on ubuntu 12.04

**PR #24260**: (basepi) Fix some typos from #24080 @ 2015-05-29T22:54:58Z

**ISSUE #23657**: (arthurlogilab) [salt-cloud lxc] NameError: global name `__salt__' is not defined
refs: #24080 #23982

**PR #24080**: (kiorky) Lxc consistency2
refs: #24260 #23982 #24066

**PR #24066**: (kiorky) Merge forward 2015.5 -> develop
refs: #23982

**PR #24065**: (kiorky) continue to fix #23883
refs: #24080 #24066

**PR #23982**: (kiorky) lxc: path support
refs: #24080
- 08a1075 Merge pull request #24260 from basepi/lxtypos24080
- 0fa1ad3 Fix another lxc typo
- 669938f s/you ll/you'll/

**PR #24080**: (kiorky) Lxc consistency2
refs: #24260 #23982 #24066
@ 2015-05-29T22:51:54Z

**ISSUE #23657**: (arthurlogilab) [salt-cloud lxc] NameError: global name `__salt__' is not defined
refs: #24080 #23982

**PR #24066**: (kiorky) Merge forward 2015.5 -> develop
refs: #23982

**PR #24065**: (kiorky) continue to fix #23883
refs: #24080 #24066

**PR #23982**: (kiorky) lxc: path support
refs: #24080
- 75590cf Merge pull request #24080 from makinacorpus/lxc_consistency2
- 81f8067 lxc: fix old lxc test
- 45bf506 seed: lint
- 96b8d55 Fix seed.mkconfig yamldump
- 76f6d86 lxc/applynet: conservative
- ce7096f variable collision
- 8a8b28d lxc: lint
- 458b18b more lxc docs
- ef1f952 lxc docs: typos
- d67a43d more lxc docs
- 608da5e modules/lxc: merge resolution
- 27c4689 modules/lxc: more consistent comparison
- 07c365a lxc: merge conflict spotted
- 9993915 modules/lxc: rework settings for consistency
- ce11d83 lxc: Global doc refresh
- 61ed2f5 clouds/lxc: profile key is conflicting

PR #24247: (rallytime) Backport #24220 to 2015.5 @ 2015-05-29T21:40:01Z

ISSUE #24210: (damonnk) salt-cloud vsphere.py should allow key_filename param
refs: #24220

PR #24220: (djcrabhat) adding key_filename param to vsphere provider
refs: #24247
- da14f3b Merge pull request #24247 from rallytime/bp-24220
- 0b1041d adding key_filename param to vsphere provider

PR #24254: (rallytime) Add deprecation warning to Digital Ocean v1 Driver @ 2015-05-29T21:39:25Z

PR #22731: (dmyerscough) Decommission DigitalOcean APIv1 and have users use the new DigitalOcean APIv2
refs: #24254
- 21d6126 Merge pull request #24254 from rallytime/add_deprecation_warning_digitalocean
- cafe37b Add note to docs about deprecation
- eaf01e0 Add deprecation warning to digital ocean driver to move to digital_ocean_v2

PR #24252: (aboe76) Updated suse spec to 2015.5.1 @ 2015-05-29T21:38:45Z
- dac055d Merge pull request #24252 from aboe76/opensuse_package
- 0ad617d Updated suse spec to 2015.5.1

PR #24251: (garethgreenaway) Returners broken in 2015.5 @ 2015-05-29T21:37:52Z
- 49e7fe8 Merge pull request #24251 from garethgreenaway/2015_5_returner_brokenness
- 5df6b52 The code calling cfg as a function vs treating it as a dictionary and using get is currently back-
wards causing returners to fail when used from the CLI and in scheduled jobs.

PR #24255: (rallytime) Clarify digital ocean documentation and mention v1 driver deprecation @ 2015-05-
29T21:37:07Z

ISSUE #21498: (rallytime) Clarify Digital Ocean Documentation
refs: #24255
- bfb9461 Merge pull request #24255 from rallytime/clarify_digital_ocean_driver_docs
- 8d51f75 Clarify digital ocean documentation and mention v1 driver deprecation
PR #24232: *(rallytime)* Backport #23308 to 2015.5  @ 2015-05-29T21:36:46Z

PR #23308: *(thusoy)* Don’t merge: Add missing jump arguments to iptables module
refs: #24232

- 41f5756 Merge pull request #24232 from rallytime/bp-23308
- 2733f66 Import string
- 9097cca Add missing jump arguments to iptables module

PR #24245: *(Sacro)* Unset PYTHONHOME when starting the service  @ 2015-05-29T20:00:31Z

- a95982c Merge pull request #24245 from Sacro/patch-2
- 6632d06 Unset PYTHONHOME when starting the service

PR #24121: *(hvnsweeting)* deprecate setting user permission in rabbitmq_vhost.present  @ 2015-05-29T15:55:40Z

- 1504c76 Merge pull request #24121 from hvnsweeting/rabbitmq-host-deprecate-set-permission
- 2223158 deprecate setting user permission in rabbitmq_host.present

PR #24179: *(merll)* Changing user and group only possible for existing ids.  @ 2015-05-29T15:52:43Z

PR #24169: *(merll)* Changing user and group only possible for existing ids.
refs: #24179

- ba02f65 Merge pull request #24179 from Precis/fix-file-uid-gid-2015.0
- ee4c9d5 Use ids if user or group is not present.

PR #24229: *(msteed)* Fix auth failure on syndic with external_auth  @ 2015-05-29T15:04:06Z

ISSUE #24147: *(paclat)* Syndication issues when using authentication on master of masters.
refs: #24229

- 9bfb066 Merge pull request #24229 from msteed/issue-24147
- 482d1cf Fix auth failure on syndic with external_auth

PR #24234: *(jayeshka)* adding states/quota unit test case.  @ 2015-05-29T14:14:27Z

- 19fa43c Merge pull request #24234 from jayeshka/quota-states-unit-test
- c233565 adding states/quota unit test case.

PR #24217: *(jfindlay)* disable intermittently failing tests  @ 2015-05-29T03:08:39Z

ISSUE #40: *(thatch45)* Clean up timeouts
refs: #22857

PR #23623: *(jfindlay)* Fix /jobs endpoint’s return
refs: #24217

PR #22857: *(jacksontj)* Fix /jobs endpoint’s return
refs: #23623

- e15142c Merge pull request #24217 from jfindlay/disable_bad_tests
- 6b62804 disable intermittently failing tests

PR #24199: *(ryan-lane)* Various fixes for boto_route53 and boto_elb  @ 2015-05-29T03:02:41Z
Salt Documentation, Release 2015.8.12

- ce8e43b Merge pull request #24199 from lyft/route53-fix-elb
- d8de9a7 Better unit tests for boto_elb state
- 62f214b Remove cnames_present test
- 7b9ae82 Lint fix
- b74b0d1 Various fixes for boto_route53 and boto_elb

**PR #24142**: *(basepi)* Optimize dictupdate.update and add #24097 functionality
refs: #24262
@ 2015-05-29T03:00:56Z

**PR #24097**: *(kiorky)* Optimize dictupdate
refs: #24142 #24142

**PR #21968**: *(ryanwohara)* Verifying the key has a value before using it.
* a43465d Merge pull request #24142 from basepi/dictupdate24097
* 5c6e210 Deepcopy on merge_recurse
  - a13c84a Fix None check from #21968
  - 9ef2c64 Add docstring
  - 8579429 Add in recursive_update from #24097
  - 8599143 if key not in dest, don't recurse
  - d8a4b3 Rename klass to valtype

**PR #24208**: *(jayeshka)* adding states/ports unit test case.
@ 2015-05-28T23:06:33Z
- 526698b Merge pull request #24208 from jayeshka/ports-states-unit-test
- 657b709 adding states/ports unit test case.

**PR #24219**: *(jfindlay)* find zfs without modinfo
@ 2015-05-28T21:07:26Z

**ISSUE #20635**: *(dennisjac)* 2015.2.0rc1: zfs errors in log after update
refs: #24219
- d00945f Merge pull request #24219 from jfindlay/zfs_check
- 15d4019 use the salt loader in the zfs mod
- 5599b67 try to search for zfs if modinfo is unavailable

**PR #24190**: *(msteed)* Fix issue 23815
@ 2015-05-28T20:10:34Z

**ISSUE #23815**: *(Snergster)* [beacons] inotify errors on subdir creation
* 3dc4b85 Merge pull request #24190 from msteed/issue-23815
* 086a1a9 lint
  - 65de62f fix #23815
  - d04e916 spelling
  - db9f682 add inotify beacon unit tests

**PR #24211**: *(rallytime)* Backport #24205 to 2015.5
@ 2015-05-28T18:28:15Z

**PR #24205**: *(hazeslesque)* Docstring fix in salt.modules.yumpkg.hold
refs: #24211
- 436634b Merge pull request #24211 from rallytime/bp-24205
- 23284b5 Docstring fix in salt.modules.yumpkg.hold
PR #24212: *(terminalmage)* Clarify error in rendering template for top file  @ 2015-05-28T18:26:20Z
  - cc58624 Merge pull request #24212 from terminalmage/clarify-error-msg
  - ca807fb Clarify error in rendering template for top file

PR #24213: *(The-Loeki)* ShouldFix _- troubles in debian_ip  @ 2015-05-28T18:24:39Z
  ISSUE #23904: *(mbrgm)* Network config bonding section cannot be parsed when attribute names use dashes

  refs: #23917

ISSUE #23900: *(hashi825)* salt ubuntu network building issue 2015.5.0
  refs: #23922

PR #23922: *(garethgreenaway)* Fixes to debian_ip.py
  refs: #24213

PR #23917: *(corywright)* Split debian bonding options on dash instead of underscore
  refs: #24213
  - 9825160 Merge pull request #24213 from The-Loeki/patch-3
  - a68d515 ShouldFix _- troubles in debian_ip

PR #24214: *(basepi)* 2015.5.1release  @ 2015-05-28T16:23:57Z
  - 071751d Merge pull request #24214 from basepi/2015.5.1release
  - e5ba31b 2015.5.1 release date
  - 768494c Update latest release in docs

PR #24202: *(rallytime)* Backport #24186 to 2015.5  @ 2015-05-28T05:16:48Z
  PR #24186: *(thcipriani)* Update salt vagrant provisioner info
  refs: #24202
  - c2f1fd8 Merge pull request #24202 from rallytime/bp-24186
  - db793dd Update salt vagrant provisioner info

PR #24192: *(rallytime)* Backport #20474 to 2015.5  @ 2015-05-28T05:16:18Z
  PR #20474: *(djcrabhat)* add sudo, sudo_password params to vsphere deploy to allow for non-root deploys

  refs: #24192
  - 8a085a2 Merge pull request #24192 from rallytime/bp-20474
  - fd3c783 add sudo, sudo_password params to deploy to allow for non-root deploys

PR #24184: *(rallytime)* Backport #24129 to 2015.5  @ 2015-05-28T05:15:08Z
  PR #24129: *(pengyao)* Wheel client doc
  refs: #24184
  - 7cc535b Merge pull request #24184 from rallytime/bp-24129
  - 722a662 fixed a typo
  - 565eb46 Add cmd doc for WheelClient

PR #24183: *(rallytime)* Backport #19320 to 2015.5  @ 2015-05-28T05:14:36Z
PR #19320: (clan) add `state_output_profile' option for profile output
refs: #24183
  • eb0af70 Merge pull request #24183 from rallytime/bp-19320
  • 55db1bf sate_output_profile default to True
  • 9919227 fix type: statei -> state
  • 0549ca6 add `state_output_profile' option for profile output

PR #24201: (whiteinge) Add list of client libraries for the rest_cherrypy module to the top-level documentation
@ 2015-05-28T02:12:09Z
  • 1b5bf23 Merge pull request #24201 from whiteinge/rest_cherrypy-client-libs
  • 5f71802 Add list of client libraries for the rest_cherrypy module
  • 28fc77f Fix rest_cherrypy config example indentation

PR #24195: (rallytime) Merge #24185 with a couple of fixes  @ 2015-05-27T22:18:37Z
PR #24185: (jacobhammons) Fixes for doc build errors
refs: #24195
  • 3307ec2 Merge pull request #24195 from rallytime/merge-24185
  • d8daa9d Merge #24185 with a couple of fixes
  • 634d56b Fixed pylon error
  • 0689815 Fixes for doc build errors

PR #24166: (jayeshka) adding states/pkgng unit test case.  @ 2015-05-27T20:27:49Z
  • 7e400bc Merge pull request #24166 from jayeshka/pkgng-states-unit-test
  • 2234bb0 adding states/pkgng unit test case.

PR #24189: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-05-27T20:26:31Z
  • PR #24178: (rallytime) Backport #24118 to 2014.7, too.  PR #24159: (rallytime) Fill out modules/keystone.py CLI Examples
  PR #24158: (rallytime) Fix test_valid_docs test for tls module  PR #24118: (trevor-h) removed deprecated pymongo usage
refs: #24139 #24178
  • 9fcdad9 Merge pull request #24189 from basepi/merge-forward-2015.5
  • 8839e9c Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5
  • 9d7331e Merge pull request #24178 from rallytime/bp-24118
    • e2217a0 removed deprecated pymongo usage as no longer functional with pymongo > 3.x
  • 4e8c503 Merge pull request #24159 from rallytime/keystone_doc_examples
    • dadac8d Fill out modules/keystone.py CLI Examples
  • fc10ee8 Merge pull request #24158 from rallytime/fx_doc_error
    • 49a517e Fix test_valid_docs test for tls module

PR #24181: (jtand) Fixed error where file was evaluated as a symlink in test_absent  @ 2015-05-27T18:26:28Z
  • 2303dec Merge pull request #24181 from jtand/file_test
  • 5f0e601 Fixed error where file was evaluated as a symlink in test_absent
PR #24180: *(terminalmage)* Skip libvirt tests if not running as root  @ 2015-05-27T18:47Z

- a162768 Merge pull request #24180 from terminalmage/fix-libvirt-test
- 72e7416 Skip libvirt tests if not running as root

PR #24165: *(jayeshka)* adding states/portage_config unit test case.  @ 2015-05-27T15:08Z

- 1fbcc5b2 Merge pull request #24165 from jayeshka/portage_config-states-unit-test
- 8cf1505 adding states/portage_config unit test case.

PR #24164: *(jayeshka)* adding states/pecl unit test case.  @ 2015-05-27T14:26Z

- 4747856 Merge pull request #24164 from jayeshka/pecl-states-unit-test
- 563a5b3 adding states/pecl unit test case.

PR #24160: *(The-Loeki)* small enhancement to data module; pop()  @ 2015-05-27T13:10Z

- cd4aa19 Merge pull request #24160 from The-Loeki/patch-1
- 2175ff3 doc & merge fix
- eba382c small enhancement to data module; pop()

PR #24153: *(techhat)* Batch mode sometimes improperly builds lists of minions to process  @ 2015-05-27T21:53Z

- 4a8db6 Merge pull request #24153 from techhat/batchlist
- 467ba64 Make sure that minion IDs are strings

PR #24167: *(jayeshka)* adding states/pagerduty unit test case.  @ 2015-05-27T16:01Z

- ed8ccf5 Merge pull request #24167 from jayeshka/pagerduty-states-unit-test
- 1af8c83 adding states/pagerduty unit test case.

PR #24156: *(basepi)* [2015.5] Merge forward from 2014.7 to 2015.5  @ 2015-05-27T15:05:01Z

ISSUE #23464: *(tibold)* cmd_iter_no_block() blocks

refs: #24093

PR #24125: *(hvnsweeting)* Fix rabbitmq test mode PR #24093: *(msteed)* Make LocalClient.cmd_iter_no_block() not block PR #24008: *(davidjb)* Correct reST formatting for states.cmd documentation PR #23933: *(jacobhammons)* sphinx saltstack2 doc theme * b9507d1 Merge pull request #24156 from basepi/merge-forward-2015.5 * e52b5ab Remove stray >>>>>

- 7dfbd92 Merge remote-tracking branch `upstream/2014.7` into merge-forward-2015.5
  - cd3d2e0 Merge pull request #24125 from hvnsweeting/fix-rabbitmq-test-mode
    * 71862c6 enhance log
    * 28e2594 change according to new output of rabbitmq module functions
    * cd0212e processes and returns better output for rabbitmq module
  - 39a8f30 Merge pull request #24093 from msteed/issue-23464
    * fd35903 Fix failing test
    * 41b344c Make LocalClient.cmd_iter_no_block() not block
  - 5bfbd3d Merge pull request #24008 from davidjb/2014.7
    * 8b8d029 Correct reST formatting for documentation
- 1aa0420 Merge pull request #23933 from jacobhammons/2014.7
- a3613e6 removed numbering from doc TOC
- 78b737c removed 2015.7 release from release notes, updated index page to remove PDF/epub links
- e867f7d Changed build settings to use saltstack2 theme and update release versions.
- 81ed9c9 sphinx saltstack2 doc theme

PR #24145: (jfindlay) attempt to decode win update package  @ 2015-05-26T23:20:20Z

ISSUE #24102: (bormotov) win_update encondig problems
refs: #24145
  • 05745fa Merge pull request #24145 from jfindlay/win_update_encoding
  • cc5e17e attempt to decode win update package

PR #24123: (kiorky) fix service enable/disable change  @ 2015-05-26T21:24:19Z

ISSUE #24122: (kiorky) service.dead is no more stateful: services does not handle correctly enable/disable change state
refs: #24123
  • 7024789 Merge pull request #24123 from makinacorpus/ss
  • 2e2e1d2 fix service enable/disable change

PR #24146: (rallytime) Fixes the boto_vpc_test failure on CentOS 5 tests  @ 2015-05-26T20:15:19Z
  • 51c3ec Merge pull request #24146 from rallytime/fix_centos_boto_failure
  • ac0f97d Fixes the boto_vpc_test failure on CentOS 5 tests

PR #24144: (twangboy) Compare Keys ignores all newlines and carriage returns  @ 2015-05-26T19:25:48Z

ISSUE #24052: (twangboy) v2015.5.1 Changes the way it interprets the minion_master.pub file
refs: #24089 #24144

ISSUE #23566: (rks2286) Salt-cp corrupting the file after transfer to minion
refs: #24144 #23740

PR #23740: (jfindlay) Binary write
refs: #24144
  • 1c91a21 Merge pull request #24144 from twangboy/fix_24052
  • c197b41 Compare Keys removing all newlines and carriage returns

PR #24139: (rallytime) Backport #24118 to 2015.5  @ 2015-05-26T18:24:27Z

PR #24118: (trevor-h) removed deprecated pymongo usage
refs: #24139 #24178
  • 0841667 Merge pull request #24139 from rallytime/bp-24118
  • 4bb519b removed deprecated pymongo usage as no longer functional with pymongo > 3.x

PR #24138: (rallytime) Backport #24116 to 2015.5  @ 2015-05-26T18:23:51Z

PR #24116: (awdrius) Fixed typo in chown username (ending dot) that fails the command.
refs: #24138
- 742eca2 Merge pull request #24138 from rallytime/bp-24116
- 7f08641 Fixed typo in chown username (ending dot) that fails the command.

PR #24137: (rallytime) Backport #24105 to 2015.5 @ 2015-05-26T18:23:40Z

PR #24105: (cedwards) Updated some beacon-specific documentation formatting
  refs: #24137
  - e01536d Merge pull request #24137 from rallytime/bp-24105
  - f0778a0 Updated some beacon-specific documentation formatting

PR #24136: (rallytime) Backport #24104 to 2015.5 @ 2015-05-26T15:58:47Z

  ISSUE #23364: (pruiz) Unable to destroy host using proxmox cloud: There was an error destroying machines:
  501 Server Error: Method `DELETE /nodes/pmx1/openvz/openvz/100' not implemented

  PR #24104: (pruiz) Only try to stop a VM if it’s not already stopped. (fixes #23364)
  refs: #24136
  - 89cdf97 Merge pull request #24136 from rallytime/bp-24104
  - c538884 Only try to stop a VM if it’s not already stopped. (fixes #23364)

PR #24135: (rallytime) Backport #24083 to 2015.5 @ 2015-05-26T15:58:27Z

PR #24083: (swdream) fix code block syntax
  refs: #24135
  - 67c4373 Merge pull request #24135 from rallytime/bp-24083
  - e1d06f9 fix code block syntax

PR #24131: (jayeshka) adding states/mysql_user unit test case @ 2015-05-26T15:58:10Z
  - a83371e Merge pull request #24131 from jayeshka/mysql_user-states-unit-test
  - e1d06f9 adding states/mysql_user unit test case

PR #24130: (jayeshka) adding states/ntp unit test case @ 2015-05-26T15:57:29Z
  - 1dc1d2a Merge pull request #24130 from jayeshka/ntp-states-unit-test
  - ede4a9f adding states/ntp unit test case

PR #24128: (jayeshka) adding states/openstack_config unit test case @ 2015-05-26T15:56:08Z
  - 3943417 Merge pull request #24128 from jayeshka/openstack_config-states-unit-test
  - ca20e0f adding states/openstack_config unit test case

PR #24127: (jayeshka) adding states/npm unit test case @ 2015-05-26T15:55:18Z
  - 23f25c4 Merge pull request #24127 from jayeshka/npm-states-unit-test
  - c3ecabb adding states/npm unit test case

PR #24077: (anlutro) Change how state_verbose output is filtered @ 2015-05-26T15:41:11Z

  ISSUE #24009: (hvnsweeting) state_verbose False summary is wrong
  refs: #24077
  - 07488a4 Merge pull request #24077 from alprs/fix-outputter_highstate_nonverbose_count
  - 7790408 Change how state_verbose output is filtered

PR #24119: (jfindlay) Update contrib docs @ 2015-05-26T15:37:01Z
• 224820f Merge pull request #24119 from jfindlay/update_contrib_docs
• fa2d411 update example release branch in contrib docs
• a0b76b5 clarify git rebase instructions
• 3517e00 fix contribution docs link typos
• 651629c backport dev contrib doc updates to 2015.5

PR #23928: (joejulian) Add the ability to replace existing certificates  @ 2015-05-25T19:47:26Z
• 5488c4a Merge pull request #23928 from joejulian/2015.5_tls_module_replace_existing
• 4a4cbdd Add the ability to replace existing certificates

PR #24078: (jfindlay) if a charmap is not supplied, set it to the codeset  @ 2015-05-25T19:39:19Z

ISSUE #23221: (Reiner030) Debian Jessie: locale.present not working again
refs: #24078
• dd90ef0 Merge pull request #24078 from jfindlay/locale_charmap
• 5eb97f0 if a charmap is not supplied, set it to the codeset

PR #24088: (jfindlay) pkg module integration tests  @ 2015-05-25T19:39:02Z
• 9ece5d3 Merge pull request #24088 from jfindlay/pkg_tests
• f1bd5ec adding pkg module integration tests
• 739b2ef rework yumpkg refresh_db so args are not mandatory

PR #24089: (jfindlay) allow override of binary file mode on windows  @ 2015-05-25T19:38:44Z

ISSUE #24052: (twangboy) v2015.5.1 Changes the way it interprets the minion_master.pub file
refs: #24089 #24144
• 517552c Merge pull request #24089 from jfindlay/binary_write
• b2259a6 allow override of binary file mode on windows

PR #24092: (jfindlay) collect scattered contents edits, ensure it’s a str  @ 2015-05-25T19:38:10Z

ISSUE #23973: (mschiff) state file.managed: setting contents_pillar to a pillar which is a list throws exception instead giving
refs: #24092
• 121ab9f Merge pull request #24092 from jfindlay/file_state
• cfa0f13 collect scattered contents edits, ensure it’s a str

PR #24112: (The-Loeki) thin_gen breaks when thinner doesn’t exist  @ 2015-05-25T19:37:47Z
• 84e65de Merge pull request #24112 from The-Loeki/patch-1
• 34646ea thin_gen breaks when thinner doesn’t exist

PR #24108: (jayeshka) adding states/mysql_query unit test case  @ 2015-05-25T12:30:48Z
• ec509ed Merge pull request #24108 from jayeshka/mysql_query-states-unit-test
• ec50450 adding states/mysql_query unit test case

PR #24110: (jayeshka) adding varnish unit test case  @ 2015-05-25T12:30:21Z
• f2e5d6c Merge pull request #24110 from jayeshka/varnish-unit-test
- e119889 adding varnish unit test case

**PR #24109:** *(jayeshka)* adding states/mysql_grants unit test case  @ 2015-05-25T12:29:53Z

- 4fca2b4 Merge pull request #24109 from jayeshka/mysql_grants-states-unit-test
- 11a93cb adding states/mysql_grants unit test case

**PR #24028:** *(nleib)* send a disable message to disable puppet  @ 2015-05-25T04:02:11Z

- 6b43c9a Merge pull request #24028 from nleib/2015.5
- 15f24b4 update format of string in disabled msg
- 7690e5b remove trailing whitespaces
- 56a9720 Update puppet.py
- 9686391 Update puppet.py
- 33f3d68 send a disable message to disable puppet

**PR #24100:** *(jfindlay)* adding states/file unit test case  @ 2015-05-24T05:17:54Z

**PR #23963:** *(jayeshka)* adding states/file unit test case

refs: #24100

- 52c9aca Merge pull request #24100 from jfindlay/merge_23963
- 7d59deb adding states/file unit test case

**PR #24098:** *(galet)* Systemd not recognized properly on Oracle Linux 7  @ 2015-05-24T04:07:31Z

**ISSUE #21446:** *(dpheasant)* check for systemd on Oracle Linux

refs: #24098

- 0eb9f15 Merge pull request #24098 from galet/2015.5
- 4d6ab21 Systemd not recognized properly on Oracle Linux 7

**PR #24090:** *(jfindlay)* adding states/mount unit test case  @ 2015-05-22T23:02:57Z

**PR #24062:** *(jayeshka)* adding states/mount unit test case

refs: #24090

- 8e04db7 Merge pull request #24090 from jfindlay/merge_24062
- a81a922 adding states/mount unit test case

**PR #24086:** *(rallytime)* Backport #22806 to 2015.5  @ 2015-05-22T21:18:20Z

**ISSUE #22574:** *(unicolet)* error when which is not available

refs: #22806

**PR #22806:** *(jfindlay)* use cmd.run_all instead of cmd.run_stdout

refs: #24086

- c0079f5 Merge pull request #24086 from rallytime/bp-22806
- f728f55 use cmd.run_all instead of cmd.run_stdout

**PR #24024:** *(jayeshka)* adding states/mongodb_user unit test case  @ 2015-05-22T20:53:19Z

- 09de253 Merge pull request #24024 from jayeshka/mongodb_user-states-unit-test
- f31dc92 resolved errors
• d038b1f adding states/mongodb_user unit test case

PR #24065: (kiorky) continue to fix #23883
refs: #24080 #24066
@ 2015-05-22T18:59:21Z

ISSUE #23883: (kaithar) max_event_size seems broken * bfd812c Merge pull request #24065 from makinacorpusr/real23883 * 028282e continue to fix #23883

PR #24029: (kiorky) Fix providers handling @ 2015-05-22T16:56:06Z

ISSUE #24017: (arthurloliglab) [salt-cloud openstack] TypeError: unhashable type: `dict` on map creation

refs: #24029
• 429adfe Merge pull request #24029 from makinacorpus/fixproviders
• 412b39b Fix providers handling

PR #23936: (jfndlay) remove unreachable returns in file state @ 2015-05-22T16:26:49Z

• a42cccc Merge pull request #23936 from jfndlay/file_state
• ac29c0c also validate file.recurse source parameter
• 57f7388 remove unreachable returns in file state

PR #24063: (jayeshka) removed tuple index error @ 2015-05-22T14:58:20Z

• 8b69b41 Merge pull request #24063 from jayeshka/mount-states-module
• b9745d5 removed tuple index error

PR #24057: (rallytime) Backport #22572 to 2015.5 @ 2015-05-22T05:36:25Z

PR #22572: (The-Loeki) Small docfix for GitPillar
refs: #24057
• 02ac4aa Merge pull request #24057 from rallytime/bp-22572
• 49aad84 Small docfix for GitPillar

PR #24040: (rallytime) Backport #24027 to 2015.5 @ 2015-05-21T23:43:54Z

ISSUE #23088: (wfhg) Segfault when adding a Zypper repo on SLES 11.3
refs: #24027

PR #24027: (wfhg) Add baseurl to salt.modules.zypper.mod_repo
refs: #24040

• 82de059 Merge pull request #24040 from rallytime/bp-24027
• 37d25d8 Added baseurl as alias for url and mirrorlist in salt.modules.zypper.mod_repo.

PR #24039: (rallytime) Backport #24015 to 2015.5 @ 2015-05-21T23:43:25Z

PR #24015: (YanChii) minor improvement of solarisips docs & fix typos
refs: #24039
• d909781 Merge pull request #24039 from rallytime/bp-24015
• 6bfbaa94 minor improvement of solarisips docs & fix typos

PR #24038: (rallytime) Backport #19599 to 2015.5 @ 2015-05-21T23:43:10Z
ISSUE #19598: *(fayetted)* ssh_auth.present test=true incorrectly reports changes will be made

refs: #19599

PR #19599: *(fayetted)* Fix ssh_auth test mode, compare lines not just key

refs: #24038

• 4a0f254 Merge pull request #24038 from rallytime/bp-19599
• ea00d3e Fix ssh_auth test mode, compare lines not just key

PR #24046: *(rallytime)* Remove key management test from digital ocean cloud tests  @ 2015-05-21T22:32:04Z

• 42b87f1 Merge pull request #24046 from rallytime/remove_key_test
• 1d031ca Remove key management test from digital ocean cloud tests

PR #24044: *(cro)* Remove spurious log message, fix typo in doc  @ 2015-05-21T22:31:49Z

• eff54b1 Merge pull request #24044 from cro/pgjsonb
• de06633 Remove spurious log message, fix typo in doc

PR #24001: *(msteeed)* issue #23883  @ 2015-05-21T20:32:30Z

ISSUE #23883: *(kaithar)* max_event_size seems broken * ac32000 Merge pull request #24001 from msteeed/issue-23883 * bea97a8 issue #23883

PR #23995: *(kiorky)* Lxc path pre  @ 2015-05-21T17:26:03Z

• f7fae26 Merge pull request #23995 from makina corpus/lxc_path_pre
• 319282a lint
• 1dc67e5 lxc: version added
• fcad7cb lxc: states improvements
• 644bd72 lxc: more consistency for profiles
• 139372c lxc: remove merge cruft
• 725b046 lxc: Repair merge

PR #24032: *(kartiksubbarao)* Update augeas.cfg.py  @ 2015-05-21T17:03:42Z

ISSUE #16383: *(interjection)* salt.states.augeas.change example from docs fails with exception

refs: #24032

• 26d0851 Merge pull request #24032 from kartiksubbarao/augeas_insert_16383
• 3686dcd Update augeas.cfg.py

PR #24025: *(jayeshka)* adding timezone unit test case  @ 2015-05-21T16:50:53Z

• 55c9245 Merge pull request #24025 from jayeshka/timezone-unit-test
• 1ec33e2 removed assertion error
• 16ecb28 adding timezone unit test case

PR #24023: *(jayeshka)* adding states/mongodb_database unit test case  @ 2015-05-21T16:49:17Z

• e243617 Merge pull request #24023 from jayeshka/mongodb_database-states-unit-test
• 5a9ac7e adding states/mongodb_database unit test case

PR #24022: *(jayeshka)* adding states/modjk_worker unit test case  @ 2015-05-21T16:48:29Z
37.2.18 Salt 2015.5.3 Release Notes

Extended Changelog Courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2015-07-01T19:40:52Z

Statistics:
- Total Merges: 177
- Total Issue references: 81
- Total PR references: 231

Changes:
- PR #25096: (jfindlay) Postgres group test @ 2015-07-01T18:48:26Z
  - PR #24330: (jayeshka) adding states/postgres_group unit test case. | refs: #25096
  - 21709aa Merge pull request #25096 from jfindlay/postgres_group_test
  - 3c379dc declobber postgres state unit test mocking
  - a162ff4 adding states/postgres_group unit test case.
- PR #25085: (jfindlay) accept all sources in the file state @ 2015-07-01T18:23:45Z
  - ISSUE #25041: (wt) REGRESSION: pillar.get of integer fails to render in sls | refs: #25085
  - 0a84640 Merge pull request #25085 from jfindlay/fix_file
  - 937a252 remove unnecessary file state tests
  - 6f238e9 integration test file.managed sources
  - a5978d3 iterate an iterable source otherwise list+str it
- PR #25095: (jfindlay) Win groupadd unit tests @ 2015-07-01T18:18:53Z
  - PR #24207: (jayeshka) adding win_groupadd unit test case. | refs: #25095
- a983942 Merge pull request #25095 from jfindlay/win_groupadd_test
- 564dfed depend on win libs rather than mocking them
- 9b9eb8 resolved all errors.
- aaf8935 adding win_groupadd unit test case.

**PR #25089:** (jfindlay) fix minion sudo @ 2015-07-01T15:53:16Z
- ISSUE #21520: (jfindlay) sudo.salt_call is broken | refs: #25089
- PR #20226: (thatch45) Allow sudo priv escalation | refs: #25089
- 7c8d2a8 Merge pull request #25089 from jfindlay/fix_sudo
- d8f91d4 add some apprehension to the sudo exec module
- a9269c0 adding sudo exec module docs
- e4a40b7 comment whitespace in minion config
- 44cb167 adding sudo_user minion config docs
- d461060 adding sudo_user minion config to default

**PR #25099:** (driskell) Fix broken batch results @ 2015-07-01T15:51:29Z
- ISSUE #24875: (ahammond) ValueError: list.remove(x): x not in list in File `/usr/lib/python2.6/site-packages/salt/cli/batch.py`, line 179, in run active.remove(minion) | refs: #25099
- 4d6078e Merge pull request #25099 from driskell/patch-1
- 59b23e5 Fix broken batch results

**PR #25083:** (steverweber) ipmi: get_sensor_data would always fail @ 2015-06-30T20:57:21Z
- 4635079 Merge pull request #25083 from steverweber/fix_ipmi_stat
- 836f48c include _ in IpmiCommand
- 817e434 get_sensor_data would always fail

**PR #25067:** (The-Loeki) Fix for maxdepth=0 in find @ 2015-06-30T20:54:06Z
- 15f2a40 Merge pull request #25067 from The-Loeki/patch-1
- 61edadd3 Fix for maxdepth=0 in find

**PR #25078:** (terminalmage) Use smaller number for upper limit of mac_user's _first_avail_uid helper function @ 2015-06-30T20:53:24Z
- 58d933c Merge pull request #25078 from terminalmage/fix-mac-uid
- df2ab7e Use smaller number for upper limit of mac_user's _first_avail_uid helper function

**PR #25045:** (garethgreenaway) Fixes to debian_ip.py in 2015.5 @ 2015-06-30T17:36:43Z
- ISSUE #24521: (mutani) State network.managed fails on Debian (Jessie) | refs: #25045
- ebd6cd6 Merge pull request #25045 from garethgreenaway/24521_debian_networking
- 6f2a6c9 having proto default to static since it's needed to build the template.

**PR #25065:** (lorengordon) Add download links for 2015.5.1-3 and 2015.5.2 Windows installers @ 2015-06-30T15:29:31Z
- ISSUE #25057: (TheBigBear) why is there still no newer salt-minion for windows than ver. 2015.5.0-2? no 2015.5.1 or 2015.5.2?
- ae31b27 Merge pull request #25065 from lorengordon/update-windows-installer-links
- 40a0c13 Add download links for 2015.5.1-3 and 2015.5.2, Fixes #25057

**PR #25052:** (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-30T01:05:00Z
  - ISSUE #15209: (hubez) file.manage: source_hash not working with s3:// (2014.7.0rc1) | refs: #25011
  - PR #25011: (notpeter) Add s3 to protocols for remote source_hash (2014.7 backport)
  - ddaeb0f Merge pull request #25052 from basepi/merge-forward-2015.5
  - 2c5e664 Merge remote-tracking branch 'upstream/2014.7' into merge-forward-2015.5
  - a7154e7 Merge pull request #25011 from notpeter/s3_2014.7_backport
    * 8b8af64 Add s3 to protocols for remote source_hash

**PR #25038:** (jfindlay) versionadded @ 2015-06-29T19:49:27Z
  - PR #24747: (msciciel) add get_route function to network module | refs: #25038
  - c7003d4 Merge pull request #25038 from jfindlay/versionadded
  - d6dc69 versionadded

**PR #24747:** (msciciel) add get_route function to network module | refs: #25038 @ 2015-06-29T16:51:43Z
  - 28c87ca Merge pull request #24747 from msciciel/2015.5
  - 79b4ec2 network module lint fix
  - 0b6ef78 network module: fix for ipv6
  - f3d184c add get_route function to network module

**PR #24975:** (ryan-lane) Fix update of undefined env var in npm module @ 2015-06-29T16:45:05Z
  - 46a9677 Merge pull request #24975 from lyt/npm-module-fix
  - 6fde581 Try byte literals rather than unicode strings in the env
  - c8514de Fix update of undefined env var in npm module

**PR #24986:** (heewa) Don’t modify empty change @ 2015-06-29T16:44:17Z
  - 9cf8550 Merge pull request #24986 from heewa/fixed-pkg-hold-when-errored
  - d47a448 Don’t modify empty change

**PR #24999:** (rallytime) Provide a less confusing error when cloud provider is misconfigured @ 2015-06-29T16:43:31Z
  - ISSUE #24969: (bradhurber) salt-cloud 2015.5.0: missing azure dependency results in misleading error | refs: #24999
  - ece897d Merge pull request #24999 from rallytime/cloud_error_help
  - 1e81a88 Clean up
  - be19a67 Provide a less confusing error when cloud provider is misconfigured

**PR #24987:** (heewa) Don’t try to cache a template when it’s not a file @ 2015-06-29T14:02:59Z
  - 4af15cf Merge pull request #24987 from heewa/fixed-trying-to-cache-no-file
  - 9ae9e78 Don’t try to cache a template when it’s not a file

**PR #25022:** (jfindlay) revise label and milestone documentation @ 2015-06-29T13:51:24Z
  - 8eeaddb Merge pull request #25022 from jfindlay/label_docs
• PR #25029: (jayeshka) adding redismod unit test case. @ 2015-06-29T13:50:33Z
  - 89c2e01 Merge pull request #25029 from jayeshka/redismod-unit-test
  - e3045be adding redismod unit test case.

• PR #24995: (rallytime) Fix deprecated pymongo usage causing errors in latest pymongo @ 2015-06-27T22:28:56Z
  - PR #24175: (trevor-h) fix deprecated pymongo usage causing errors in latest pymongo | refs: #24995
  - 6425252 Merge pull request #24995 from rallytime/tops_mongo
  - a3c1063 fix deprecated pymongo usage causing errors in latest pymongo

• PR #24994: (garethgreenaway) Another Fix to gpg.py in 2015.5 @ 2015-06-27T22:28:15Z
  - ISSUE #24862: (dkatsanikakis) gpg.import_key returns error after successfully completed | refs: #24966 #24994
  - e9aa11 Merge pull request #24994 from garethgreenaway/2015_5_24862_gpg_import_key
  - d2f0d8f variable was referenced before assignment. Just removing the variable and checking the return from distutils.version.LooseVersion directly.

• PR #24988: (jayeshka) adding states/supervisord unit test case. @ 2015-06-27T22:24:42Z
  - eb6d66e Merge pull request #24988 from jayeshka/supervisord-states-unit-test
  - bb0a6d5 adding states/supervisord unit test case.

• PR #25007: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-26T21:28:57Z
  - ISSUE #24915: (jtand) Salt-cloud not working in 2014.7.6 | refs: #24944
  - PR #24944: (techhat) Double-check main_cloud_config
  - PR #24936: (jtand) Fixed ps module to not use depreciated psutil commands
  - 0487c3c Merge pull request #25007 from basepi/merge-forward-2015.5
  - 4980fd5 Merge remote-tracking branch `upstream/2014.7` into merge-forward-2015.5
  - a11ec6 Merge pull request #24944 from techhat/issue24915
    * 59c3081 Double-check main_cloud_config
    * d26a544 Merge pull request #24936 from jtand/psutil

• PR #25003: (jacobhammons) Updated man pages @ 2015-06-26T19:13:41Z
  - 91a60e1 Merge pull request #25003 from jacobhammons/man-pages
  - cf97a4a Updated man pages

• PR #25002: (jacobhammons) sphinx html theme updates @ 2015-06-26T18:39:14Z
  - a60a2e4 Merge pull request #25002 from jacobhammons/doc-announcements
  - f88f344 sphinx html theme updates

• PR #24977: (rallytime) Only warn about digital ocean deprecation if digital ocean is configured @ 2015-06-25T23:54:46Z
  - a791b23 Merge pull request #24977 from rallytime/do_move_warning
– 6b54422 Only warn about digital ocean deprecation if digital ocean is configured

• PR #24966: (garethgreenaway) Fixes to gpg.py in 2015.5 @ 2015-06-25T19:58:49Z
  – ISSUE #24862: (dkatsanikakis) gpg.import_key returns error after successfully completed | refs: #24966 #24994
  – a71c1b7 Merge pull request #24966 from garethgreenaway/2015_5_24862_gpg_import_key
  – 55eb73b fixing unit tests.
  – 80c24be Fixing an issue with the import_key method. Different results depending on which gnupg python module is installed.

• PR #24965: (jacksontj) Fix memory leak in saltndo @ 2015-06-25T18:48:03Z
  – ISSUE #24846: (mavenAtHouzz) Memory leak issue in rest_tornado EventListener | refs: #24965 #24994
  – 8622184 Merge pull request #24965 from jacksontj/2015.5
  – 4885e16 pylint
  – 87ada4 Fix memory leak in saltndo

• PR #24948: (jfindlay) fix some malformed doc links and anchors @ 2015-06-25T15:51:38Z
  – 773c4cf Merge pull request #24948 from jfindlay/doc_links
  – 152a9b2 fix some malformed doc links and anchors

• PR #24886: (anlutro) Be more careful about stripping away root_dir from directory options @ 2015-06-25T15:50:11Z
  – ISSUE #24885: (anlutro) Master config - Directories starting with a dot have the dot stripped when root_dir is . | refs: #24886
  – 4ebc01e Merge pull request #24886 from alprs/fix-root_dir_bug
  – 52c6a6d os.sep is the correct directory separator constant
  – 0ecb26 Be more careful about stripping away root_dir from directory options

• PR #24930: (jacksontj) Don’t refetch file templates 100% of the time-- Performance optimization for templated files @ 2015-06-24T21:22:47Z
  – f527e1 Merge pull request #24930 from jacksontj/2015.5
  – 5fb734 Only parse the source if we have one
  – c03a6fa Add support for sources of managed files to be local
  – 4c78a0 pylint
  – d70914e Don’t refetch the template 100% of the time-- Performance optimization for templated files

• PR #24935: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-24T18:17:54Z
  – PR #24918: (BretFisher) SmartOS SMF minion startup fix
  – PR #473: (whiteinge) Added a couple functions to work with the minion file cache | refs: #24918 #24935
  – 925a4d9 Merge pull request #24935 from basepi/merge-forward-2015.5
  – 881bf43 Merge remote-tracking branch ‘upstream/2014.7’ into merge-forward-2015.5
  – eeb05a1 Merge pull request #24918 from BretFisher/minion-start-smartos-smf-fix
    * d7bfa0c Smartos smf minion fix

• PR #24873: (jfindlay) convert osrelease grain to str before str op @ 2015-06-24T16:43:08Z
- **ISSUE #24826**: (rakai93) `rh_service.py`: `int` object has no attribute `startswith` | refs: #24873
- `4e8ed0d` Merge pull request #24873 from jfindlay/rh_service
- `febe6ef` convert osrelease grain to str before str op

- **PR #24923**: (jayeshka) adding states/status unit test case. @ 2015-06-24T15:50:07Z
  - `90819f9` Merge pull request #24923 from jayeshka/status-states-unit-test
  - `bae650` adding states/status unit test case.

- **PR #24902**: (cro) Fix minion failover, document same @ 2015-06-24T15:20:43Z
  - `2dd24ec` Merge pull request #24902 from cro/fxfo2
  - `90c73ff` References to documentation.
  - `f0e9204` Add references to failover parameters in conf
  - `9da96a8` Docs
  - `e2314f0` Move comment.
  - `b9a756f` Fix master failover and add documentation for same. Factor in syndics. Syndics will not failover (yet).

- **PR #24926**: (rallytime) Back-port #22263 to 2015.5 @ 2015-06-24T15:09:40Z
  - **PR #22263**: (cachedout) Prevent a load from being written if one already exists | refs: #24926
  - `087ee09` Merge pull request #24926 from rallytime/bp-22263
  - `8c92d9c` Prevent a load from being written if one already exists

- **PR #24900**: (rallytime) Back-port #24848 to 2015.5 @ 2015-06-24T15:09:18Z
  - **PR #24848**: (nmandhok) Correcting bash code blocks | refs: #24900
  - `b34a74f` Merge pull request #24900 from rallytime/bp-24848
  - `d2b5456` Correcting bash code blocks

- **PR #24899**: (rallytime) Back-port #24847 to 2015.5 @ 2015-06-24T15:09:01Z
  - **PR #24847**: (borutmrak) unset size parameter for lxc.create when backing=zfs | refs: #24899
  - `a546e8e` Merge pull request #24899 from rallytime/bp-24847
  - `1e4ec7a` unset size parameter for lxc.create when backing=zfs

- **PR #24898**: (rallytime) Back-port #24845 to 2015.5 @ 2015-06-24T15:06:09Z
  - **PR #24845**: (porterjames) fix bug in docker.loaded | refs: #24898
  - `d4dd8d2` Merge pull request #24845 from rallytime/bp-24845
  - `071049a` fix bug in docker.loaded

- **PR #24897**: (rallytime) Back-port #24839 to 2015.5 @ 2015-06-24T15:05:35Z
  - **ISSUE #24799**: (infestdead) Forced remount because options changed when no options changed (glusterfs)
  - **PR #24839**: (infestdead) fix for issue #24799 | refs: #24897
  - `f3b20d5` Merge pull request #24897 from rallytime/bp-24839
  - `6930855` fix for issue #24799

- **PR #24891**: (jayeshka) adding states/ssh_known_hosts unit test case. @ 2015-06-23T16:46:58Z
- 1650233 Merge pull request #24891 from jayeshka/ssh_known_hosts-states-unit-test
- ef1347f adding states/ssh_known_hosts unit test case.

**PR #24874:** (dkiser) Fix for salt-cloud when ssh key used to auth and using sudo. @ 2015-06-22T23:46:08Z

- ISSUE #24870: (dkiser) salt-cloud fails on sudo password prompt when using ssh key to auth | refs: #24874
- c32aae9 Merge pull request #24874 from dkiser/salt-cloud-24870
- 6c31143 Fix key error for the PR to fix #24870.
- bdcf7d8 Fix pylint for #24874.
- 8f66d19 Fix for salt-cloud when ssh key used to auth and using sudo.

**PR #24870:** (dkiser) Fix to allow password for salt-cloud to be set outside of a vm specific context @ 2015-06-22T23:44:59Z

- ISSUE #24871: (dkiser) salt-cloud fails to honor `password` in cloud options before raising an exception | refs: #24880
- ddaa21c Merge pull request #24880 from dkiser/salt-cloud-24871
- 4f6c035 Fix to allow password for salt-cloud to be set outside of a vm specific context.

**PR #24852:** (pruiz) Fix issue 24851: regular expression so it now matches packages with `.' or `-` at pkg name @ 2015-06-22T20:37:13Z

- 3902b16 Merge pull request #24852 from pruiz/issue-24851
- 73adb1d Fix regular expression so it now matches packages with `.' or `-` at pkg name.

**PR #24861:** (jayeshka) adding states/ssh_auth unit test case. @ 2015-06-22T16:20:01Z

- 6c5b788 Merge pull request #24861 from jayeshka/ssh_auth-states-unit-test
- e5d7b0d adding states/ssh_auth unit test case.

**PR #24824:** (kev009) Detect bhyve virtual type for FreeBSD guests @ 2015-06-22T15:24:35Z

- ISSUE #24378: (calvinhp) grains.get virtual reports `physical` on bhyve FreeBSD VM | refs: #24824
- 9e3321c Merge pull request #24824 from kev009/grains-bhyve-bsd
- a226209 Detect bhyve virtual type for freebsd guests

**PR #24795:** (anlutro) Fix state.apply for salt-ssh @ 2015-06-22T15:23:57Z

- ISSUE #24746: (anlutro) state.apply doesn’t seem to work | refs: #24795
- 7b07ef9 Merge pull request #24795 from alprs/fixed-salt_ssh_state_apply
- 905840b Fix state.apply for salt-ssh

**PR #24832:** (jacksontj) Don’t incur a ```_load_all``` of the lazy_loader while looking for mod_init. @ 2015-06-22T15:17:10Z

- PR #20540: (jacksontj) Loader nomerge: Don’t allow modules to ```merge``` | refs: #24832
- PR #20481: (jacksontj) Add submodule support to LazyLoader | refs: #20540
- PR #20473: (jacksontj) Add ```disabled``` support | refs: #20481
- PR #20274: (jacksontj) Loader overhaul to LazyLoader | refs: #20473
- PR #12327: (jacksontj) Add a LazyLoader class which will lazily load modules (with the given lo... | refs: #20274

2424 Chapter 37. Release notes
- 31d4c13 Merge pull request #24832 from jacksontj/2015.5
- cfa7c0a pylint
- be18439 Don't incur a ```_load_all``` of the lazy_loader while looking for mod_init.

- **PR #24834**: *(rallytime)* Back-port #24811 to 2015.5 @ 2015-06-19T18:43:49Z
  - ISSUE #14666: *(luciddr34m3r)* salt-cloud GoGrid exception when using map file | refs: #24811
  - PR #24811: *(rallytime)* Add notes to map and gogrid docs -- don't use -P with map files | refs: #24834
  - 2d8148f Merge pull request #24834 from rallytime/bp-24811
  - e2684ec Add notes to map and gogrid docs -- don't use -P with map files

- **PR #24790**: *(rallytime)* Back-port #24741 to 2015.5 @ 2015-06-19T17:25:58Z
  - PR #24741: *(CameronNemo)* Improve Upstart enable/disable handling | refs: #24790
  - d2ed6b3 Merge pull request #24790 from rallytime/bp-24741
  - a54245f Add missing import
  - 4ce6370 salt.modules.upstart: fix lint errors
  - aec53ec Improve Upstart enable/disable handling

- **PR #24789**: *(rallytime)* Back-port #24717 to 2015.5 @ 2015-06-19T17:00Z
  - PR #24717: *(gthb)* virtualenv.managed: document user and no_chown | refs: #24789
  - 645e62a Merge pull request #24789 from rallytime/bp-24717
  - 95ace2b virtualenv.managed: document user and no_chown

- **PR #24823**: *(jayeshka)* adding states/splunk_search unit test case. @ 2015-06-19T17:14:12Z
  - 0a6c70f Merge pull request #24823 from jayeshka/splunk_search-states-unit-test
  - 9883a8 adding states/splunk_search unit test case.

- **PR #24809**: *(jodv)* Correctly create single item list for failover master type with string value for master opt @ 2015-06-19T15:22:20Z
  - 4ce5a70 Merge pull request #24809 from jodv/single_item_master_list
  - 18ceebc single item list vs. list of characters

- **PR #24802**: *(basepi) [2015.5]* Merge forward from 2014.7 to 2015.5 @ 2015-06-18T20:11:58Z
  - ISSUE #24776: *(nmadhok)* --static option in salt raises ValueError and has been broken for a very long time | refs: #24777

- 39f088a Merge pull request #24778 from nmadhok/backport-2015.2-24777
- ae3701f Backporting PR #24777 to 2015.2 branch

- PR #24774: *(zefrog)* Fix lxc lvname parameter command @ 2015-06-18T14:49:06Z
  - 2a4f65f Merge pull request #24774 from zefrog/fixed-lxc-lvname-param
  - 21e0cd4 Fixed typo in lxc module: lvname parameter typo
  - 283d86e Fixed bug in lxc module: lvname using wrong parameter in cmd

- PR #24782: *(jayeshka)* adding states/slack unit test case. @ 2015-06-18T14:33:55Z
  - fd73390 Merge pull request #24782 from jayeshka/slack-states-unit-test
  - e2b6214 adding states/slack unit test case.

- PR #24771: *(jacksontj)* Always extend requisites, instead of replacing them @ 2015-06-18T14:29:09Z
  - ISSUE #24770: *(jacksontj)* Requisite and Requisite_in don't play nice together | refs: #24771
  - c9c90af Merge pull request #24771 from jacksontj/2015.5
  - b1211c5 Re-enable tests for complex prereq and prereq_in
  - 378f6bf Only merge when the merge is of requisites

- PR #24766: *(msteed)* Remove doc references to obsolete minion opt @ 2015-06-17T21:36:55Z
  - 5fe4de8 Merge pull request #24766 from msteed/undoc-dns_check
  - f92a769 Remove doc references to obsolete minion opt

- PR #24329: *(jayeshka)* adding states/postgres_database unit test case. | refs: #24798 @ 2015-06-17T19:11:02Z
  - a407ab7 Merge pull request #24329 from jayeshka/postgres_database-states-unit-test
  - ee06f1a adding states/postgres_database unit test case.

- PR #24632: *(jacobhammons)* Doc bug fixes @ 2015-06-17T18:40:02Z
  - ISSUE #24560: *(hydrosine)* Documentation missing on parameter | refs: #24632
  - ISSUE #24547: *(dragonpaw)* Artifactory docs say module is 'jboss7'. | refs: #24632
  - ISSUE #24375: *(companykitchen-dev)* Custom grain won't sync under any circumstances | refs: #24632
  - ISSUE #24275: *(kartiksubbarao)* augeas issue with apache and recognizing changes that have been already made | refs: #24632
  - ISSUE #24163: *(tbaker57)* enable_gpu_grains default value confusion | refs: #24632
  - 3ff6e3f Merge pull request #24632 from jacobhammons/bag-fixes
  - 7c52012 Fixed typos
  - c7cd41 Doc bug fixes Refs #24547 Refs #24275 Refs #24375 Refs #24560 Refs #24163

- PR #24607: *(garethgreenaway)* fixes to minion.py @ 2015-06-17T18:16:42Z
  - ISSUE #24198: *(ahammad)* salt-call event.send doesn't send events from minion | refs: #24607
- 9995fd4 Merge pull request #24607 from garethgreenaway/2015_5_sending_events_multi_master
- 8abd3f0 A fix if you have multiple masters configured and try to fire events to the minion. Currently they fail silently. Might be the cause of #24198.

**PR #24755:** (rallytime) Remove SALT_CLOUD_REQS from setup.py @ 2015-06-17T17:42:25Z
- bf2dd94 Merge pull request #24755 from rallytime/fix_setup_15
- 48769a5 Remove SALT_CLOUD_REQS from setup.py

**PR #24740:** (rallytime) Backport #24720 to 2015.5 @ 2015-06-17T16:43:37Z
- PR #24720: (TheScriptSage) Issue 24621 - AD/LDAP Group Auth Issue | refs: #24470
  - 3d53d79 Merge pull request #24740 from rallytime/bp-24720
  - a9bcb5 Updating master.py to properly check against groups when user is only authed against group. Tested against unit.auth_test.

**PR #24723:** (rallytime) Back-port #20124 to 2015.5 @ 2015-06-17T16:43:20Z
- PR #20124: (cgt) add init system to default grains | refs: #24723
  - ac2851b Merge pull request #24723 from rallytime/bp-20124
  - 4d0061b fix infinite loop introduced by #20124 when the init system is not in the supported_inits list
  - 0c7fa0f Optimizations for #20124
  - f353454 add init system to default grains (resolve #20124)

**PR #24754:** (anlutro) salt-cloud documentation - Add information about linode location @ 2015-06-17T16:04:48Z
- 78cd09b Merge pull request #24754 from alprs/docs-add_linode_location_option
  - d88e071 add information about linode location

**PR #24748:** (jayeshka) adding states/serverdensity_device unit test case. @ 2015-06-17T15:39:07Z
- d5554f7 Merge pull request #24748 from jayeshka/serverdensity_device-states-unit-test
  - 1a4c241 adding states/serverdensity_device unit test case.

**PR #24739:** (rallytime) Back-port #24735 to 2015.5 @ 2015-06-17T15:16:47Z
- PR #24735: (notpeter) Add 2015.5 codename to version numbers docs | refs: #24739
  - 0b7e7ef Merge pull request #24739 from rallytime/bp-24735
  - 64c565d Add .0 to version number
  - 5ed801b Add codenames for 2015.5 and future versions. Trailing newline.

**PR #24732:** (msteed) Fix stacktrace when --summary is used @ 2015-06-17T03:27:57Z
- ISSUE #24111: (yermulnik) cli option `--summary` got broken after upgrade to 2015.5.1 | refs: #24732
  - c8713f2 Merge pull request #24732 from msteed/issue-24111
  - 54b33dd Fix stacktrace when --summary is used

**PR #24721:** (rallytime) Back-port #24668 to 2015.5 @ 2015-06-17T03:23:47Z
- PR #24668: (grischa) enable virtual package names in pyobjects renderer | refs: #24721 #24757
  - 70d3781 Merge pull request #24721 from rallytime/bp-24668
  - 68fb5af fixing other test
- ba4f262 fixing text for virtual support in pyobjects
- b349d91 enable virtual package names in pyobjects renderer

**PR #24718:** *(rallytime)* Added some missing config documentation to the vsphere driver @ 2015-06-17T03:19:35Z
  - ISSUE #21923: *(Fluro)* Salt cloud not running provisioning script as root | refs: #24718
  - ISSUE #17241: *(hasues)* Salt-Cloud for vSphere needs additional documentation | refs: #24718
  - 1b9d689 Merge pull request #24718 from rallytime/update_vsphere_docs
  - bfdeb6 Added some missing config documentation to the vsphere driver

**PR #24714:** *(rallytime)* Remove cloud-requirements.txt @ 2015-06-17T03:17:04Z
  - 64857c7 Merge pull request #24714 from rallytime/remove_cloud_reqs_15
  - 67b796d Remove cloud-requirements.txt

**PR #24733:** *(msteed)* Include Tornado in versions report @ 2015-06-17T03:13:53Z
  - ISSUE #24439: *(bechtoldt)* Add tornado version to versions report | refs: #24733
  - f96b1d6 Merge pull request #24733 from msteed/issue-24439
  - 76cfef0 Include Tornado in versions report

**PR #24737:** *(jacksontj)* Move AES command logging to trace @ 2015-06-17T01:48:11Z
  - a861fe0 Merge pull request #24737 from jacksontj/2015.5
  - a4ed41a Move AES command logging to trace

**PR #24724:** *(basepi)* [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-16T22:46:27Z
  - ISSUE #24196: *(johnccfm)* Exception when using user.present with Windows | refs: #24646
  - PR #24646: *(twangboy)* Fixed user.present on existing user
  - 0d2dc46 Merge pull request #24724 from basepi/merge-forward-2015.5
  - 4641028 Merge remote-tracking branch `upstream/2014.7` into merge-forward-2015.5
  - a18dada Merge pull request #24646 from twangboy/fix_24196
    * a208e1d Fixed user.present on existing user

**PR #24701:** *(jayeshka)* adding states/selinux unit test case. @ 2015-06-16T15:27:29Z
  - 3d33fe7 Merge pull request #24701 from jayeshka/selinux-states-unit-test
  - 0c136fd adding states/selinux unit test case.

**PR #24687:** *(cachedout)* Note about minimum worker_threads @ 2015-06-15T20:46:23Z
  - 2e287a9 Merge pull request #24687 from cachedout/min_worker_threads
  - b7bb7ea Note about minimum worker_threads

**PR #24688:** *(cachedout)* Update AUTHORS @ 2015-06-15T20:46:03Z
  - 432478c Merge pull request #24688 from cachedout/update_authors
  - 3f6880e Better email
  - 6c7b773 Update AUTHORS

**PR #24649:** *(cachedout)* Improved error reporting for failed states @ 2015-06-15T16:04:20Z
 ISSUE #22385: *(cachedout)* States which require unavailable modules should display the reason | refs: #24649
- 9a2b50d Merge pull request #24649 from cachedout/issue_22385
- b9fe792 States will now return the reason behind failure if a module could not be loaded

- **PR #24673: *(jayeshka)*** adding states/schedule unit test case. @ 2015-06-15T15:24:52Z
  - 66e9e16 Merge pull request #24673 from jayeshka/schedule-states-unit-test
  - 54aaaa5 adding states/schedule unit test case.

- **PR #24663: *(kartiksubbarao)*** Update augeas_cfg.py @ 2015-06-15T15:48:48Z
  - ISSUE #24661: *(kartiksubbarao)* augeas.change doesn't support setting empty values | refs: #24663
  - 5eb19c4 Merge pull request #24663 from kartiksubbarao/patch-2
  - e18db50 Update augeas_cfg.py

- **PR #24667: *(dkiser)*** fix for #24583 clouds/openstack.py kerying first time succeeds @ 2015-06-14T21:58:58Z
  - ISSUE #24583: *(dkiser)* salt-cloud keyring password referenced before assignment | refs: #24667
  - 4450432 Merge pull request #24667 from dkiser/fix-cloud-keyring
  - c92c05f fix for #24583 clouds/openstack.py kerying first time succeeds

- **PR #24583: *(dkiser)*** Update aliases.py @ 2015-06-13T17:31:42Z
  - ISSUE #24537: *(kartiksubbarao)* alias.present doesn't update alias values that are substrings of the existing value | refs: #24537
  - 4c64ee9 Merge pull request #2459 from kartiksubbarao/patch-1
  - d68347t Update aliases.py

- **PR #24644: *(cro)*** Merge forward 2014.7->2015.5 @ 2015-06-12T21:31:41Z
  - **PR #24643: *(cro)*** Add reference to salt-announce mailing list
  - **PR #24620: *(twangboy)*** Fixed comment and uncomment functions in file.py
  - 89eb616 Merge pull request #24644 from cro/2014.7-2015.5-20150612
  - 4136dc3 Merge forward from 2014.7 to 2015.5
  - b99484f Merge pull request #24643 from cro/saltannounce
    * ecb0623 Add salt-announce mailing list.
  - 635121e Merge pull request #24620 from twangboy/fix_24215
    * d7a9999 Fixed comment and uncomment functions in file.py

- **PR #24642: *(basepi)*** Revert `fix target rule, remove unneeded quotation mark” @ 2015-06-12T20:14:26Z
  - **PR #24595: *(tankywoo)*** fix target rule, remove unneeded quotation mark | refs: #24595
  - b896a0d Merge pull request #2459 from saltstack/revert-24595-fix-iptables-target
  - 5ff3224 Revert `fix target rule, remove unneeded quotation mark”

- **PR #24628: *(jayeshka)*** adding states/reg unit test case. @ 2015-06-12T17:29:11Z
  - 01092c2 Merge pull request #24628 from jayeshka/reg_states-unit-test
  - af1bd8f adding states/reg unit test case.

- **PR #24631: *(rallytime)*** Back-port #24591 to 2015.5 @ 2015-06-12T16:54:32Z
- ISSUE #24494: (arnoutpierre) Computed comments in jinja states | refs: #24591
- ISSUE #24073: (primechuck) State.highstate uses stale grain data. | refs: #24492
- ISSUE #23359: (BalintSzigeti) init.sls parsing issue | refs: #24591
- ISSUE #21217: (Colstuwjx) Maybe a bug for jinja render? | refs: #24591
- PR #24591: (tbaker57) Add some documentation surrounding Jinja vs yaml comments - | refs: #24631
- PR #24492: (DmitryKuzmenko) Don’t remove grains from opts
  - 5f491f9 Merge pull request #24631 from rallytime/bp-24591
  - f13cd41 Add extra clarification why jinja comments are needed.
- 2374971 Fix typo
  - 6a91747 Add some documentation surrounding Jinja comments - refs #24492, #21217, #23359
- PR #24616: (garethgreenaway) additional logging in state.py module @ 2015-06-12T16:25:39Z
  - f23f99e Merge pull request #24616 from garethgreenaway/2015_5_logging_disabled_states
  - 4dbf0ef Adding some logging statement to give feedback when states, including highstate, are disabled. Useful when running from scheduler.
- PR #24595: (tankywoo) fix target rule, remove unneeded quotation mark | refs: #24642 @ 2015-06-12T16:23:22Z
  - 6dccbb0 Merge pull request #24595 from tankywoo/fix-iptables-target
  - 10a5160 fix target rule, remove unneeded quotation mark
- PR #24604: (jfindlay) fix pkg module integration tests @ 2015-06-12T16:04:26Z
  - 8ac3d94 Merge pull request #24604 from jfindlay/pkg_tests
  - d88fb22 fix pkg module integration tests on CentOS 5
  - fb91b40 fix pkg module integration tests on ubuntu 12
- PR #24600: (basepi) [2015.5] Remove __kwarg__ from salt-ssh keyword args @ 2015-06-12T04:21:29Z
  - 0ff545c Merge pull request #24600 from basepi/salt-ssh.orchestrater.20615
  - 9b55683 Remove __kwarg__ from salt-ssh keyword args
- PR #24608: (basepi) [2015.5] Normalize salt-ssh flat roster minion IDs to strings @ 2015-06-11T21:35:07Z
  - ISSUE #22843: (Xiol) salt-ssh roster doesn’t support integers as host keys | refs: #24608
  - 832916f Merge pull request #24608 from basepi/salt-ssh.flat.roster.integers.22843
  - 381820f Normalize salt-ssh flat roster minion IDs to strings
- PR #24605: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-11T19:15:21Z
  - PR #24589: (BretFisher) Fixed Mine example for jinja code block
  - 4eb5bb2 Merge pull request #24605 from basepi/merge-forward-2015.5
  - f96c502 Merge remote-tracking branch `upstream/2014.7` into merge-forward-2015.5
  - d83916f Merge pull request #24589 from BretFisher/patch-1
  - 65a1133 Fixed Mine example for jinja code block
- PR #24598: (jacobhammons) 2015.5.2 release changes @ 2015-06-11T17:24:11Z
  - ISSUE #24457: (ryan-lane) When selecting the version of docs on the docs site, it brings you to the homepage | refs: #24598
Salt Documentation, Release 2015.8.12

- ISSUE #24250: *(jfindlay)* have version links on docs page link to that version of the current page | refs: #24598
- e0bb177 Merge pull request #24598 from jacobhammons/doc-fixes
- f3f34dd 2015.5.2 release changesRefs #24250Refs #24457

- **PR #24588:** *(basepi)* Fixes for saltmod.function for salt-ssh @ 2015-06-11T16:21Z
  - ISSUE #20615: *(aurynn)* 2014.7.1: salt/states/saltmod using incorrect return dict for orchestrate | refs: #24588
  - 26930b4 Merge pull request #24588 from basepi/salt-ssh.orchestrate.20615
  - 826936c Move documentation into docstring instead of comments
  - de052e7 Assign `return` to `ret` if necessary in saltmod.function
  - 34f989 Convert keyword args to key=value strings in salt-ssh

- **PR #24593:** *(jayeshka)* adding states/redismod unit test case. @ 2015-06-11T15:55:27Z
  - 5a21ad1 Merge pull request #24593 from jayeshka/redismod_states-unit-test
  - 3b95744 adding states/redismod unit test case.

- **PR #24581:** *(rallytime)* Disabled some flaky tests until we can figure out how to make them more reliable @ 2015-06-11T15:51:41Z
  - ISSUE #40: *(thatch45)* Clean up timeouts | refs: #22857
  - PR #24217: *(jfindlay)* disable intermittently failing tests | refs: #24581
  - PR #23623: *(jfindlay)* Fix /jobs endpoint’s return | refs: #24217
  - PR #22857: *(jacksontj)* Fix /jobs endpoint’s return | refs: #23623
  - 8ff86e Merge pull request #24591 from rallytime/disable_some_flaky_tests
  - c82f135 Disabled some flaky tests until we can figure out how to make them more reliable

- **PR #24566:** *(jayeshka)* adding states/rdp unit test case. @ 2015-06-11T02:14:39Z
  - a570d7f Merge pull request #24566 from jayeshka/rdp_states-unit-test
  - 273b994 adding states/rdp unit test case.

- **PR #24551:** *(joejulian)* 2015.5 don’t pollute environment @ 2015-06-11T02:13:06Z
  - ISSUE #24480: *(kiorky)* [CRITICAL] [2015.5] tls breaks tzinfo | refs: #24551
  - 20ada1f Merge pull request #24551 from joejulian/2015.5_dont_pollute_environment
  - cfc3b43 Don’t pollute the TZ environment variable
  - cb9d3f pep8
  - 9cb7015 Mark keyword version adds
  - 76e2583 Merge tls changes from develop

- **PR #24574:** *(jacobhammons)*Refs #19901 @ 2015-06-10T20:09:23Z
  - ISSUE #19901: *(clinta)* State cache is not documented | refs: #24468
  - bb2f66a Merge pull request #24574 from jacobhammons/19901
  - e2a2946Refs #19901

- **PR #24577:** *(basepi)* [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-10T19:46:22Z
ISSUE #24427: (fayetted) 2015.5.1-3 Windows 64Bit Minion fails to start after install | refs: #24530

PR #24530: (twangboy) Start Minion Service on Silent Install

b03166c Merge pull request #24577 from basepi/merge-forward-2015.5

e1d45cc Merge remote-tracking branch `upstream/2014.7' into merge-forward-2015.5

d376390 Merge pull request #24530 from twangboy/fix_24427

* 673e1d8 Added missing panel.bmp for installer
* cc50218 Start Minion Service on Silent Install

PR #24571: (jacobhammons) Refs #24235 @ 2015-06-10T17:02:18Z

ISSUE #24235: (tomasfejfar) Difference between running from minion and from master | refs: #24468

3ec457b Merge pull request #24571 from jacobhammons/24235

PR #24565: (pille) fix backtrace, when listing plugins @ 2015-06-10T16:33:11Z

fe07e5b Merge pull request #24565 from pille/munin-ignore-broken-symlinks

8511a6c fix backtrace, when listing plugins

PR #24554: (ryan-lane) Fix yes usage for pecl defaults @ 2015-06-09T23:59:49Z

251c8f9 Merge pull request #24554 from lyf/pecl-module-fix

56a9cfc Fix yes usage for pecl defaults

PR #24535: (rallytime) Back-port #24518 to 2015.5 @ 2015-06-09T20:06:18Z

PR #24518: (rallytime) Merge #24448 with Pylint Fixes | refs: #24535

PR #24448: (codertux) Update modules path for operating systems using systemd | refs: #24518

dbd49b4 Merge pull request #24535 from rallytime/bp-24518

fc71979 Pylint fix

3e08840 Update modules path for operating systems using systemd

PR #24538: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-06-09T17:27:20Z

PR #24513: (jquast) bugfix use of `iteritem` in 2014.7 branch

PR #24511: (jquast) bugfix: trailing "...done" in rabbitmq output | refs: #24513

485ed3c Merge pull request #24538 from basepi/merge-forward-2015.5

  - ISSUE #24284: (kiorky) systemd lxc containers need use_vt=True at lxc-start stage | refs: #24348
  - PR #548: (Lanzaa) Salt is now platform dependent. Use get_python_lib(1) | refs: #24348
  - 86a3b31 Merge pull request #24348 from makinacorpus/lxcpre
  - 0cb11a2 lxc: typo
  - d71efa6 Try to close input pipes before calling lxc-start

### 37.2.19 Salt 2015.5.4 Release Notes

Version 2015.5.4 is a bugfix release for 2015.5.0.

Changes:

- The `cron.present` state now correctly defaults to state ID as identifier.

- When querying for VMs in `digital_ocean_v2.py`, the number of VMs to include in a page was changed from 20 (default) to 200 to reduce the number of API calls to Digital Ocean.

- The `vmware` Salt-Cloud driver was back-ported from the develop branch in order for installations of Salt that are older than 2015.8.0 to be able to use the `vmware` driver without stack-tracing on various deprecation paths that were implemented in the 2015.8.0 release.

**Changes for v2015.5.3..v2015.5.4**

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

  - PR #25657: (MrCitron) Add the ability to specify a base pattern for carbon returner
  - PR #25633: (AkhterAli) Update loader.py
- PR #25941: (jfindlay) add timelib to dependency versions @ 2015-08-03T12:23:42Z
- ISSUE #25850: (ssgward) Need to add packages to --versions-report | refs: #25941
- PR #25951: (garethgreenaway) Log when event.fire and event.fire_master fail. @ 2015-08-03T00:19:45Z
- PR #25942: (jfindlay) typo in minion doc @ 2015-07-31T23:34:55Z
  - ISSUE #25839: (twangboy) ALLUSERS=''1'' should be a default when installing MSI's | refs: #25848
- PR #25938: (jacobhammons) Doc on using syndic with multimaster @ 2015-07-31T23:05:05Z
  - PR #14690: (jacksontj) Multi syndic | refs: #25938
- PR #25877: (rallytime) Protect against passing a map file in addition to VM names with --destroy @ 2015-07-30T21:55:45Z
- PR #25890: (rallytime) Back-port #25698 to 2015.8 | refs: #25890
  - PR #25698: (AkhterAli) Update schedule.py
- PR #25894: (jacobhammons) Minor doc bug fixes @ 2015-07-30T23:02:34Z
ISSUE #24036: (arthurlogilab) [salt-cloud] Protect against passing command line arguments as names for the --destroy command in map files | refs: #25877

- PR #25870: (rallytime) Back-port #25824 to 2015.5 @ 2015-07-30T21:54:35Z
  - PR #25824: (klyr) Fix get_managed() in file.py module for local files | refs: #25870

- PR #25885: (torrant) Update Debian changelog @ 2015-07-30T20:05:59Z
  - PR #25824: (klyr) Fix get_managed() in file.py module for local files | refs: #25870

- PR #25875: (rallytime) Back-port #25862 to 2015.5 @ 2015-07-30T17:33:33Z
  - PR #25862: (zyio) Adding SCP_NOT_FOUND exit code | refs: #25875

- PR #25869: (rallytime) Back-port #25788 to 2015.5 @ 2015-07-30T17:33:33Z
  - ISSUE #24002: (csakoda) File lock contention on windows minions causing highstate crash | refs: #25788
  - PR #25788: (opdude) Catch a hard crash when running highstate on windows | refs: #25869

- PR #25853: (davidjb) Make ssh-id-wrapper accessible to non-root users @ 2015-07-30T16:49:47Z
  - ISSUE #19532: (stolendog) salt-ssh running git clone with not root user | refs: #25853

- PR #25856: (jfindlay) expand minion reauth scalability documentation @ 2015-07-30T15:33:17Z
  - ISSUE #25447: (spo0nman) SaltMaster is crippled with Minion Re-Authentication | refs: #25856

- PR #25840: (jfindlay) add note to winrepo state docs about required grain @ 2015-07-30T14:38:27Z
  - ISSUE #25801: (themalkolm) Update docs that salt.states.winrepo requires roles:salt-master in grains. | refs: #25840

- PR #25846: (jfindlay) rework deprecation documentation for release names @ 2015-07-30T13:26:21Z
  - ISSUE #25827: (0xf10e) "Deprecating Code" doesn't mention Usage of warn_until() w/ Release Names | refs: #25846

- PR #25833: (jahamm) Allows cp.push to recreate empty files @ 2015-07-29T16:48:48Z
  - ISSUE #23288: (UtahDave) cp.push fails to recreate empty files. | refs: #25833

- PR #25831: (rallytime) Add salt:// to key_url options to docs for pkgrepo.managed @ 2015-07-29T15:38:43Z
  - ISSUE #11474: (JensKanttil) pkgrepo.managed key_url: salt:// always use base env | refs: #25831

- PR #25807: (rallytime) Provide helpful error when using actions with a mapfile @ 2015-07-29T15:30:15Z
  - ISSUE #22699: (arthurlogilab) salt-cloud fails on KeyError when given a nonexistent action | refs: #25807

- PR #25818: (jfindlay) fix autoruns list @ 2015-07-29T15:29:20Z

- PR #25826: (anlutro) Check that ``onchanges`` is a list @ 2015-07-29T15:00:28Z

- PR #25798: (twangboy) Fixed stacktrace on package name not found @ 2015-07-28T22:40:14Z
  - ISSUE #25258: (nickw8) windows minion repo not updating | refs: #25798
• PR #25797: (twangboy) Changed repocache back to cached_repo @ 2015-07-28T22:39:32Z
  – ISSUE #25437: (loren gordon) Stacktrace on Windows when running pkg.list_pkgs | refs: #25598 #25763
  – PR #25763: (twangboy) Fix 25437 | refs: #25797
• PR #25793: (rallytime) Back-port #25730 to 2015.5 @ 2015-07-28T19:37:34Z
  – PR #25730: (sjorge) patchelf lives in pkgsrc | refs: #25799
• PR #25792: (rallytime) Back-port #25688 to 2015.5 @ 2015-07-28T19:37:17Z
  – PR #25688: (bclermont) Don’t acquire lock if there is no formatter | refs: #25792
• PR #25796: (cachedout) Remove debug from docs @ 2015-07-28T17:35:59Z
• PR #25749: (jahamn) Allow zpool.create on character devices @ 2015-07-28T16:01:40Z
  – ISSUE #24920: (voilex) module.zpool.create on character device is not possible by salt | refs: #25749
• PR #25685: (twangboy) Fixed regex issues with comment and uncomment @ 2015-07-28T15:29:27Z
• PR #25752: (thatch45) State top saltenv @ 2015-07-28T01:02:10Z
• PR #25755: (twangboy) Fixed problem with dunder functions not being passed @ 2015-07-27T19:31:22Z
  – ISSUE #25717: (twangboy) Problem with chocolatey module not loading | refs: #25755
• PR #25648: (twangboy) Clarified functionality of reg module, fixed state to work with new module @ 2015-07-27T19:30:33Z
  – ISSUE #25352: (m03) reg.absent reporting incorrect results | refs: #25648
  – ISSUE #1: (thatch45) Enable regex on the salt cli
• PR #25740: (rallytime) Back-port #25722 to 2015.5 @ 2015-07-27T16:08:40Z
  – ISSUE #25154: (uvsmtid) All data mixed on STDOUT together should generate valid JSON output | refs: #25722
  – ISSUE #25153: (uvsmtid) Multiple results should generate valid JSON output | refs: #25722
  – PR #25722: (uvsmtid) Minor docs changes to emphasize JSON output problems without --static option | refs: #25740
• PR #25739: (rallytime) Back-port #25709 to 2015.5 @ 2015-07-27T16:08:27Z
  – PR #25709: (colekowalski) add direct-io-mode to mount_invisible_options | refs: #25739
  – PR #25699: (rallytime) Back-port #25660 to 2015.5 | refs: #25709

2454 Chapter 37. Release notes
37.2.20 Salt 2015.5.5 Release Notes

Version 2015.5.5 is a bugfix release for 2015.5.0.

Changes:

- The `cron.present` state now correctly defaults to state ID as identifier.
- When querying for VMs in `digital_ocean_v2.py`, the number of VMs to include in a page was changed from 20 (default) to 200 to reduce the number of API calls to Digital Ocean.
- The `vmware` Salt-Cloud driver was back-ported from the develop branch in order for installations of Salt that are older than 2015.8.0 to be able to use the `vmware` driver without stack-tracing on various deprecation paths that were implemented in the 2015.8.0 release.

Changes for v2015.5.3..v2015.5.5

37.2. Previous Releases
Changes:

- **PR #26292**: (jquast) Rabbitmq 3.2.4 on Ubuntu has "...done.", not "...done" @ 2015-08-13T19:53:29Z
- **PR #26296**: (jquast) bugfix missing `runas=None' for rabbitmqctl cmds (backport to 2015.5) @ 2015-08-13T19:52:40Z
- **PR #26293**: (jfindlay) Fix #26268 @ 2015-08-13T19:48:06Z
- **ISSUE #26268**: (twangboy) Fix reg.py to work with the registry properly | refs: #26268
- **PR #26268**: (twangboy) Multiple improvements to reg executionmod and state mod | refs: #26293
- **PR #26290**: (rallytime) Don't stacktrace on query return in ec2.create_snapshot @ 2015-08-13T16:28:48Z
- **ISSUE #24484**: (codehotter) clouds/ec2.py: create_snapshot throws exception | refs: #26265
- **PR #26275**: (cachedout) Re-init modules on multi-master reconnect @ 2015-08-13T15:52:50Z
- **PR #26276**: (stanislavb) Remove explicit version from instance identity URL @ 2015-08-13T15:52:40Z
- **PR #26271**: (rallytime) Fix del_root_vol_on_destroy and del_all_vols_on_destroy functionality on ec2 @ 2015-08-12T23:22:47Z
- **ISSUE #24483**: (codehotter) clouds/ec2.py: del_root_vol_on_destroy and del_all_vols_on_destroy not working | refs: #26271
- **PR #26219**: (anlutro) cron: make identifier default to state ID @ 2015-08-12T18:42:33Z
- **ISSUE #25958**: (anlutro) Cron identifier does not default to state ID as documented | refs: #26219
- **PR #26257**: (rallytime) Back-port #26237 to 2015.5 @ 2015-08-12T18:40:35Z
- **ISSUE #26207**: (fullermd) group members setting fails with obscure error message on FreeBSD | refs: #26237
- **PR #26237**: (silenius) fix issue #26207 | refs: #26257
- **PR #26258**: (nmadhok) Fix permission on tests/runtests.py on 2015.5 branch @ 2015-08-12T18:40:04Z
- **PR #26261**: (nmadhok) Correct spelling of integration in docs @ 2015-08-12T18:14:48Z
- **PR #2015**: (thekuffs) Esky / bbfreeze support
- **PR #26247**: (nmadhok) Initial commit of unit tests for vmware cloud driver @ 2015-08-12T16:58:24Z
- **PR #26246**: (nmadhok) Backport additions to VMware cloud driver from develop to 2015.5 branch @ 2015-08-12T15:11:26Z
- **PR #26239**: (opdude) Fixed documentation to match function name @ 2015-08-12T14:48:52Z
- **PR #26232**: (garethgreenaway) Fix to trust_key in gpg module for 2015.5. @ 2015-08-12T04:48:27Z
- **PR #26084**: (twangboy) Added python_shell=True, quoted user input @ 2015-08-10T21:29:35Z
Salt Documentation, Release 2015.8.12

- ISSUE #25802: (jefftucker) Running module `npm.list` fails on Windows for masterless minion | refs: #26084
- PR #26183: (gor) Fix LDAP configuration issue. @ 2015-08-10T19:09:41Z
- PR #26186: (jacobhammons) regenerated man pages @ 2015-08-10T19:07:44Z
- PR #26182: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-08-10T19:00:10Z
- ISSUE #25961: (getabc) [2015.5.3-2] salt-winrepo.git/salt-minion.sls fails certificate `*.wpengine.com` or `wpengine.com` | refs: #26047
- ISSUE #25751: (basepi) Document `master_finger` more prominently | refs: #26088
- PR #26116: (corux) file.replace fails if repl string is an invalid regex and append/prepend is used
- PR #26088: (jacobhammons) Master finger
- PR #26047: (jacobhammons) Updated windows download links in the docs to https://repo.saltstack.com
- PR #26000: (driskell) Implement full event caching for subscribed tags @ 2015-08-10T18:57:17Z
- ISSUE #25998: (driskell) Event subsystem discarding required events during --batch breaking it for slow running commands | refs: #26000
- PR #26175: (rallytime) Back-port #26153 to 2015.5 @ 2015-08-10T18:22:32Z
- PR #26177: (loa) Fix dockerio state documentation typo | refs: #26175
- PR #26177: (rallytime) Back-port #26147 to 2015.5 @ 2015-08-10T18:22:01Z
- ISSUE #26024: (jpic) lxc_conf_unset in cloud.profile is ignored
- PR #26147: (martinhoefling) Fixes #26024 | refs: #26177
- PR #26178: (rallytime) Back-port #25404 to 2015.5 @ 2015-08-10T18:21:50Z
- ISSUE #21082: (clinta) master_type failover does not failover on DNS errors | refs: #25404
- PR #25404: (DmitryKuzmenko) Fixed minion failover to next master on DNS errors. | refs: #26178
- PR #26180: (jfindlay) fix processing of state.template @ 2015-08-10T18:21:38Z
- ISSUE #26112: (wt) state.template fails with unclear error with template with only an include | refs: #26180
- PR #26172: (nmadhok) [Backport] Make sure variable is a dictionary before popping something from it. @ 2015-08-10T16:42:50Z
- ISSUE #26162: (nmadhok) VMware cloud driver create function failing with traceback on latest develop | refs: #26163 #26172
- PR #26163: (nmadhok) Make sure variable is a dictionary before popping something from it.
- PR #26168: (cachedout) Fix slack docs @ 2015-08-10T14:57:18Z
- ISSUE #26098: (rdinoff) SALT.STATES.SLACK Doc update | refs: #26168
- PR #26127: (garethgreenaway) Fixes to salt.utils.http related to cp.get_file_str bug. @ 2015-08-10T14:38:25Z
- ISSUE #24106: (nvx) fileclient.py#get_url ignores HTTP Auth again (2015.5 regression) | refs: #26127
- PR #26140: (nmadhok) VMware cloud driver fixes @ 2015-08-10T13:15:58Z
- ISSUE #26141: (nmadhok) salt-cloud VMware driver fails with error in parsing configuration file | refs: #26140
- ISSUE #25809: (o-sleep) vmware cloud module error message | refs: #26140

37.2. Previous Releases 2457
– ISSUE #25625: (steverweber) cloud vmware driver does not provide mac_address unless vmware tools is running | refs: #26137 #26140

• PR #26137: (steverweber) use device mac address if vmtools not active @ 2015-08-09T03:05:36Z

  

– ISSUE #25625: (steverweber) cloud vmware driver does not provide mac_address unless vmware tools is running | refs: #26137 #26140

• PR #26119: (jodv) Backport eauth bugfix to 2015.5 @ 2015-08-09T02:19:52Z

• PR #26135: (cro) Fix proxy minions in 2015.5 and significantly update documentation. @ 2015-08-09T02:19:21Z

• PR #26132: (anlutro) Better error messages when virtualenv creation fails @ 2015-08-09T02:05:34Z

• PR #26133: (amontalban) Fixed #25915 in salt/modules/pkgng.py and salt/states/pkg.py @ 2015-08-08T21:05:05Z

• PR #26111: (anlutro) FreeBSD pkg install fails @ 2015-08-07T21:42:09Z

• PR #26106: (jfindlay) fix autoruns.list looking in wrong directory @ 2015-08-06T18:49:48Z

• PR #25984: (jmdcal) Support local files without md5sum | refs: #26101

• PR #26080: (techhat) Fix string checking in s3fs @ 2015-08-06T23:35:26Z

• PR #26079: (cachedout) Update docs to remove state.over @ 2015-08-06T23:35:26Z

• PR #26061: (gmcwhistler) Patch for issue #25994 @ 2015-08-06T17:07:34Z

• PR #26065: (s0undt3ch) [2015.5] Update to latest bootstrap stable release v2015.06.08 @ 2015-08-06T17:09:35Z

• PR #25994: (gmcwhistler) module.ilo tempfile creation in __execute_cmd results in TypeError: cannot concatenate `str' and `int' objects | refs: #26065

• PR #26064: (s0undt3ch) Don’t stacktrace when trying to get the default locale. @ 2015-08-06T16:11:05Z

• PR #26048: (jacobhammons) Updated windows download links in the docs to https://repo.saltstack.com @ 2015-08-05T22:59:50Z

• PR #26058: (opdude) Fix choco version on chocolatey versions below 0.9.9 @ 2015-08-06T18:50:10Z

• PR #26053: (terminalmage) fix syntax errors introduced in 0f776c13 @ 2015-08-06T17:07:34Z

• PR #26052: (epoelke) Bug fix to salt-key | refs: #26065

• PR #26051: (steverweber) cloud vmware driver does not provide mac_address unless vmware tools is running | refs: #26137 #26140

• PR #26050: (jmdcal) Trying to get md5 of local zip | refs: #25984

• PR #26049: (jmdcal) Support local files without md5sum | refs: #26101
• PR #26044: (rallytime) Make sure the key we’re comparing is also lowercase @ 2015-08-05T19:23:54Z
  - ISSUE #25616: (rallytime) [2015.5] Provisioning Linodes Stacktraces | refs: #26044
• PR #26042: (jfindlay) fix test mode logic in state docs @ 2015-08-05T19:23:07Z
• PR #26036: (nicholascapo) survey.hash: Remove manually printed text @ 2015-08-05T19:21:59Z
  - ISSUE #24460: (nicholascapo) Survey runner does not follow --out flag | refs: #26036
• PR #26030: (opdude) Fix a bug in choco version that returned odd data @ 2015-08-05T16:30:25Z
• PR #26032: (jfindlay) add test logic to state result doc @ 2015-08-05T16:28:32Z
• PR #26031: (alekti) Revert ``Add file as supported protocol for file source_hash. Fixes #23764'' @ 2015-08-05T15:32:01Z
  - ISSUE #23764: (es1o) source_hash from local file is not supported. | refs: #26031
• PR #26021: (anlutro) Documentation: Specify versionadded for git.present shared argument @ 2015-08-05T14:17:38Z
• PR #26020: (alekti) Correctly resolve conflict merging pull 25750 to 2015.5 @ 2015-08-05T14:16:58Z
  - ISSUE #22241: (masterkorp) Salt master not properly generating the map | refs: #26020
• PR #25992: (twangboy) Refactor win_system.py @ 2015-08-05T04:54:18Z
  - ISSUE #12255: (eliasp) `system.set_computer_desc' fails with non-ASCII chars | refs: #25992
  - ISSUE #3: (thatch45) libvirt module
• PR #26002: (twangboy) Fixed regex to account for comment character followed by whitespace @ 2015-08-04T22:28:11Z
  - ISSUE #25948: (twangboy) Fix uncomment function to handle spaces | refs: #26002
• PR #25970: (jfindlay) accept addition of layman overlay @ 2015-08-04T15:42:28Z
  - ISSUE #25949: (godlike64) layman.add does not work with unofficial overlays | refs: #25970
• PR #25971: (basepi) [2015.5] salt.modules.reg Add spaces for strings split across multiple lines @ 2015-08-04T15:39:48Z
• PR #25990: (rallytime) Back-port #25976 to 2015.5 @ 2015-08-04T14:36:53Z
  - PR #25976: (fleaflicker) Typo in help output | refs: #25990
• PR #25996: (attiasr) fix msiexec package remove @ 2015-08-04T14:36:31Z
• PR #25966: (rallytime) Back-port #25864 to 2015.5 @ 2015-08-03T18:48:26Z
  - ISSUE #25863: (peterdemin) pkg.installed fails on already installed package if it is in versionlock.list | refs: #25864
  - PR #25864: (peterdemin) #25863 state.pkg.installed fix | refs: #25966
• PR #25967: (rallytime) Back-port #25917 to 2015.5 @ 2015-08-03T18:48:02Z
  - PR #25917: (jmdcal) adding missing format string | refs: #25967
• PR #25895: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-08-03T17:12:37Z

37.2. Previous Releases
– ISSUE #23764: (es10) source_hash from local file is not supported. | refs: #25750
– PR #25750: (alekti) Add file as supported protocol for file source_hash. Fixes #25701. | refs: #26020
– PR #25704: (cachedout) Ensure prior alignment with master_type in 2014.7
– PR #25657: (MrCitron) Add the ability to specify a base pattern for carbon returner
– PR #25633: (AkhterAli) Update loader.py

• PR #25941: (jfindlay) add timelib to dependency versions @ 2015-08-03T12:23:42Z
  – ISSUE #25850: (ssgward) Need to add packages to --versions-report | refs: #25941

• PR #25942: (jfindlay) typo in minion doc @ 2015-07-31T23:05:05Z
  – ISSUE #25938: (nvx) winpkg highstate fails when a new package name contains a unicide character | refs: #25921

• PR #25938: (jacobhammons) Doc on using syndic with multimaster @ 2015-07-31T23:05:05Z
  – PR #14690: (jacksontj) Multi syndic

• PR #25938: (isbm) Bugfix: crash at getting non-existing repo | refs: #25894

• PR #25938: (jacksontj) Back-port #25982 to 2015.5 @ 2015-07-30T23:24:19Z
  – PR #25892: (TheBigBear) Update 7-zip msi un-installer instructions | refs: #25905

• PR #25927: (jacksontj) Pass actual renderers to the Reactor’s Compiler @ 2015-07-31T20:00:17Z
  – ISSUE #25884: (twangboy) Added allusers="1" when installing msi @ 2015-07-31T20:33:17Z
    – ISSUE #25839: (twangboy) ALLUSERS="1" should be a default when installing MSI's | refs: #25848

• PR #25898: (jfindlay) clarify and expand syndic docs @ 2015-07-31T20:01:23Z

• PR #25921: (cachedout) Handle non-ascii in state log @ 2015-07-31T17:41:30Z
  – ISSUE #25810: (nvx) winpkg highstate fails when a new package name contains a unicide character | refs: #25921

• PR #25919: (TheBigBear) Minor update to msi un-installer info @ 2015-07-31T17:39:48Z

• PR #25905: (rallytime) Back-port #25982 to 2015.5 @ 2015-07-30T23:24:19Z
  – PR #25892: (TheBigBear) Update 7-zip msi un-installer instructions | refs: #25905

• PR #25890: (rallytime) Back-port #25698 to 2015.5 @ 2015-07-30T23:12:09Z
  – ISSUE #25577: (yellow1912) Wrong indentation in document | refs: #25696
  – PR #25698: (rallytime) Back-port #25659 to 2015.8 | refs: #25890

• PR #25896: (AkhterAli) Update schedule.py
  – PR #25659: (isbm) Bugfix: crash at getting non-existing repo | refs: #25698

• PR #25894: (jacobhammons) Minor doc bug fixes @ 2015-07-30T23:02:34Z
  – ISSUE #25650: (jacksontj) state.running documentation is incorrect | refs: #25894
  – ISSUE #24042: (whiteinge) The state_events setting is not documented | refs: #25894
  – ISSUE #23788: (k5j) functions in drac.py module do not match documentation | refs: #25894
  – ISSUE #21296: (Lothiraldan) Possible minion enumeration using saltutil.find_job and eauth | refs: #25894

• PR #25877: (rallytime) Protect against passing a map file in addition to VM names with --destroy @ 2015-07-30T21:55:45Z
  – ISSUE #24036: (arthurlogilab) [salt-cloud] Protect against passing command line arguments as names for the --destroy command in map files | refs: #25877
• PR #25870: (rallytime) Back-port #25824 to 2015.5 @ 2015-07-30T21:54:35Z
  • PR #25824: (klyr) Fix get_managed() in file.py module for local files | refs: #25870
• PR #25885: (t0rrant) Update Debian changelog @ 2015-07-30T20:05:59Z
• PR #25885: (rallytime) Back-port #25862 to 2015.5 @ 2015-07-30T17:34:02Z
  • PR #25862: (zyio) Adding SCP_NOT_FOUND exit code | refs: #25875
• PR #25873: (rallytime) Back-port #25855 to 2015.5 @ 2015-07-30T17:33:55Z
• PR #25871: (rallytime) Back-port #25829 to 2015.5 @ 2015-07-30T17:33:43Z
  • PR #25829: (puneetk) Patch 3 | refs: #25873
• PR #25873: (rallytime) Back-port #25829 to 2015.5 @ 2015-07-30T17:33:43Z
  • PR #25829: (puneetk) Fixed typo in salt.states.saltmod.function doc string | refs: #25871
• PR #25853: (davidjb) Make ssh-id-wrapper accessible to non-root users @ 2015-07-30T16:49:47Z
  • PR #25853: (stolendog) salt-ssh running git clone with not root user | refs: #25856
• PR #25856: (jfindlay) expand minion reauth scalability documentation @ 2015-07-30T15:33:17Z
  • PR #25856: (jfindlay) rework deprecation documentation for release names @ 2015-07-30T15:33:33Z
  • PR #25856: (jfindlay) fix autoruns list @ 2015-07-29T15:29:20Z
  • PR #25826: (anlutro) Check that `onchanges` is a list @ 2015-07-29T15:00:28Z
• PR #25798: (twangboy) Fixed stacktrace on package name not found @ 2015-07-28T22:40:14Z
  • PR #25798: (nickw8) windows minion repo not updating | refs: #25798
• PR #25797: (twangboy) Changed repocache back to cached_repo @ 2015-07-28T22:39:32Z
  • PR #25797: (lorensgordon) Stacktrace on Windows when running pkg.list_pkgs | refs: #25598 #25763
- PR #25763: (twangboy) Fix 25437 | refs: #25797
- PR #25793: (rallytime) Back-port #25730 to 2015.5 @ 2015-07-28T19:37:34Z
  - PR #25730: (sjorge) patchelf lives in pkgsrc | refs: #25793
- PR #25792: (rallytime) Back-port #25688 to 2015.5 @ 2015-07-28T19:37:17Z
  - PR #25688: (bclermont) Don't acquire lock if there is no formatter | refs: #25792
- PR #25796: (cachedout) Remove debug from docs @ 2015-07-28T17:35:59Z
- PR #25749: (jahamn) Allow zpool.create on character devices @ 2015-07-28T16:01:40Z
- PR #25752: (thatch45) State top saltenv @ 2015-07-28T01:02:10Z
- PR #25755: (twangboy) Fixed problem with dunder functions not being passed @ 2015-07-28T19:31:22Z
- PR #25738: (rallytime) Back-port #25699 to 2015.5 | refs: #25709
  - PR #25699: (colekowalski) add glusterfs' direct-io-mode to mount_invisible_keys | refs: #25709 #25792
- PR #25733: (rallytime) Back-port #25671 to 2015.5 @ 2015-07-27T16:08:23Z
  - PR #25671: (niq000) added a parameter so verifying SSL is now optional instead of hard-coded | refs: #25738
- PR #25737: (rallytime) Back-port #25608 to 2015.5 @ 2015-07-27T16:08:18Z
  - ISSUE #25229: (rall0r) Module git.latest kills target directory when test=True | refs: #25608
  - PR #25608: (rall0r) Fix: prevent git.latest from removing target | refs: #25737
- PR #25705: (blackduckx) Support for setm augeas command. @ 2015-07-27T16:07:10Z
  - ISSUE #22460: (onmeac) Command setm is not supported (yet) | refs: #25705

2462 Chapter 37. Release notes
• PR #25703: (cachedout) Return to str for master_type for 2015.5 @ 2015-07-27T16:06:22Z

• PR #25702: (twangboy) Fixed win_user module for groups with spaces in the name @ 2015-07-27T15:06:33Z
  - ISSUE #25351: (m03) win_servermanager.list_installed failing with `''IndexError: list index out of range''`
    | refs: #25711

• PR #25711: (twangboy) Fixed problem with win_servermanager.list_installed @ 2015-07-27T15:05:48Z
  - ISSUE #25144: (johnccfm) user.present on Windows fails to add user to groups if group name contains a space | refs: #25702

• PR #25714: (cachedout) Display warning when progressbar can't be loaded @ 2015-07-25T00:10:13Z
  - ISSUE #25435: (yee379) progressbar dependency missing | refs: #25714

• PR #25699: (rallytime) Back-port #25660 to 2015.5 | refs: #25709 @ 2015-07-24T22:11:40Z
  - PR #25660: (colekowalski) add glusterfs' direct-io-mode to mount_invisible_keys | refs: #25699 #25709

• PR #25694: (s0undt3ch) Salt-SSH fix for #25689 @ 2015-07-24T21:41:57Z
  - ISSUE #25689: (anlutro) Minion log in salt-ssh | refs: #25694

• PR #25677: (aneeshusa) Fix pacman.list_upgrades when refresh=True. @ 2015-07-24T16:33:18Z
  - ISSUE #25674: (UtahDave) file.managed with contents parameter uses wrong line endings on Windows | refs: #25675

• PR #25666: (nmadhok) Check if the properties exist before looping over them causing KeyError @ 2015-07-23T17:55:40Z
  - ISSUE #25665: (nmadhok) salt-cloud VMware driver fails with KeyErrors if there's any existing machine in the VMware infrastructure in (invalid state) | refs: #25666

• PR #25656: (anlutro) Fix locale detection in debian/gentoo @ 2015-07-23T16:46:40Z

• PR #25656: (anlutro) Fix locale detection in debian/gentoo @ 2015-07-23T20:29:37Z

• PR #25666: (nmadhok) Check if the properties exist before looping over them causing KeyError @ 2015-07-23T17:55:40Z
  - ISSUE #25665: (nmadhok) salt-cloud VMware driver fails with KeyErrors if there's any existing machine in the VMware infrastructure in (invalid state) | refs: #25666

• PR #25656: (anlutro) Fix locale detection in debian/gentoo @ 2015-07-23T16:46:40Z

• PR #25661: (rallytime) Back-port #25624 to 2015.5 @ 2015-07-23T16:26:48Z
  - PR #25624: (bobrik) Fix typo in get_routes example for debian_ip | refs: #25661

• PR #25662: (rallytime) Back-port #25638 to 2015.5 @ 2015-07-23T16:26:40Z
  - ISSUE #15209: (hubez) file.manage: source_hash not working with s3:// (2014.7.0rc1) | refs: #25638
  - PR #25638: (TronPaul) fix bad merge in 99fc7ec | refs: #25662

• PR #25644: (cachedout) pillar doc fix @ 2015-07-22T22:57:23Z
- ISSUE #25413: (zizkebab) pillar_opts default behavior is not reflected in the docs | refs: #25644

- PR #25642: (cachedout) Warn on pillar schedule delete @ 2015-07-22T22:04:12Z
  - ISSUE #25540: (dennisjac) salt highstate schedule cannot be removed | refs: #25642

- PR #25598: (twangboy) Fixed problem trying to load file with name of boolean type @ 2015-07-22T17:07:49Z
  - ISSUE #25437: (loregordon) Stacktrace on Windows when running pkg.list_pkgs | refs: #25598 #25763
  - 7b79e433 Merge pull request #25598 from twangboy/fix_25437

- PR #25604: (terminalmage) Move patching of mock_open to within test @ 2015-07-22T22:04:12Z
  - ISSUE #25603: (terminalmage) Add version_cmp function to yumpkg.py @ 2015-07-22T15:42:29Z

- PR #25590: (garethgreenaway) 2015.5 scheduled jobs return data @ 2015-07-21T21:15:06Z

- PR #25560: (dennisjac) scheduled highstate runs don't return results to the job cache | refs: #25590

- PR #25584: (rallytime) Back-port #24054 and #25576 to 2015.5 @ 2015-07-21T21:16:38Z

- PR #25603: (terminalmage) Add version_cmp function to yumpkg.py @ 2015-07-22T15:42:29Z

- PR #25609: (soudtisch) [2015.5] Update the bootstrap script to latest release v2015.07.22 @ 2015-07-22T17:07:49Z

- PR #25568: (twangboy) Fixed win_useradd module to add fullname @ 2015-07-21T14:30:25Z

- PR #25521: (cachedout) Fix outputer for state.orch @ 2015-07-20T19:30:14Z

- PR #25563: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-07-20T19:27:36Z
  - PR #25416: (cachedout) Fix broken keyword

- PR #25559: (cachedout) Lint win_pkg @ 2015-07-20T17:46:29Z
- **PR #25556**: (attiasr) fix for #25532 @ 2015-07-20T17:45:11Z
  - ISSUE #25532: (attiasr) salt/modules/win_pkg.py list_pkgs is broken (encoding issues) | refs: #25556 #25580
- **PR #25554**: (jfindlay) verify_ssl=True for s3 ext pillar @ 2015-07-20T17:43:38Z
  - ISSUE #25538: (stanislavb) S3 ext_pillar configuration requires verify_ssl | refs: #25556 #25580
- **PR #25551**: (rallytime) Backport #25530 to 2015.5 @ 2015-07-20T17:43:00Z
  - PR #25530: (andre-luiz-dos-santos) The variable name must be last | refs: #25551
- **PR #25533**: (attiasr) port 445 for windows bootstrapping @ 2015-07-20T15:13:06Z
- **PR #25525**: (gtmanfred) add make _prepare an alias for postinitio @ 2015-07-20T15:12:38Z
  - ISSUE #25432: (gtmanfred) [2015.5.3][raet] raet error with SaltRaetRoadStackJoiner | refs: #25525
- **PR #25528**: (davidjb) Fix typo in extend declaration doco @ 2015-07-18T14:22:06Z
- **PR #25527**: (davidjb) Fix minor typo in best practice example | refs: #25531
- **PR #25520**: (Chencale) make _prepare an alias for postinitio @ 2015-07-18T19:16:10Z
- **PR #25517**: (garethgreenaway) fixes to schedule.add documentation in 2015.5 @ 2015-07-17T21:49:26Z
  - ISSUE #25493: (whiteinge) Highstate outpuuter not used for state.apply | refs: #25517
  - PR #25485: (attiasr) fix file downloads on windows
- **PR #25516**: (rallytime) Backport vmware driver to 2015.5 branch @ 2015-07-20T15:11:26Z
  - ISSUE #25511: (rallytime) Make provider --> driver change backward compatible | refs: #25519 #25519
- **PR #25510**: (Oro) Fix hipchat.send_message when using API v2 @ 2015-07-20T15:09:13Z
- **PR #25506**: (s0und3ch) [2015.5] Update bootstrap script to latest stable release, v2015.07.17 @ 2015-07-17T15:40:38Z
  - ISSUE #598: (whiteinge) Command common troubleshooting tips | refs: #25506

### 37.2. Previous Releases

2465
- PR #621: (akoumjian) Adding ec2 cloud-init bootstrap docs | refs: #25506
- PR #606: (terminalmage) need empty line before code blocks. added ones that were missing. | refs: #25506
- PR #602: (terminalmage) State-related documentation changes | refs: #25506
- PR #25498: (jfindlay) only read /proc/1/cmdline if it exists @ 2015-07-17T15:35:33Z
- ISSUE #25454: (mschiff) Regression: salt 2015.5 not working in secure chroot anymore. | refs: #25498
- PR #25487: (rallytime) Back-port #25464 to 2015.5 @ 2015-07-16T15:58:36Z
- PR #25464: (iquast) docfix: `cache_jobs: False" => grains_cache: False” | refs: #25487
- PR #25482: (oeufete) Fix docker.running detection of running container @ 2015-07-16T15:58:29Z
- PR #2015: (thekuffs) Esky / bbfreeze support
- PR #25468: (joejulian) Add support for pyOpenSSL > 0.10 @ 2015-07-16T15:10:30Z
- ISSUE #25384: (rickh563) pyopenssl 0.14 requirement in 2015.5.3 does not work in RHEL6 : ZD-364 | refs: #25468
- PR #25467: (rallytime) Add lxml dependency to opennebula docs @ 2015-07-16T15:09:57Z
- PR #25461: (jahamn) Update file, if force option and content not same @ 2015-07-16T15:09:57Z
- ISSUE #25250: (wipfs) `force' option in copy state deletes target file | refs: #25461 #25710
- ISSUE #24647: (nmadhok) salt.states.file.copy does not copy the file if it already exists with force=True | refs: #25461
- PR #25438: (rallytime) Reduce digital_ocean_v2 API call frequency @ 2015-07-16T19:40:18Z
- ISSUE #25431: (namcois) Digital Ocean v2 reducing API calls by adding per_page | refs: #25438
- PR #25457: (jacksontj) Saltnado @ 2015-07-15T17:50:12Z
- PR #25427: (tony-cocco) Saltnado runner client results in blocking call despite being set-up as Runner.async | refs: #25457
- PR #25459: (jahamn) Fixed `defualts' typo in verify.py @ 2015-07-15T16:53:06Z
- PR #25426: (iquast) bugfix: trailing "...done" in rabbitmq output (backport from `develop' to 2015.5) @ 2015-07-15T14:48:05Z
- PR #25433: (jleroy) Support for IPv6 addresses scopes in network.interfaces (ifconfig) @ 2015-07-15T14:44:09Z
- PR #25151: (jleroy) Support for IPv6 addresses scopes in network.interfaces | refs: #25274 #25433
- PR #25430: (twangboy) Disabled rbenv execution module for Windows @ 2015-07-15T14:41:18Z
- ISSUE #21041: (deuscapturus) state module gem.installed not working on Windows. | refs: #25430 #25561 #25428
- ISSUE #1846: (seanchannel) development dependencies
- PR #25420: (techhat) Move S3 to use AWS Signature Version 4 @ 2015-07-14T22:03:09Z
- PR #25418: (twangboy) Fixed problem with file.managed test=True @ 2015-07-14T21:26:59Z
- ISSUE #20441: (deuscapturus) State module file.managed returns an error on Windows and test=Test | refs: #25418
- PR #25417: (ahusl) extended documentation about dependencies for dig module @ 2015-07-14T20:49:51Z
- PR #25411: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-07-14T17:55:26Z
- PR #25375: (cachedout) Fix error in config.py for master_type
- PR #25324: (jacobhammons) Latest help theme updates
- PR #25406: (anlutro) Force arguments to aptpkg.version_cmp into strings @ 2015-07-14T16:15:41Z
- PR #25408: (rallytime) Back-port #25399 to 2015.5 @ 2015-07-14T16:09:06Z
  - PR #25399: (jarpy) Demonstrate per-minion client_acl. | refs: #25408
- PR #25406: (jacobhammons) Latest help theme updates
- PR #25406: (cachedout) Fix error in config.py for master_type
- PR #25395: (rallytime) Back-port #25389 to 2015.5 @ 2015-07-14T03:26:34Z
  - PR #25389: (l2ol33rt) Adding entropy note for gpg renderer | refs: #25395
- PR #25392: (rallytime) Back-port #25399 to 2015.5 @ 2015-07-14T03:25:13Z
  - PR #25256: (yanatan16) Don't assume source_hash exists | refs: #25392
- PR #25396: (cachedout) Lint #25383 @ 2015-07-13T21:01:10Z
- ISSUE #24444: (michaelkrupp) file.managed does not handle dead symlinks | refs: #25383
- PR #25397: (GideonRed) Introduce standard error output when cli exits with non-zero status @ 2015-07-14T20:58:23Z
- PR #25369: (anlutro) Fix aptpkg.version_cmp @ 2015-07-13T20:18:45Z
- PR #25379: (jfindlay) Fix manage_file function in salt/modules/file.py to handle broken sym... @ 2015-07-13T21:01:10Z
  - ISSUE #24444: (michaelkrupp) file.managed does not handle dead symlinks | refs: #25383
- PR #25386: (cachedout) Lint #25383 @ 2015-07-13T21:01:10Z
  - ISSUE #24444: (michaelkrupp) file.managed does not handle dead symlinks | refs: #25383
- PR #25379: (jfindlay) Fix manage_file function in salt/modules/file.py to handle broken sym... @ 2015-07-13T19:50:27Z
  - ISSUE #24444: (michaelkrupp) file.managed does not handle dead symlinks | refs: #25383
- PR #25369: (anlutro) Fix aptpkg.version_cmp @ 2015-07-13T20:18:45Z
- PR #25379: (jfindlay) Fix manage_file function in salt/modules/file.py to handle broken sym... @ 2015-07-13T20:24Z
- ISSUE #25383: (jahamn) Fix manage_file function in salt/modules/file.py to handle broken sym... @ 2015-07-13T20:24Z
  - ISSUE #25383: (jahamn) Fix manage_file function in salt/modules/file.py to handle broken sym... @ 2015-07-13T20:24Z
- PR #25369: (anlutro) Fix aptpkg.version_cmp @ 2015-07-13T20:18:45Z
- PR #25339: (davidjb) Fix documentation for file.blockreplace @ 2015-07-13T03:41:20Z
- PR #25326: (rallytime) Back-port #20972 to 2015.5 @ 2015-07-10T18:49:44Z
  - ISSUE #19288: (oba11) AssociatePublicIpAddress doesn't work with salt-cloud 2014.7.0 | refs: #20972 #25326
  - PR #20972: (JohannesEbke) Fix interface cleanup when using AssociatePublicIpAddress in #19288 | refs: #25326
- PR #25336: (dkiser) Deep merge of pillar lists | refs: #26016 @ 2015-07-13T15:51:01Z
  - ISSUE #22241: (masterkorp) Salt master not properly generating the map | refs: #25358
- PR #25346: (bechtoldt) set correct indentation in states/requisites.rst (docs), fixes #25281 @ 2015-07-13T15:34:45Z
  - ISSUE #25281: (shinshenj) Unless usage in Official Doc syntax error?
- PR #25336: (terminalmage) Don't try to read init binary if it wasn't found @ 2015-07-13T09:45:30Z
- PR #25350: (davidjb) Fix documentation for file.blockreplace @ 2015-07-13T03:41:20Z
- PR #25326: (rallytime) Back-port #20972 to 2015.5 @ 2015-07-10T18:49:44Z
- PR #25327: (rallytime) Back-port #25290 to 2015.5 @ 2015-07-10T18:49:37Z

37.2. Previous Releases
- ISSUE #24433: (chrими) Salt locale state fails, if locale has not been generated | refs: #25290
- PR #25290: (pcdummy) Simple fix for locale.present on Ubuntu. | refs: #25327
- PR #25328: (cherrytime) Back-port #25309 to 2015.5 @ 2015-07-10T17:22:59Z
- ISSUE #24827: (yermulnik) locale.present doesn't generate locales | refs: #25309
- PR #25309: (davidjib) Format /etc/locale.gen correctly in salt.modules.localemod.gen_locale | refs: #25328
- PR #25322: (jacobhammons) version change to 2015.5.3 @ 2015-07-10T17:22:59Z
- ISSUE #24827: (yermulnik) locale.present doesn't generate locales | refs: #25309
- PR #25309: (davidjib) Format /etc/locale.gen correctly in salt.modules.localemod.gen_locale | refs: #25328
- PR #25261: (jfindlay) Extract tomcat war version @ 2015-07-10T17:22:59Z
- ISSUE #24520: (nvx) Tomcat module fails to extract version number from snapshot builds (2015.5 regression) | refs: #24927
- PR #24927: (egarbi) Tomcat module fails to extract version number from snapshot builds | refs: #25269
- PR #25238: (DmitryKuzmenko) Pillarenv backport 2015.5 @ 2015-07-10T17:22:59Z
- ISSUE #18808: (amendlik) Add command line argument to select pillar environment | refs: #25238
- PR #23719: (DmitryKuzmenko) Support pillarenv cmdline in state.sls
- PR #25299: (twangboy) Added -NonInteractive so powershell doesn't hang waiting for input @ 2015-07-09T13:36:26Z
- ISSUE #13943: (Supermathie) Powershell commands that expect input hang forever | refs: #25299
- PR #25301: (jacobhammons) bug fix for module function display in help @ 2015-07-09T20:06Z
- PR #25279: (jacobhammons) Additional docs on external and master job cache, assorted doc fixes @ 2015-07-09T16:22:59Z
- ISSUE #25277: (jacobhammons) CherryPy recommended versions | refs: #25279
- PR #25274: (jleroy) Fix for issue #25268 @ 2015-07-09T13:36:26Z
- ISSUE #25268: (lichtamberg) Salt not working anymore in 2015.8/develop: ValueError: `scope' is not in list | refs: #25274
- PR #25151: (jleroy) Support for IPv6 addresses scopes in network.interfaces | refs: #25274 #25433
- PR #25272: (twangboy) Fixed problem with service not starting @ 2015-07-08T23:29:48Z
- PR #25225: (nmadhok) Backporting fix for issue #25223 on 2015.5 branch @ 2015-07-08T15:16:18Z
- ISSUE #25223: (nmadhok) Runner occasionally fails with a RuntimeError when fired by a reactor | refs: #25225
- PR #25214: (cherrytime) A couple of doc fixes for the http tutorial @ 2015-07-07T22:23:07Z
- PR #25194: (cherrytime) Update moto version check in boto_vpc_test and update min version @ 2015-07-07T18:27:32Z
- ISSUE #24272: (cherrytime) Fix boto_vpc_test moto version check | refs: #25194
- PR #25205: (basepi) Update releasecandidate docs @ 2015-07-07T15:25:24Z
- PR #25187: (UtahDave) Doc fixes: Fix misspelling and remove extraneous double spaces @ 2015-07-07T01:07:04Z
- PR #25182: (cachedout) Try to re-pack long floats as strs @ 2015-07-07T01:06:43Z
• PR #25185: (rallytime) Back-port #25128 to 2015.5 @ 2015-07-07T00:58:00Z
  - ISSUE #23822: (sidcarter) Zip file extracted permissions are incorrect | refs: #25128
  - PR #25128: (stanislavb) Use cmd_unzip to preserve permissions | refs: #25185
• PR #25181: (rallytime) Back-port #25102 to 2015.5 @ 2015-07-07T00:57:13Z
  - PR #25102: (derBroBro) Update win_network.py | refs: #25181
• PR #25179: (rallytime) Back-port #25059 to 2015.5 @ 2015-07-07T00:56:44Z
  - ISSUE #24301: (iggy) influxdb_user and influxdb_database states need virtual functions | refs: #25059
  - PR #25059: (babilen) Add virtual functions to influxdb state modules | refs: #25179
• PR #25196: (twangboy) Fixed #18919 false-positive on pkg.refresh @ 2015-07-07T00:24:13Z
  - ISSUE #18919: (giner) Windows: pkg.refresh_db returns false-positive success | refs: #25196
• PR #25180: (rallytime) Back-port #25088 to 2015.5 @ 2015-07-06T20:33:45Z
  - PR #25088: (supertom) Update | refs: #25180
• PR #25191: (basepi) Add extrndest back to fileclient.is_cached in 2015.5 @ 2015-07-06T19:35:24Z
  - PR #25117: (martinhoefling) Fix for issue #25016 | refs: #25191
• PR #25175: (rallytime) Back-port #25019 @ 2015-07-06T18:52:59Z
  - ISSUE #21879: (bechtoldt) Reference pages in documentation are outdated again | refs: #25019
  - ISSUE #19262: (bechtoldt) salt.pillar.file_tree doesn't appear in the documentation | refs: #25019
  - PR #25019: (bechtoldt) add missing module documentation to references | refs: #25173
  - PR #24421: (bechtoldt) add missing module documentation | refs: #25019
  - PR #21880: (bechtoldt) update references, fixes #21879 | refs: #25019
  - PR #20039: (bechtoldt) completing some doc references | refs: #25019
• PR #25171: (rallytime) Back-port #25001 to 2015.5 @ 2015-07-06T18:51:53Z
  - PR #25001: (jasonkeene) Add docs for key arg in ssh_known_hosts.present | refs: #25171
• PR #25170: (rallytime) Back-port #24982 to 2015.5 @ 2015-07-06T16:34:43Z
  - PR #24982: (asyncore) ec2 network_interfaces fix | refs: #25170
• PR #25161: (aneeshusa) Allow checking for non-normalized systemd units. @ 2015-07-06T15:15:31Z
• PR #25151: (jleroy) Support for IPv6 addresses scopes in network.interfaces | refs: #25274 #25433 @ 2015-07-06T14:43:03Z
• PR #25166: (cachedout) Lint #25149 @ 2015-07-06T14:40:29Z
  - ISSUE #24979: (mavenAtHouzz) [Discussion] Support for more than 1 netapi.rest_tornado server process | refs: #25149
  - PR #25149: (jacksontj) Saltndo multiprocess support | refs: #25166
• PR #25149: (jacksontj) Saltndo multiprocess support | refs: #25166 @ 2015-07-06T14:38:43Z
• ISSUE #24979: (mavenAtHouzz) [Discussion] Support for more than 1 netapi.rest_tornado server process | refs: #25149

• PR #25120: (d--j) add missing continue for exception case @ 2015-07-02T19:38:45Z

• PR #25117: (basepi) File client is_cached | refs: #25191 @ 2015-07-02T19:38:26Z

• PR #25087: (0xf10e) Fix execution module for glance - now based on 2015.5! @ 2015-07-02T19:36:27Z

• PR #25129: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5 @ 2015-07-02T17:37:40Z

• ISSUE #18447: (ryan-lane) Can’t install salt with raet using pip -e git

• PR #25093: (jaybocc2) quick fix for issue #18447

• PR #25069: (puneetk) Add a helper module function called list_enabled

• PR #25114: (jfindlay) Revert ‘“Revert ‘“adding states/postgres_database unit test case.””’ @ 2015-07-02T01:01:29Z

• PR #24798: (jtand) Revert ‘“adding states/postgres_database unit test case.”’ | refs: #25114

37.2.21 Salt 2015.5.6 Release Notes

Version 2015.5.6 is a bugfix release for 2015.5.0.

Security Fixes

CVE-2015-6941 - win_useradd module and salt-cloud display passwords in debug log

Updated the win_useradd module return data to no longer include the password of the newly created user. The password is now replaced with the string XXX-REDACTED-XXX. Updated the Salt Cloud debug output to no longer display win_password and sudo_password authentication credentials.

CVE-2015-6918 - Git modules leaking HTTPS auth credentials to debug log

Updated the Git state and execution modules to no longer display HTTPS basic authentication credentials in loglevel debug output on the Salt master. These credentials are now replaced with REDACTED in the debug output. Thanks to Andreas Stieger <asteiger@suse.com> for bringing this to our attention.
Changes for v2015.5.5..v2015.5.6

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Total Merges: 144

Changes:

- PR #27557: (jfindlay) add doc motivating mine vs grains
- PR #27515: (jfindlay) save iptables rules on SuSE
- PR #27509: (jfindlay) tell the user why the gluster module does not work
- PR #27379: (jfindlay) document and check dict type for pip env_vars
- PR #27516: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5
- PR #27472: (cachedout) Change recommended schema for data field in mysql event table
- PR #27468: (cachedout) Fix 27351
- PR #27479: (aboe76) fix locale on opensuse and suse `#27438`
- PR #27483: (rallytime) Outputters should sync to output, not outPutters, on the minion.
- PR #27484: (rallytime) Back-port #27434 and #27470 to 2015.5
- PR #27469: (twangboy) Added quotes to version numbers example
- PR #27467: (cachedout) file.managed: check contents_{pillar|grain} result
- PR #27419: (rallytime) Amend error log to include multiple tips for troubleshooting.
- PR #27426: (rallytime) Don't stacktrace if there are conflicting id errors in highstate
- PR #27408: (rallytime) Fix avail_locations function for the softlayer_hw driver in 2015.5
- PR #27410: (jacobhammons) Fix css layout Refs `#27389`
- PR #27336: (rallytime) [2015.5] Fixup salt-cloud logging
- PR #27358: (lorengordon) Escape search replacement text, fixes `#27356`
- PR #27345: (rallytime) Allow use of rst header links by separating options out from yaml example
- PR #26903: (bersace) Review defaults.get
- PR #27317: (efficks) State unzip should use unzip command instead of unzip_cmd.
- PR #27309: (rallytime) Change a value list to a comma-separated string in boto_route53.present
- PR #27311: (jfindlay) discuss replacement occurrences in file doc
- PR #27310: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5
- PR #27308: (terminalmage) Fix refresh_db regression in yumpkg.py
- PR #27286: (terminalmage) Add a configurable timer for minion return retries
- PR #27278: (rallytime) Back-port #27256 to 2015.5
- PR #27277: (rallytime) Back-port #27230 to 2015.5
- PR #27253: (jfindlay) 2015.5 -> 2015.5.0
- PR #27244: (garethgreenaway) Exception in cloud.ec2.create_snapshot
- PR #27231: (jfindlay) only write cron file if it is changed
• PR #27233: (basepi) [2015.5] Add stub release notes for 2015.5.6
• PR #27208: (basepi) [2015.5] Add test.nop state
• PR #27201: (jfindlay) rename hash_hostname to hash_known_hosts
• PR #27214: (jacksontj) Correctly support https, port 443 is not a requirement
• PR #27172: (rallytime) Back-port #27150 to 2015.5
• PR #27194: (rallytime) Back-port #27180 to 2015.5
• PR #27176: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5
• PR #27194: (rallytime) Back-port #27180 to 2015.5
• PR #27170: (rallytime) Update Getting Started with GCE docs to use cloud.profiles or cloud.profiles.d examples
• PR #27167: (rallytime) Back-port #27148 to 2015.5
• PR #27168: (techhat) Add further gating of impacket library
• PR #27166: (rallytime) Allow a full-query for EC2, even if there are no profiles defined
• PR #27162: (rallytime) Be explicit in using ``SoftLayer" for service queries in SoftLayer drivers
• PR #27149: (twangboy) Fixed problem with add/remove path
• PR #27147: (rallytime) Enforce bounds in the GCE Regex
• PR #27128: (eguven) don’t show diff for test run if show_diff=False
• PR #27116: (jacobhammons) Update latest to 2015.8, 2015.5 is now previous
• PR #27033: (jfindlay) Merge #27019
• PR #26942: (Arabus) Fix docker.run
• PR #26977: (abh) Add support for PEERNTTP network interface configuration
• PR #27023: (jfindlay) add test support for htpasswd state mod
• PR #27074: (twangboy) Replaced password with redacted when displayed
• PR #27073: (rallytime) Remove `\use develop branch` warning from LXC tutorial
• PR #27054: (rallytime) Back-port #27029 to 2015.5
• PR #27053: (rallytime) Back-port #26992 to 2015.5
• PR #27052: (rallytime) Back-port #26930 to 2015.5
• PR #27049: (johanek) Run repoquery less
• PR #27070: (stanislavb) Deprecate salt.utils.iam in Carbon
• PR #27030: (jfindlay) Backport #26938
• PR #27025: (cachedout) Better try and error handling for prep_jid
• PR #27035: (terminalmage) useradd.py: Use contextmanager to prevent leaked filehandles
• PR #27034: (rallytime) Update softlayer docs for where to find apikey
• PR #27024: (rallytime) Back-port #27004 to 2015.5
• PR #27027: (rallytime) Back-port #27013 to 2015.5
• PR #27026: (rallytime) Back-port #27011 to 2015.5
• PR #26972: (twangboy) Catch the 404 error from fileclient
• PR #26951: (terminalmage) Fix timezone module for CentOS
- PR #26875: (marccardinal) LXC gateway provisioned only when IP is provided
- PR #26997: (twangboy) Fixed symlinks for windows (don’t use user root)
- PR #27001: (twangboy) Added CLI Example for reg.delete_key_recursive
- PR #26996: (jacobhammons) Beacon doc updates
- PR #26868: (joejulian) Use the actual device name when checking vgdisplay
- PR #26955: (dsusmky) S3 ext_pillar module has broken caching mechanism (backport to 2015.5)
- PR #26987: (rallytime) Back-port #26966 to 2015.5
- PR #26915: (rallytime) Update Joyent Cloud Tests
- PR #26971: (rallytime) Fix a couple of typos in reactor docs
- PR #26976: (thatch45) Revert "file.symlink gets windows account instead of root"
- PR #26975: (whiteinge) Remove mocks from rest_cherrypy integration tests; fix groups check bug
- PR #26899: (twangboy) file.symlink gets windows account instead of root
- PR #26690: (rallytime) Fix bash code block formatting in CherryPy netapi docs
- PR #26940: (rallytime) Fix minor doc typo in client api
- PR #26871: (rallytime) Back-port #26852 to 2015.5
- PR #26851: (jacobhammons) states/pkgrep examples, suse installation updates
- PR #26817: (jfindlay) modify groupadd for rhel 5
- PR #26824: (pravka) [salt-cloud] Fix creating droplet from snapshot in digital_ocean provider
- PR #26823: (joejulian) use dbus instead of localectl
- PR #26820: (jfindlay) add default param in _parse_localectl in locale mod
- PR #26821: (twangboy) Fixed user.rename function in windows
- PR #26803: (twangboy) Added check for PyMySQL if MySQLdb import fails
- PR #26815: (jfindlay) stringify linode id before performing str actions
- PR #26800: (jacobhammons) Doc bug fixes
- PR #26793: (rallytime) Don’t stacktrace if ˝name˝ is specified as a minion id in a map file
- PR #26790: (rallytime) Update Saltify docs to be more accurate and helpful
- PR #26787: (jfindlay) merge #26775
- PR #26759: (terminalmage) Backport PR #26726 to 2015.5 branch
- PR #26768: (garethgreenaway) Fixes to ipset in 2015.5 for ˝#26628˝
- PR #26753: (jfindlay) import elementree from _compat in ilo exec mod
- PR #26736: (twangboy) Changed import from smbconnection to smb3
- PR #26714: (jfindlay) add exception placeholder for older msgpacks
- PR #26710: (rallytime) Update GCE driver to return True, False or a new name in __virtual__()
- PR #26709: (rallytime) Ensure VM name is valid before trying to create Linode VM
- PR #26617: (terminalmage) Fix Windows failures in pip module due to raw string formatting
- PR #26700: (kev009) Ignore the first element of kern.disks split, which is the sysctl name
• PR #26695: *(terminalmage)* Better HTTPS basic auth redaction for 2015.5 branch
• PR #26694: *(terminalmage)* Backport #26693 to 2015.5
• PR #26681: *(basepi)* [2015.5] Merge forward from 2014.7 to 2015.5
• PR #26676: *(rallytime)* Back-port #26648 to 2015.5
• PR #26677: *(rallytime)* Back-port #26653 to 2015.5
• PR #26675: *(rallytime)* Back-port #26631 to 2015.5
• PR #26655: *(cheng0919)* Update win_dns_client.py
• PR #26662: *(jacobhammons)* update version to 2015.5
• PR #26651: *(jfindlay)* add 2015.5.4 notes to 2015.5.5 notes
• PR #26525: *(jfindlay)* document check_file_meta args, remove unused arg
• PR #26561: *(stanislavb)* Leave salt.utils.s3 location fallback to salt.utils.aws
• PR #26573: *(rallytime)* Don’t stacktrace if using private_ips and delete_sshkeys together
• PR #26563: *(rallytime)* Fix error detection when salt-cloud config is missing a master’s address
• PR #26641: *(basepi)* [2015.5] Merge forward from 2014.7 to 2015.5
• PR #26620: *(rallytime)* Also add `-Z` to script args for cloud tests
• PR #26618: *(rallytime)* Add script_args: `-P` to Ubuntu 14 profiles for nightly cloud tests
• PR #26612: *(rallytime)* Use an available image to test against
• PR #26576: *(rallytime)* Ensure GCE and EC2 configuration checks are correct
• PR #26580: *(rallytime)* Avoid race condition when assigning floating IPs to new VMs
• PR #26581: *(terminalmage)* Skip tests that don’t work with older mock
• PR #26591: *(rallytime)* Back-port #26554 to 2015.5
• PR #26565: *(cachedout)* Fix many errors with `__virtual__` in tests
• PR #26553: *(rallytime)* Back-port #26548 to 2015.5
• PR #26552: *(rallytime)* Back-port #26542 to 2015.5
• PR #26551: *(rallytime)* Back-port #26539 to 2015.5
• PR #26549: *(rallytime)* Back-port #26524 to 2015.5
• PR #26527: *(jfindlay)* check exists and values in boto_elb listeners
• PR #26446: *(stanislavb)* Fetch AWS region from EC2 instance metadata
• PR #26546: *(nmadhok)* Do not raise KeyError when calling avail_images if VM/template is in disconnected state
• PR #26537: *(jfindlay)* Merge #26481
• PR #26528: *(zmalone)* Fixing encrypt to instructions in the 2015.5 branch
37.2.22 Salt 2015.5.7 Release Notes

Note: A significant orchestrate issue #29110 was discovered during the release process of 2015.5.7, so it has not been officially released. Please use 2015.5.8 instead.

- PR #28669: (rallytime) Use the -q argument to strip extraneous messages from rabbitmq
- PR #28645: (jacksoni) Rework minion return_retry_timer
- PR #28668: (twangboy) Fixed join_domain and unjoin_domain for Windows
- PR #28666: (jfindlay) define r_data before using it in file module
- PR #28662: (cachedout) Add note about disabling master_alive_interval
- PR #28627: (twangboy) Backport win_useradd
- PR #28617: (cachedout) Set restrictive umask on module sync
- PR #28622: (gravyboat) Update puppet module wording
- PR #28563: (s0undt3ch) [2015.5] Update to latest bootstrap script v2015.11.04
- PR #28541: (twangboy) Fixed problem with system.set_computer_name
- PR #28537: (jfindlay) decode filename to utf-8 in file.recurse state
• PR #28529: (rallytime) Update contributing and documentation pages to recommend submitting against branches

• PR #28548: (nmadhok) [Backport] [2015.5] Tasks can be in queued state instead of running

• PR #28531: (rallytime) Add versionadded directives to virtualenv_mod state/module

• PR #28508: (twangboy) Fixed windows tests

• PR #28525: (rallytime) Fix spacing in doc examples for boto_route53 state and module

• PR #28517: (rallytime) Add state_auto_order defaults to True note to ordering docs

• PR #28512: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5

• PR #28448: (gwaters) added a note to the tutorial for redhat derivatives

• PR #28406: (rallytime) Back-port #28381 to 2015.5

• PR #28413: (rallytime) Back-port #28400 to 2015.5

• PR #28366: (erchn) mark repo not enabled when pkgrepo state passes in disable: True

• PR #28373: (beverlcl) Fixing bug `#28372` for use_carrier option on bonding network interfaces.

• PR #28359: (rallytime) Back-port #28358 to 2015.5

• PR #28346: (twangboy) Fix installer

• PR #28315: (gwaters) Adding a working example of setting pillar data on the cli

• PR #28211: (terminalmage) Fix for ext_pillar being compiled twice in legacy git_pillar code (2015.5 branch)

• PR #28263: (cachedout) New channel for event.send

• PR #28293: (cachedout) Minor grammar changes

• PR #28271: (gwaters) Update tutorial documentation

• PR #28280: (0xf10e) Correct Jinja function load_* to import_*

• PR #28255: (cachedout) Add __cli opt

• PR #28213: (rallytime) If record returned None, don't continue with the state. Something went wrong

• PR #28238: (basepi) [2015.5] Fix schedule.present always diffing

• PR #28174: (lorengordon) Add support for multiline regex in file.replace

• PR #28175: (twangboy) Fixes `#19673`_

• PR #28140: (rallytime) Add OpenBSD installation documentation to 2015.5 branch

• PR #28138: (rallytime) Back-port #28130 EC2 Sizes Only portion to 2015.5

• PR #28097: (jacksontj) For all multi-part messages, check the headers. If the header is not ...

• PR #28117: (rallytime) Clean up stacktrace when master can't be reached in lxc cloud driver

• PR #28110: (terminalmage) Add explanation of file_client: local setting masterless mode

• PR #28109: (rallytime) Add created reactor event to lxc cloud driver

• PR #27996: (rallytime) Don't fail if pip package is already present and pip1 is installed

• PR #28056: (rallytime) Back-port #28033 to 2015.5

• PR #28059: (rallytime) Back-port #28040 to 2015.5

• PR #28047: (cachedout) Restore FTP functionality to file client
• PR #28032: (twangboy) Fixed win_path.py
• PR #28037: (rallytime) Back-port #28003 to 2015.5
• PR #28031: (jacobhammons) Updated release notes with additional CVE information
• PR #28008: (jfindlay) platform independent line endings in hosts mod
• PR #28012: (rallytime) Clean up stack trace when something goes wrong with minion output
• PR #27995: (jacobhammons) added link to grains security FAQ to targeting and pillar topics.
• PR #27986: (jacobhammons) Changed current release to 5.6 and added CVE to release notes
• PR #27913: (pass-by-value) Set default
• PR #27876: (terminalmage) 2015.5 branch: Fix traceback when 2015.8 git ext_pillar config schema used
• PR #27726: (jfindlay) deprecate hash_hostname in favor of hash_known_hosts
• PR #27776: (jfindlay) return message when local jobs_cache not found
• PR #27766: (jfindlay) better check for debian userdel error
• PR #27758: (iggy) Remove redundant text from syslog returner
• PR #27841: (terminalmage) Detect Manjaro Linux as Arch derivative
• PR #27852: (rallytime) Back-port #27806 to 2015.5
• PR #27838: (basepi) [2015.5] Fix highstate outputter for jobs.lookup_jid
• PR #27791: (eguven) 2015.5 postgres_user groups backport
• PR #27759: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5
• PR #27732: (jacobhammons) update docs for __virtual__ and __virtualname__
• PR #27747: (Sacro) Chocolatey doesn't have a help command.
• PR #27733: (jacobhammons) hardening topic - updates to docs.saltstack.com theme
• PR #27706: (jacobhammons) Assorted doc bugs
• PR #27695: (rallytime) Back-port #27671 to 2015.5
• PR #27524: (jfindlay) parse pkgng output in quiet mode for >= 1.6.1
• PR #27686: (rallytime) Back-port #27476 to 2015.5
• PR #27684: (rallytime) Back-port #27656 to 2015.5
• PR #27683: (rallytime) Back-port #27659 to 2015.5
• PR #27682: (rallytime) Back-port #27566 to 2015.5
• PR #27681: (rallytime) Back-port #25928 to 2015.5
• PR #27680: (rallytime) Back-port #27535 to 2015.5
• PR #27442: (JaseFace) Ensure we pass on the enable setting if present, or use the default of True if not in build_schedule_item()
• PR #27641: (rallytime) Gate the psutil import and add depends doc for diskusage beacon
• PR #27644: (rallytime) Back-port #27640 to 2015.5
• PR #27612: (rallytime) Fix GCE external_ip stacktraces in 2015.5
• PR #27568: (jacobhammons) regenerated man pages
37.2.23 Salt 2015.5.8 Release Notes

Security Fix

CVE-2015-8034: Saving state.sls cache data to disk with insecure permissions

This affects users of the state.sls function. The state run cache on the minion was being created with incorrect permissions. This file could potentially contain sensitive data that was inserted via jinja into the state SLS files. The permissions for this file are now being set correctly. Thanks to @zmalone for bringing this issue to our attention.

Changes

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Generated at: 2015-11-23T23:16:23Z

Total Merges: 118

Changes:

- PR #29128: (cachedout) Set a safer default value for ret in saltmod
- PR #29122: (cachedout) Fix broken state orchestration
- PR #29096: (rallytime) Back-port #29093 to 2015.5
- PR #29084: (rallytime) Back-port #29055 to 2015.5
- PR #29083: (rallytime) Back-port #29053 to 2015.5
- PR #28932: (twangboy) Fixed user.present / user.absent in windows
- PR #29011: (rallytime) Back-port #28630 to 2015.5
- PR #28982: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5
- PR #28949: (whiteinge) Add sync_sdb execution function
- PR #28930: (twangboy) Added missing import mmap required by file.py
- PR #28908: (rallytime) A couple of spelling fixes for doc conventions page.
- PR #28902: (whiteinge) Fix missing JSON support for /keys endpoint
- PR #28897: (rallytime) Back-port #28873 to 2015.5
- PR #28871: (basepi) [2015.5] Fix command generation for mdadm.assemble
- PR #28864: (jfindlay) add 2015.5.7 release notes
- PR #28731: (garethgreenaway) Fixes to salt scheduler in 2015.5, ensuring that return_job is only used on minion scheduler
- PR #28857: (rallytime) Back-port #28851 to 2015.5
- PR #28856: (rallytime) Back-port #28853 to 2015.5
- PR #28832: (basepi) [2015.5] Backport #28826
- PR #28833: (basepi) [2015.5] Increase the default gather_job_timeout
- PR #28829: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5
- PR #28756: (MrCitron) Fix `#25775`_
- PR #28786: (chrigl) closes `#28783`_

37.2.24 Salt 2015.5.9 Release Notes

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):
Generated at: 2016-01-08T23:02:31Z

Total Merges: 44

Changes:
• PR #30237: (jacobhammons) Updated man pages and doc version for 2015.5.9
• PR #30207: (rallytime) Use correct spacing in rabbitmq state examples
• PR #30191: (jacobhammons) Updated doc site banners
• PR #30125: (abednarik) Update user home event when createhome is set to False
• PR #30127: (jsutton) Updating documentation and example minion config for random_master/master_shuffle.
• PR #30110: (markckimball) Fixed flag sent to salt.utils.http in order for verify_ssl to work correctly
• PR #30093: (zmalone) Noting that file_roots and `state tree` should both be avoided
• PR #30097: (cachedout) Note concern about cleartext password in docs for shadow.gen_password
• PR #30089: (mprezioso) Fixes terminology and adds more accurate details about the algorithms
• PR #30086: (cachedout) Document that gitfs needs recent libs
• PR #30070: (cachedout) Add documentation on debugging salt-ssh
• PR #30059: (mprezioso) Fixes wrong function scope

37.2. Previous Releases
• PR #30025: (jtand) Skipping some Boto tests until resolved moto issue
• PR #29949: (aletourneau) Enhanced netscaler docstring
• PR #29941: (cachedout) Fix spelling error in boto_vpc
• PR #29908: (cachedout) Allow kwargs to be passed to pacman provide for update func
• PR #29909: (abednarik) FreeBSD pkgng fix for non-interactive install.
• PR #29730: (rallytime) Update docker-py version requirement to 0.6.0 for dockerio.py files
• PR #29715: (rallytime) Install correct package version, if provided, for npm state.
• PR #29721: (terminalmage) Fix display of multiline strings when iterating over a list
• PR #29646: (rallytime) Don’t stacktrace on kwargs.get if kwargs=None
• PR #29673: (rallytime) Default value should be False and not `False`
• PR #29527: (jfindlay) 2015.5.7 notes: add note about not being released
• PR #29539: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5
• PR #29504: (rallytime) Document userdata_file option for EC2 driver
• PR #29507: (rallytime) Switch volumes and del_*_on_destroy example ordering
• PR #29469: (abednarik) Added Documentation note in salt cloud.
• PR #29461: (dmyerscough) Fix resource limits, systemd sets the default too small
• PR #29439: (rallytime) Back-port #28656 to 2015.5
• PR #29418: (jacobhammons) Added CVE 2015-8034 to 2015.5.8 release notes
• PR #29389: (jacobhammons) updated version numbers in documentation
• PR #28501: (twangboy) Requested fixes for 26898
• PR #29348: (jtand) Fixes an file.search on python2.6
• PR #29336: (rallytime) Back-port #29276 to 2015.5
• PR #29333: (rallytime) Back-port #29280 to 2015.5
• PR #29316: (basepi) [2015.5] Merge forward from 2014.7 to 2015.5
• PR #29216: (clan) size is 0 doesn’t mean no data, e.g. /proc/version
• PR #29261: (attiasr) fix incorrect reinstallation of windows pkg
• PR #29214: (cro) Doc for salt.utils.http should say verify_ssl not ssl_verify.
• PR #29204: (lorenngordon) Use os.path.join to return full path to ca bundle

37.2.25 Salt 2014.7.0 Release Notes - Codename Helium

This release is the largest Salt release ever, with more features and commits then any previous release of Salt. Everything from the new RAET transport to major updates in Salt Cloud and the merging of Salt API into the main project.

Important: The Fedora/RHEL/CentOS salt-master package has been modified for this release. The following components of Salt have been broken out and placed into their own packages:

• salt-syndic
- salt-cloud
- salt-ssh

When the `salt-master` package is upgraded, these components will be removed, and they will need to be manually installed.

**Important:** Compound/pillar matching have been temporarily disabled for the `mine` and `publish` modules for this release due to the possibility of inferring pillar data using pillar glob matching. A proper fix is now in the 2014.7 branch and scheduled for the 2014.7.1 release, and compound matching and non-globbing pillar matching will be re-enabled at that point.

Compound and pillar matching for normal salt commands are unaffected.

**New Transport!**

**RAET Transport Option**

This has been a HUGE amount of work, but the beta release of Salt with RAET is ready to go. RAET is a reliable queuing transport system that has been developed in partnership with a number of large enterprises to give Salt an alternative to ZeroMQ and a way to get Salt to scale well beyond tens of thousands of servers. Unlike ZeroMQ, RAET is completely asynchronous in every aspect of its operation and has been developed using the flow programming paradigm. This allows for many new capabilities to be added to Salt in the upcoming releases.

Please keep in mind that this is a beta release of RAET and we hope for bugs to be worked out, performance to be better realized and more in the 2015.5.0 release.

Simply stated, users running Salt with RAET should expect some hiccups as we hammer out the update. This is a BETA release of Salt RAET.

For information about how to use Salt with RAET please see the [tutorial](https://pypi.python.org/pypi/salt-ssh/).

**Salt SSH Enhancements**

Salt SSH has just entered a new league, with substantial updates and improvements to make salt-ssh more reliable and easier then ever! From new features like the ansible roster and fileservers backends to the new pypi salt-ssh installer to lowered deps and a swath of bugfixes, salt-ssh is basically reborn!

**Install salt-ssh Using pip**

Salt-ssh is now pip-installable!

```
https://pypi.python.org/pypi/salt-ssh/
```

Pip will bring in all of the required deps, and while some deps are compiled, they all include pure python implementations, meaning that any compile errors which may be seen can be safely ignored.

```
$ pip install salt-ssh
```
Fileserver Backends

Salt-ssh can now use the salt fileserver backend system. This allows for the gitfs, hgfs, s3, and many more ways to centrally store states to be easily used with salt-ssh. This also allows for a distributed team to easily use a centralized source.

Saltfile Support

The new saltfile system makes it easy to have a user specific custom extended configuration.

Ext Pillar

Salt-ssh can now use the external pillar system. Making it easier then ever to use salt-ssh with teams.

No More sshpass

Thanks to the enhancements in the salt vt system, salt-ssh no longer requires sshpass to send passwords to ssh. This also makes the manipulation of ssh calls substantially more flexible, allowing for intercepting ssh calls in a much more fluid way.

Pure Python Shim

The salt-ssh call originally used a shell script to discover what version of python to execute with and determine the state of the ssh code deployment. This shell script has been replaced with a pure python version making it easy to increase the capability of the code deployment without causing platform inconsistency issues with different shell interpreters.

Custom Module Delivery

Custom modules are now seamlessly delivered. This makes the deployment of custom grains, states, execution modules and returners a seamless process.

CP Module Support

Salt-ssh now makes simple file transfers easier then ever! The cp module allows for files to be conveniently sent from the salt fileservice system down to systems.

More Thin Directory Options

Salt ssh functions by copying a subset of the salt code, or salt thin down to the target system. In the past this was always transferred to /tmp/salt and cached there for subsequent commands.

Now, salt thin can be sent to a random directory and removed when the call is complete with the -W option. The new -W option still uses a static location but will clean up that location when finished.

The default salt thin location is now user defined, allowing multiple users to cleanly access the same systems.
State System Enhancements

New Imperative State Keyword "Listen"

The new listen and listen_in keywords allow for completely imperative states by calling the mod_watch() routine after all states have run instead of re-ordering the states.

Mod Aggregate Runtime Manipulator

The new mod_aggregate system allows for the state system to rewrite the state data during execution. This allows for state definitions to be aggregated dynamically at runtime.

The best example is found in the pkg state. If mod_aggregate is turned on, then when the first pkg state is reached, the state system will scan all of the other running states for pkg states and take all other packages set for install and install them all at once in the first pkg state.

These runtime modifications make it easy to run groups of states together. In future versions, we hope to fill out the mod_aggregate system to build in more and more optimizations.

For more documentation on mod_aggregate, see the documentation.

New Requisites: onchanges and onfail

The new onchanges and onchanges_in requisites make a state apply only if there are changes in the required state. This is useful to execute post hooks after changes occur on a system.

The other new requisites, onfail, and onfail_in, allow for a state to run in reaction to the failure of another state.

For more information about these new requisites, see the requisites documentation.

Global onlyif and unless

The onlyif and unless options can now be used for any state declaration.

Use names to expand and override values

The names declaration in Salt's state system can now override or add values to the expanded data structure. For example:

```yaml
my_users:
  user.present:
    - names:
      - larry
      - curly
      - moe:
        - shell: /bin/zsh
        - groups:
          - wheel
        - shell: /bin/bash
```
Major Features

Scheduler Additions

The Salt scheduler system has received MAJOR enhancements, allowing for cron-like scheduling and much more granular timing routines. See here for more info.

Red Hat 7 Family Support

All the needed additions have been made to run Salt on RHEL 7 and derived OSes like CentOS and Scientific.

Fileserver Backends in salt-call

Fileserver backends like gitfs can now be used without a salt master! Just add the fileserver backend configuration to the minion config and execute salt-call. This has been a much-requested feature and we are happy to finally bring it to our users.

Amazon Execution Modules

An entire family of execution modules further enhancing Salt's Amazon Cloud support. They include the following:

- Autoscale Groups (includes state support) -- related: Launch Control states
- Cloud Watch (includes state support)
- Elastic Cache (includes state support)
- Elastic Load Balancer (includes state support)
- IAM Identity and Access Management (includes state support)
- Route53 DNS (includes state support)
- Security Groups (includes state support)
- Simple Queue Service (includes state support)

LXC Runner Enhancements

BETA The Salt LXC management system has received a number of enhancements which make running an LXC cloud entirely from Salt an easy proposition.

Next Gen Docker Management

The Docker support in Salt has been increased at least ten fold. The Docker API is now completely exposed and Salt ships with Docker data tracking systems which make automating Docker deployments very easy.

Peer System Performance Improvements

The peer system communication routines have been refined to make the peer system substantially faster.
SDB

Encryption at rest for configs

GPG Renderer

Encrypted pillar at rest

OpenStack Expansion

Lots of new OpenStack stuff

Queues System

Ran change external queue systems into Salt events

Multi Master Failover Additions

Connecting to multiple masters is more dynamic then ever

Chef Execution Module

Managing Chef with Salt just got even easier!

salt-api Project Merge

The salt-api project has been merged into Salt core and is now available as part of the regular salt-master package install. No API changes were made, the salt-api script and init scripts remain intact.

salt-api has always provided Yet Another Pluggable Interface to Salt (TM) in the form of `netapi` modules. These are modules that bind to a port and start a service. Like many of Salt’s other module types, netapi modules often have library and configuration dependencies. See the documentation for each module for instructions.

See also:

The full list of netapi modules.

Synchronous and Asynchronous Execution of Runner and Wheel Modules

salt.runner.RunnerClient and salt.wheel.WheelClient have both gained complimentary cmd_sync and cmd_async methods allowing for synchronous and asynchronous execution of any Runner or Wheel module function, all protected using Salt’s external authentication system. salt-api benefits from this addition as well.

rest_cherrypy Additions

The rest_cherrypy netapi module provides the main REST API for Salt.
Web Hooks

This release of course includes the Web Hook additions from the most recent salt-api release, which allows external services to signal actions within a Salt infrastructure. External services such as Amazon SNS, Travis-CI, or GitHub, as well as internal services that cannot or should not run a Salt minion daemon can be used as first-class components in Salt’s rich orchestration capabilities.

The raw HTTP request body is now available in the event data. This is sometimes required information for checking an HMAC signature in order to verify a HTTP request. As an example, Amazon or GitHub requests are signed this way.

Generating and Accepting Minion Keys

The /key convenience URL generates a public and private key for a minion, automatically pre-accepts the public key on the Salt Master, and returns both keys as a tarball for download.

This allows for easily bootstrapping the key on a new minion with a single HTTP call, such as with a Kickstart script, all using regular shell tools.

```bash
curl -sS http://salt-api.example.com:8000/keys \
  -d mid=jerry \
  -d username=kickstart \
  -d password=kickstart \
  -d eauth=pam \
  -o jerry-salt-keys.tar
```

Fileservr Backend Enhancements

All of the fileserver backends have been overhauled to be faster, lighter, and more reliable. The VCS backends (gitfs, hgfs, and svnfs) have also received a lot of new features.

Additionally, most config parameters for the VCS backends can now be configured on a per-remote basis, allowing for global config parameters to be overridden for a specific gitfs/hgfs/svnfs remote.

New gitfs Features

Pygit2 and Dulwich

In addition to supporting GitPython, support for pygit2 (0.20.3 and newer) and dulwich have been added. Provided a compatible version of pygit2 is installed, it will now be the default provider. The config parameter gitfs_provider has been added to allow one to choose a specific provider for gitfs.

Mountpoints

Prior to this release, to serve a file from gitfs at a salt fileserver URL of salt://foo/bar/baz.txt, it was necessary to ensure that the parent directories existed in the repository. A new config parameter gitfs_mountpoint allows gitfs remotes to be exposed starting at a user-defined salt:// URL.
Environment Whitelisting/Blacklisting

By default, gitfs will expose all branches and tags as Salt fileserver environments. Two new config parameters, `gitfs_env_whitelist` and `gitfs_env_blacklist`, allow more control over which branches and tags are exposed. More detailed information on how these two options work can be found in the *Gitfs Walkthrough*.

Expanded Authentication Support

As of *pygit2* 0.20.3, both http(s) and SSH key authentication are supported, and Salt now also supports both authentication methods when using `pygit2`. Keep in mind that `pygit2` 0.20.3 is not yet available on many platforms, so those who had been using authenticated git repositories with a passphraseless key should stick to GitPython if a new enough `pygit2` is not yet available for the platform on which the master is running.

A full explanation of how to use authentication can be found in the *Gitfs Walkthrough*.

New **hgfs** Features

**Mountpoints**

This feature works exactly like its *gitfs counterpart*. The new config parameter is called `hgfs_mountpoint`.

**Environment Whitelisting/Blacklisting**

This feature works exactly like its *gitfs counterpart*. The new config parameters are called `hgfs_env_whitelist` and `hgfs_env_blacklist`.

New **svnfs** Features

**Mountpoints**

This feature works exactly like its *gitfs counterpart*. The new config parameter is called `svnfs_mountpoint`.

**Environment Whitelisting/Blacklisting**

This feature works exactly like its *gitfs counterpart*. The new config parameters are called `svnfs_env_whitelist` and `svnfs_env_blacklist`.

**Configurable Trunk/Branches/Tags Paths**

Prior to this release, the paths where trunk, branches, and tags were located could only be in directories named "trunk", "branches", and "tags" directly under the root of the repository. Three new config parameters (`svnfs_trunk`, `svnfs_branches`, and `svnfs_tags`) allow SVN repositories which are laid out differently to be used with svnfs.
New **minionfs** Features

**Mountpoint**

This feature works exactly like its gitfs counterpart. The new config parameter is called `minionfs_mountpoint`. The one major difference is that, as minionfs doesn’t use multiple remotes (it just serves up files pushed to the master using `cp.push`) there is no such thing as a per-remote configuration for `minionfs_mountpoint`.

**Changing the Saltenv from Which Files are Served**

A new config parameter (`minionfs_env`) allows minionfs files to be served from a Salt fileserver environment other than `base`.

**Minion Whitelisting/Blacklisting**

By default, minionfs will expose the pushed files from all minions. Two new config parameters, `minionfs_whitelist`, and `minionfs_blacklist`, allow minionfs to be restricted to serve files from only the desired minions.

**Pyobjects Renderer**

Salt now ships with with the *Pyobjects Renderer* that allows for construction of States using pure Python with an idiomatic object interface.

**New Modules**

In addition to the Amazon modules mentioned above, there are also several other new execution modules:

- Oracle
- Random
- Redis
- Amazon Simple Queue Service
- Block Device Management
- CoreOS etcd
- Genesis
- InfluxDB
- Server Density
- Twilio Notifications
- Varnish
- ZNC IRC Bouncer
- SMTP
New Runners

- Map/Reduce Style
- Queue

New External Pillars

- CoreOS etcd

New Salt-Cloud Providers

- Aliyun ECS Cloud
- LXC Containers
- Proxmox (OpenVZ containers & KVM)

Salt Call Change

When used with a returner, salt-call now contacts a master if --local is not specified.

Deprecations

salt.modules.virtualenv_mod

- Removed deprecated memoize function from salt/utils/__init__.py (deprecated)
- Removed deprecated no_site_packages argument from create function (deprecated)
- Removed deprecated check_dns argument from minion_config and apply_minion_config functions (deprecated)
- Removed deprecated OutputOptionsWithTextMixIn class from salt/utils/parsers.py (deprecated)
- Removed the following deprecated functions from salt/modules/ps.py: - physical_memory_usage (deprecated) - virtual_memory_usage (deprecated) - cached_physical_memory (deprecated) - physical_memory_buffers (deprecated)
- Removed deprecated cloud arguments from cloud_config function in salt/config.py: -vm_config (deprecated) - vm_config_path (deprecated)
- Removed deprecated libcloud_version function from salt/cloud/libcloudfuncs.py (deprecated)
- Removed deprecated CloudConfigMixIn class from salt/utils/parsers.py (deprecated)

37.2.26 Salt 2014.7.1 Release Notes

release 2015-01-12

Version 2014.7.1 is a bugfix release for 2014.7.0. The changes include:

- Fixed gitfs serving symlinks in file.recurse states (issue 17700)
• Fixed holding of multiple packages (YUM) when combined with version pinning (issue 18468)
• Fixed use of Jinja templates in masterless mode with non-roots fileserver backend (issue 17963)
• Re-enabled pillar and compound matching for mine and publish calls. Note that pillar globbing is still disabled for those modes, for security reasons. (issue 17194)
• Fix for tty: True in salt-ssh (issue 16847)
• Fix for supervisord states when supervisor not installed to system python (issue 18044)
• Fix for logging when log_level='quiet' for cmd.run (issue 19479)

37.2.27 Salt 2014.7.2 Release Notes

release 2015-02-09

Version 2014.7.2 is a bugfix release for 2014.7.0. The changes include:
• Fix erroneous warnings for systemd service enabled check (issue 19606)
• Fix FreeBSD kernel module loading, listing, and persistence kmod (issue 197151, issue 19682)
• Allow case-sensitive npm package names in the npm state. This may break behavior for people expecting the state to lowercase their npm package names for them. The npm module was never affected by mandatory lowercasing. (issue 20329)
• Deprecate the activate parameter for pip.install for both the module and the state. If bin_env is given and points to a virtualenv, there is no need to activate that virtualenv in a shell for pip to install to the virtualenv.
• Fix a file-locking bug in gitfs (issue 18839)
• Deprecated archive_user in favor of standardized user parameter in state and added group parameter.

37.2.28 Salt 2014.7.3 Release Notes

release TBA

Version 2014.7.3 is a bugfix release for 2014.7.0.

Changes:
• Multi-master minions mode no longer route fileclient operations asymetrically. This fixes the source of many multi-master bugs where the minion would become unresponsive from one or more masters.
• Fix bug wherein network.iface could produce stack traces.
• net.arp will no longer be made available unless arp is installed on the system.
• Major performance improvements to Saltnado
• Allow KVM module to operate under KVM itself or VMWare Fusion
• Various fixes to the Windows installation scripts
• Fix issue where the syndic would not correctly propagate loads to the master job cache.
• Improve error handling on invalid /etc/network/interfaces file in salt networking modules
• Fix bug where a response status was not checked for in fileclient.get_url
• Enable eauth when running salt in batch mode
• Increase timeout in Boto Route53 module
• Fix bugs with Salt's `tar` module option parsing
• Fix parsing of NTP servers on Windows
• Fix issue with blockdev tuning not reporting changes correctly
• Update to the latest Salt bootstrap script
• Update Linode salt-cloud driver to use either linode-python or apache-libcloud
• Fix for s3.query function to return correct headers
• Fix for s3.head returning None for files that exist
• Fix the disable function in win_service module so that the service is disabled correctly
• Fix race condition between master and minion when making a directory when both daemons are on the same host
• Fix an issue where file.recurse would fail at the root of an svn repo when the repo has a mountpoint
• Fix an issue where file.recurse would fail at the root of an hgfs repo when the repo has a mountpoint
• Fix an issue where file.recurse would fail at the root of an gitfs repo when the repo has a mountpoint
• Add status.master capability for Windows.
• Various fixes to ssh_known_hosts
• Various fixes to states.network bonding for Debian
• The debian_ip.get_interfaces module no longer removes nameservers.
• Better integration between grains.virtual and systemd-detect-virt and virt-what
• Fix traceback in sysctl.present state output
• Fix for issue where mount.mounted would fail when superopts were not a part of mount.active (extended=True). Also mount.mounted various fixes for Solaris and FreeBSD.
• Fix error where datetimes were not correctly safeguarded before being passed into msgpack.
• Fix file.replace regressions. If the pattern is not found, and if dry run is False, and if backup is False, and if a pre-existing file exists with extension .bak, then that backup file will be overwritten. This backup behavior is a result of how fileinput works. Fixing it requires either passing through the file twice (the first time only to search for content and set a flag), or rewriting file.replace so it doesn't use fileinput
• VCS filereserver fixes/optimizations
• Catch fileserver configuration errors on master start
• Raise errors on invalid gitfs configurations
• set_locale when locale file does not exist (Redhat family)
• Fix to correctly count active devices when created mdadm array with spares
• Fix to correctly target minions in batch mode
• Support ssh:// urls using the gitfs dulwhich backend
• New filesrerver runner
• Fix various bugs with argument parsing to the publish module.
• Fix disk.usage for Synology OS
• Fix issue with tags occurring twice with docker.pulled
• Fix incorrect key error in SMTP returner
• Fix condition which would remount loopback filesystems on every state run
• Remove requisites from listens after they are called in the state system
• Make system implementation of service.running aware of legacy service calls
• Fix issue where publish.publish would not handle duplicate responses gracefully.
• Accept Kali Linux for aptpkg salt execution module
• Fix bug where cmd.which could not handle a dirname as an argument
• Fix issue in ps.pgrep where exceptions were thrown on Windows.

Known issues:
• In multimaster mode, a minion may become temporarily unresponsive if modules or pillars are refreshed at the same time that one or more masters are down. This can be worked around by setting `auth_timeout` and `auth_tries` down to shorter periods.

37.2.29 Salt 2014.7.4 Release Notes

release 2015-03-30

Version 2014.7.4 is a bugfix release for 2014.7.0.

This is a security release. The security issues fixed have only been present since 2014.7.0, and only users of the two listed modules are vulnerable. The following CVEs have been resolved:

• CVE-2015-1838 SaltStack: insecure /tmp file handling in salt/modules/serverdensity_device.py
• CVE-2015-1839 SaltStack: insecure /tmp file handling in salt/modules/chef.py

Changes:

• Multi-master minions mode no longer route fileclient operations asymmetrically. This fixes the source of many multi-master bugs where the minion would become unresponsive from one or more masters.
• Fix bug wherein network.iface could produce stack traces.
• net.arp will no longer be made available unless arp is installed on the system.
• Major performance improvements to SaltNado
• Allow KVM module to operate under KVM itself or VMWare Fusion
• Various fixes to the Windows installation scripts
• Fix issue where the syndic would not correctly propagate loads to the master job cache.
• Improve error handling on invalid /etc/network/interfaces file in salt networking modules
• Fix bug where a response status was not checked for in fileclient.get_url
• Enable eauth when running salt in batch mode
• Increase timeout in Boto Route53 module
• Fix bugs with Salt’s `tar` module option parsing
• Fix parsing of NTP servers on Windows
• Fix issue with blockdev tuning not reporting changes correctly
• Update to the latest Salt bootstrap script
• Update Linode salt-cloud driver to use either linode-python or apache-libcloud
• Fix for s3.query function to return correct headers
• Fix for s3.head returning None for files that exist
• Fix the disable function in win_service module so that the service is disabled correctly
• Fix race condition between master and minion when making a directory when both daemons are on the same host
• Fix an issue where file.recurse would fail at the root of an svn repo when the repo has a mountpoint
• Fix an issue where file.recurse would fail at the root of an hgfs repo when the repo has a mountpoint
• Fix an issue where file.recurse would fail at the root of an gitfs repo when the repo has a mountpoint
• Add status.master capability for Windows.
• Various fixes to ssh_known_hosts
• Various fixes to states.network bonding for Debian
• The debian_ip.get_interfaces module no longer removes nameservers.
• Better integration between grains.virtual and systemd-detect-virt and virt-what
• Fix traceback in sysctl.present state output
• Fix for issue where mount.mounted would fail when superopts were not a part of mount.active (extended=True). Also mount.mounted various fixes for Solaris and FreeBSD.
• Fix error where datetimes were not correctly safeguarded before being passed into msgpack.
• Fix file.replace regressions. If the pattern is not found, and if dry run is False, and if backup is False, and if a pre-existing file exists with extension .bak, then that backup file will be overwritten. This backup behavior is a result of how fileinput works. Fixing it requires either passing through the file twice (the first time only to search for content and set a flag), or rewriting file.replace so it doesn’t use fileinput
• VCS fileserver fixes/optimizations
• Catch fileserver configuration errors on master start
• Raise errors on invalid gitfs configurations
• set_locale when locale file does not exist (Redhat family)
• Fix to correctly count active devices when created mdadm array with spares
• Fix to correctly target minions in batch mode
• Support ssh:// urls using the gitfs dulwhich backend
• New fileserver runner
• Fix various bugs with argument parsing to the publish module.
• Fix disk.usage for Synology OS
• Fix issue with tags occurring twice with docker.pulled
• Fix incorrect key error in SMTP returner
• Fix condition which would remount loopback filesystems on every state run
• Remove requisites from listsens after they are called in the state system
• Make system implementation of service.running aware of legacy service calls
• Fix issue where publish.publish would not handle duplicate responses gracefully.
• Accept Kali Linux for aptpkg salt execution module
• Fix bug where cmd.which could not handle a dirname as an argument
• Fix issue in ps.pgrep where exceptions were thrown on Windows.

Known issues:
• In multimaster mode, a minion may become temporarily unresponsive if modules or pillars are refreshed at the same time that one or more masters are down. This can be worked around by setting `auth_timeout` and `auth_tries` down to shorter periods.
• There are known issues with batch mode operating on the incorrect number of minions. This bug can be patched with the change in Pull Request #22464.
• The `fun`, `state`, and `unless` keywords are missing from the state internals, which can cause problems running some states. This bug can be patched with the change in Pull Request #22365.

37.2.30 Salt 2014.7.5 Release Notes

release 2015-04-16

Version 2014.7.5 is a bugfix release for 2014.7.0.

Changes:
• Fixed a key error bug in salt-cloud
• Updated man pages to better match documentation
• Fixed bug concerning high CPU usage with salt-ssh
• Fixed bugs with remounting cvfs and fuse filesystems
• Fixed bug with allowing requisite tracking of entire sls files
• Fixed bug with aptpkg.mod_repo returning OK even if apt-add-repository fails
• Increased frequency of ssh terminal output checking
• Fixed malformed locale string in localmod module
• Fixed checking of available version of package when accept_keywords were changed
• Fixed bug to make git.latest work with empty repositories
• Added `**kwargs` to service.mod_watch which removes warnings about `enable` and `__reqs__` not being supported by the function
• Improved state comments to not grow so quickly on failed requisites
• Added force argument to service to trigger force_reload
• Fixed bug to andle pkgrepo keyids that have been converted to int
• Fixed module.portage_config bug with appending accept_keywords
• Fixed bug to correctly report disk usage on windows minion
• Added the ability to specify key prefix for S3 ext_pillar
• Fixed issues with batch mode operating on the incorrect number of minions
• Fixed a bug with the proxmox cloud provider stacktracing on disk definition
• Fixed a bug with the changes dictionary in the file state
• Fixed the TCP keep alive settings to work better with SREQ caching
• Fixed many bugs within the iptables state and module
• Fixed bug with states by adding *fun, state, and unless* to the state runtime internal keywords listing
• Added ability to eAuth against Active Directory
• Fixed some salt-ssh issues when running on Fedora 21
• Fixed grains.get_or_set_hash to work with multiple entries under same key
• Added better explanations and more examples of how the Reactor calls functions to docs
• Fixed bug to not pass *ex_config_drive* to libcloud unless it's explicitly enabled
• Fixed bug with pip.install on windows
• Fixed bug where puppet.run always returns a 0 retcode
• Fixed race condition bug with minion scheduling via pillar
• Made efficiency improvements and bug fixes to the windows installer
• Updated environment variables to fix bug with pygit2 when running salt as non-root user
• Fixed cas behavior on data module -- data.cas was not saving changes
• Fixed GPG rendering error
• Fixed strace error in virt.query
• Fixed stacktrace when running chef-solo command
• Fixed possible bug wherein uncaught exceptions seem to make zmq3 tip over when threading is involved
• Fixed argument passing to the reactor
• Fixed glibc caching to prevent bug where salt-minion getaddrinfo in dns_check() never got updated nameservers

Known issues:

• In multimaster mode, a minion may become temporarily unresponsive if modules or pillars are refreshed at the same time that one or more masters are down. This can be worked around by setting `auth_timeout` and `auth_tries` down to shorter periods.

### 37.2.31 Salt 2014.7.6 Release Notes

**release** 2015-05-18

Version 2014.7.6 is a bugfix release for 2014.7.0.

This release is a security release. A minor issue was found, as cited below:

- CVE-2015-4017 -- Certificates are not verified when connecting to server in the Aliyun and Proxmox modules

Only users of the Aliyun or Proxmox cloud modules are at risk. The vulnerability does not exist in the latest 2015.5.0 release of Salt.

Changes:

- salt.runners.cloud.action() has changed the *fun* keyword argument to *func*. Please update any calls to this function in the cloud runner.

Extended Changelog Courtesy of Todd Stansell ([https://github.com/tjstansell/salt-changelogs](https://github.com/tjstansell/salt-changelogs)):

- PR #23810: *(rallytime)* Backport #23757 to 2014.7 @ 2015-05-18T15:30:21Z
  - PR #23757: *(clan)* use abspath, do not eliminating symlinks | refs: #23810
-- aee00c8 Merge pull request #23810 from rallytime/bp-23757
-- fb32c32 use abspath, do not eliminating symlinks

• PR #23809: (rallytime) Fix virtualport section of virt.get_nics loop @ 2015-05-18T15:30:09Z
  -- ISSUE #20198: (jeftang) virt.get_graphics, virt.get_nics are broken, in turn breaking other things | refs: #23809

  -- 2da98b5 if it is ipv6 ip_to_int will fail

• PR #23488: (cellscape) LXC cloud fixes @ 2015-05-15T18:09:35Z
  -- ISSUE #16424: (stanvit) salt-run cloud.create fails with saltify
  -- d9af0c3 Merge pull request #23488 from cellscape/lxc-cloud-fixes
  -- 64250a6 Remove profile from opts after creating LXC container
  -- c4047d2 Set destroy=True in opts when destroying cloud instance
  -- 9e1311a Store instance names in opts when performing cloud action
  -- 934bc57 Correctly pass custom env to lxc-attach
  -- 7fb85f7 Preserve test=True option in cloud states
  -- 9771b5a Fix detection of absent LXC container in cloud state
  -- fb24f0c Report failure when failed to create/clone LXC container
  -- 2d9a2a2 Avoid shadowing variables in lxc module
  -- 792e102 Allow overriding profile options in lxc.cloud_init_interface
  -- 42bd64b Return changes on successful lxc.create from salt-cloud
  -- 4409eab Return correct result when creating cloud LXC container
  -- 377015c Issue #16424: List all providers when creating salt-cloud instance without profile

• PR #23748: (basepi) [2014.7] Log salt-ssh roster render errors more assertively and verbosely @ 2015-05-14T22:38:10Z
  -- ISSUE #22332: (rallytime) [salt-ssh] Add a check for host in /etc/salt/roster | refs: #23748
  -- 808bbe1 Merge pull request #23748 from basepi/salt-ssh.roster.host.check
  -- bc53e04 Log entire exception for render errors in roster
- 753de6a Log render errors in roster to error level
- e01a7a9 Always let the real YAML error through

**PR #23731**: (twangboy) Fixes #22959: Trying to add a directory to an unmapped drive in windows @ 2015-05-14T21:59:14Z
- ISSUE #22959: (highlyunavailable) Windows Salt hangs if file.directory is trying to write to a drive that doesn't exist
- 72cf360 Merge pull request #23731 from twangboy/fix_22959
- 88e5495 Fixes #22959: Trying to add a directory to an unmapped drive in windows

**PR #23730**: (rallytime) Backport #23729 to 2014.7 @ 2015-05-14T21:58:34Z
- PR #23729: (rallytime) Partially merge #23437 (grains fix) | refs: #23730
- PR #23437: (cedwards) Grains item patch | refs: #23729
- 2610195 Merge pull request #23730 from rallytime/bp-23729
- 1877cae adding support for nested grains to grains.item

**PR #23688**: (twangboy) Added inet_pton to utils/validate/net.py for ip.set_static_ip in windows @ 2015-05-14T16:15:56Z
- 3e9df88 Merge pull request #23688 from twangboy/fix_23415
- 6a91169 Fixed unused-import pylint error
- 5e25b3f fixed pylint errors
- 1a96766 Added inet_pton to utils/validate/net.py for ip.set_static_ip in windows

**PR #23680**: (cachedout) Rename kwarg in cloud runner @ 2015-05-13T19:44:02Z
- ISSUE #23403: (iamfil) salt.runners.cloud.action fun parameter is replaced | refs: #23680
- 1b86460 Merge pull request #23680 from cachedout/issue_23403
- d5986c2 Rename kwarg in cloud runner

**PR #23674**: (cachedout) Handle lists correctly in grains.list_present @ 2015-05-13T18:34:58Z
- ISSUE #23548: (kkaig) grains.list_present produces incorrect (?) output | refs: #23674
- cd64a0f Merge pull request #23674 from cachedout/issue_23548
- da8a2f5 Handle lists correctly in grains.list_present

**PR #23672**: (twangboy) Fix user present @ 2015-05-13T18:30:09Z
- d322a19 Merge pull request #23672 from twangboy/fix_user_present
- 731e7af Merge branch `2014.7` of https://github.com/saltstack/salt into fix_user_present
- d6f70a4 Fixed user.present to create password in windows

**PR #23670**: (rallytime) Backport #23607 to 2014.7 @ 2015-05-13T18:27:17Z
- ISSUE #23604: (Azidburn) service.dead on systemd Minion create an Error Message | refs: #23607
- PR #23607: (Azidburn) Fix for #23604. No error reporting. Exitcode !=0 are ok | refs: #23670
- 43f7025 Merge pull request #23670 from rallytime/bp-23607
- ed30d4c Fix for #23604. No error reporting. Exitcode !=0 are ok

**PR #23661**: (rallytime) Merge #23640 with whitespace fix @ 2015-05-13T15:47:30Z
- ISSUE #22141: (Deshke) grains.get_or_set_hash render error if hash begins with `\%' | refs: #23640
- PR #23640: (cachedout) Add warning to get_or_set_hash about reserved chars | refs: #23661
- 0f006ac Merge pull request #23661 from rallytime/merge-23640
- 4427f42 Whitespace fix
- dd91154 Add warning to get_or_set_hash about reserved chars
- PR #23639: (cachedout) Handle exceptions raised by __virtual__ @ 2015-05-13T15:11:12Z
  - ISSUE #23452: (michaelforge) minion crashed with empty grain | refs: #23639
  - 84e2ef8 Merge pull request #23639 from cachedout/issue_23452
  - d418b49 Syntax error!
  - 45b4015 Handle exceptions raised by __virtual__
- PR #23637: (cachedout) Convert str master to list @ 2015-05-13T15:08:19Z
  - ISSUE #23611: (hubez) master_type set to `failover' but `master' is not of type list but of type <type `str'> | refs: #23637
  - bd9b94b Merge pull request #23637 from cachedout/issue_23611
  - 56cb1f5 Fix typo
  - f6fcf19 Convert str master to list
- PR #23595: (rallytime) Backport #23549 to 2014.7 @ 2015-05-12T21:19:40Z
  - PR #23549: (vr-jack) Update __init__.py | refs: #23595
  - f20c0e4 Merge pull request #23595 from rallytime/bp-23549
  - 6efca0 Update __init__.py
- PR #23594: (rallytime) Backport #23442 to 2014.7 @ 2015-05-12T21:19:34Z
  - ISSUE #23110: (martinhoefling) Copying files from gitfs in file.recurse state fails
  - PR #23496: (martinhoefling) Fix for issue #23110 | refs: #23594
  - 1acaf86 Merge pull request #23594 from rallytime/bp-23496
  - d5ae1d2 Fix for issue #23110 This resolves issues when the freshly created directory is removed by file-server.update.
- PR #23593: (rallytime) Backport #23442 to 2014.7 @ 2015-05-12T21:19:26Z
  - PR #23442: (clan) add directory itself to keep list | refs: #23593
  - 2c221c7 Merge pull request #23593 from rallytime/bp-23442
  - 39869a1 check w/ low['name'] only
  - 304ce49 another fix for file defined w/ id, but require name
  - 8814d41 add directory itself to keep list
- PR #23606: (twangboy) Fixed checkbox for starting service and actually starting it @ 2015-05-12T21:18:50Z
  - fadd1ef Merge pull request #23606 from twangboy/fix_installer
  - 038331e Fixed checkbox for starting service and actually starting it
- PR #23592: (rallytime) Backport #23389 to 2014.7 @ 2015-05-12T16:44:42Z
  - ISSUE #22908: (karanjad) Add failhard option to salt orchestration | refs: #23389
• **PR #23573**: (techhat) Scan all available networks for public and private IPs | refs: #23802 @ 2015-05-12T15:22:22Z
  - cd34b9b Merge pull request #23573 from techhat/novaquery
  - f92db5e Linting
  - 26e00d3 Scan all available networks for public and private IPs

• **PR #23558**: (jfindlay) reorder emerge command line @ 2015-05-12T17:46Z
  - ISSUE #23479: (danielmorlock) Typos in `pkg_removed` for Gentoo? | refs: #23558
  - 2a72cd7 Merge pull request #23558 from jfindlay/fix_ebuild
  - 4540fb reorder emerge command line

• **PR #23530**: (dr4Ke) salt-ssh state: fix including all salt:// references @ 2015-05-12T15:13:43Z
  - ISSUE #23355: (dr4Ke) salt-ssh: `sources: salt://` files from `pkg` state are not included in salt_state.tgz | refs: #23530
  - a664a3c Merge pull request #23530 from dr4Ke/fix_salt_ssh_to_include_pkg_sources
  - 5df6a80 fix pylint warning
  - d0549e5 salt-ssh state: fix including all salt:// references

• **PR #23433**: (twangboy) Obtain all software from the registry @ 2015-05-11T22:47:52Z
  - ISSUE #23004: (b18) 2014.7.5 - Windows - pkg.list_pkgs - ``nxlog'' never shows up in output. | refs: #23433
  - 55ce3869 Merge pull request #23433 from twangboy/list_pkgs_fix
  - 8ab5b1b Fix pylint error
  - 2d11d65 Obtain all software from the registry

• **PR #23554**: (jleroy) Debian: Hostname always updated @ 2015-05-11T21:57:00Z
  - 755bed0 Merge pull request #23554 from jleroy/debian-hostname-fix
  - 5ff749e Debian: Hostname always updated

• **PR #23551**: (dr4Ke) grains.append unit tests, related to #23474 @ 2015-05-11T21:54:25Z
  - 6ee87ce Merge pull request #23551 from dr4Ke/grains.append_unit_tests
  - ebf9df fix pylint errors
  - c495404 unit tests for grains.append module function
  - 0c9a323 use MagickMock
  - c838a22 unit tests for grains.append module function

• **PR #23474**: (dr4Ke) Fix grains.append in nested dictionary grains #23411 @ 2015-05-11T18:00:21Z
  - ISSUE #23411: (dr4Ke) grains.append should work at any level of a grain | refs: #23440
  - PR #23440: (dr4Ke) fix grains.append in nested dictionary grains #23411 | refs: #23474
  - e965c5 Merge pull request #23474 from dr4Ke/fixed_grains.append_nested
- a01a5bb grains.get, parameter delimiter, versionadded: 2014.7.6
- b39f504 remove debugging output
- b6e15e2 fix grains.append in nested dictionary grains #23411

PR #23537: (t0rrant) Update changelog @ 2015-05-11T17:02:16Z
- ab7e1ae Merge pull request #23537 from t0rrant/patch-1
- 8e03ce9 Update changelog

PR #23538: (cro) Update date in LICENSE file @ 2015-05-11T15:19:25Z
- b79fed3 Merge pull request #23538 from cro/licupdate
- 345efe2 Update date in LICENSE file

PR #23505: (aneeshusa) Remove unused ssh config validator. Fixes #23159. @ 2015-05-09T13:24:15Z
- ISSUE #23159: (aneeshusa) Unused validator
  - a123a36 Merge pull request #23505 from aneeshusa/remove-unused-ssh-config-validator
  - 90af167 Remove unused ssh config validator. Fixes #23159.

PR #23467: (slinu3d) Added AWS v4 signature support @ 2015-05-08T14:36:19Z
- ISSUE #20518: (ekle) module s3.get does not support eu-central-1 | refs: #23467
  - ca2c21a Merge pull request #23467 from slinu3d/2014.7
  - 0b4081d Fixed pylint error at line 363
  - 5be5eb5 Fixed pylink errors
  - e64374 Fixed lint errors
  - b9d1ac4 Added AWS v4 signature support

PR #23444: (techhat) Add create_attach_volume to nova driver @ 2015-05-07T19:51:32Z
- e6f9e9c Merge pull request #23444 from techhat/novacreateattach
  - ebdb7ea Add create_attach_volume to nova driver

PR #23460: (s0undt3ch) [2014.7] Update to latest stable bootstrap script v2015.05.07 @ 2015-05-07T19:02:36Z
- ISSUE #563: (chutz) pidfile support for minion and master daemons | refs: #23460
  - e331463 Merge pull request #23460 from s0undt3ch/hotfix/bootstrap-script-2014.7
  - edcd0c4 Update to latest stable bootstrap script v2015.07

PR #23439: (techhat) Add wait_for_passwd_maxtries variable @ 2015-05-07T07:28:56Z
- 7a8ce1a Merge pull request #23439 from techhat/maxtries
  - 0ad3ff2 Add wait_for_passwd_maxtries variable

PR #23422: (cro) $HOME should not be used, some shells don't set it. @ 2015-05-06T21:02:36Z
- 644eb75 Merge pull request #23422 from cro/gce_sh_home
  - 4e9e6b Don't use $HOME to find user's directory, some shells don't set it

PR #23425: (basepi) [2014.7] Fix typo in FunctionWrapper @ 2015-05-06T20:38:03Z
- ef17ab4 Merge pull request #23425 from basepi/functionwrapper_typo
  - c390737 Fix typo in FunctionWrapper
• PR #23385: (rallytime) Backport #23346 to 2014.7 @ 2015-05-06T20:29Z
  - PR #23346: (ericfode) Allow file_map in salt-cloud to handle folders. | refs: #23385
  - 1b13ec0 Merge pull request #23385 from rallytime/bp-23346
  - 9efc13c more linting fixes
  - cf131c9 cleaned up some pylint errors
  - f981699 added logic to sftp_file and file_map to allow folder uploads using file_map

• PR #23414: (jfindlay) 2015.2 -> 2015.5 @ 2015-05-06T20:04:02Z
  - f8c7a62 Merge pull request #23414 from jfindlay/update_branch
  - 8074d16 2015.2 -> 2015.5

• PR #23404: (hvnsweeting) saltapi cherrypy: initialize var when POST body is empty @ 2015-05-06T17:35:56Z
  - 54b3bd4 Merge pull request #23404 from hvnsweeting/cherrypy-post-emptybody-fix
  - f85f8f9 initialize var when POST body is empty

• PR #23409: (terminalmage) Update Lithium docstrings in 2014.7 branch @ 2015-05-06T16:20:46Z
  - 160f703 Merge pull request #23409 from terminalmage/update-lithium-docstrings-2014.7
  - bc97d01 Fix sphinx typo
  - 20006b0 Update Lithium docstrings in 2014.7 branch

• PR #23397: (jfindlay) add more flexible whitespace to locale_gen search @ 2015-05-06T03:44:11Z
  - ISSUE #17245: (tomashavlas) localemod does not generate locale for Arch | refs: #23307 #23397
  - aa5b0a Merge pull request #23397 from jfindlay/fix.locale_gen
  - 0941bef add more flexible whitespace to locale_gen search

• PR #23368: (kaithar) Backport #23367 to 2014.7 @ 2015-05-05T21:42:26Z
  - PR #23367: (kaithar) Put the sed insert statement back in to the output. | refs: #23368
  - PR #18368: (basepi) Merge forward from 2014.7 to develop | refs: #23367 #23368
  - 0c76dd4 Merge pull request #23368 from kaithar/bp-23367
  - 577f419 Pylint fix
  - 8d9acdf Put the sed insert statement back in to the output.

• PR #23350: (lorengordon) Append/prepend: search for full line @ 2015-05-05T21:42:11Z
  - ISSUE #23294: (variia) file.replace fails to append if repl string partially available | refs: #23350
  - 3493cc1 Merge pull request #23350 from lorengordon/file.replace_assume_line
  - b60e224 Append/prepend: search for full line

• PR #23341: (cachedout) Fix syndic pid and logfile path @ 2015-05-05T21:29:10Z
  - ISSUE #23026: (adelcast) Incorrect salt-syndic logfile and pidfile locations | refs: #23341
  - 7be5c48 Merge pull request #23341 from cachedout/issue_23026
  - e98e65e Fix tests
  - 6011b43 Fix syndic pid and logfile path
- PR #23272: (basepi) [2014.7] Allow salt-ssh minion config overrides via master config and roster | refs: #23347 @ **
  - ISSUE #19114: (pykler) salt-ssh and gpg pillar renderer | refs: #23188 #23272 #23347
  - PR #23188: (basepi) [2014.7] Work around bug in salt-ssh in config.get for gpg renderer | refs: #23272
e61abf Merge pull request #23272 from basepi/salt-ssh.minion.config.19114
c22309 Add versionadded
e7407f Lint
c23375 Missing comma
8e3e80 Pass the minion_opts through the FunctionWrapper
cb69cd0 Match the master config template in the master config reference
87fc316 Add Salt-SSH section to master config template
91dd9dc Add ssh_minion_opts to master config ref
c273ea1 Add minion config to salt-ssh doc
a0b6b76 Add minion_opts to roster docs
5212c35 Accept minion_opts from the target information
e2099b6 Process ssh_minion_opts from master config
3b64214 Revert ”Work around bug in salt-ssh in config.get for gpg renderer”
49495a Remove the strip (embracing multi-line YAML dump)
fe87f0f Dump multi-line yaml into the SHIM
b751a72 Inject local minion config into shim if available
- PR #23347: (basepi) [2014.7] Salt-SSH Backport FunctionWrapper.__contains__ @ 2015-05-05T14:13:21Z
  - ISSUE #19114: (pykler) salt-ssh and gpg pillar renderer | refs: #23188 #23272 #23347
  - PR #23272: (basepi) [2014.7] Allow salt-ssh minion config overrides via master config and roster | refs: #23347

  4f760dd Merge pull request #23347 from basepi/salt-ssh.functionwrapper.contains.19114
  3059e3 Backport FunctionWrapper.__contains__
- PR #23344: (cachedout) Explicitly set file_client on master @ 2015-05-04T23:21:48Z
  - ISSUE #22742: (hvnsweeting) salt-master says: ”Is master address: `salt' was previously resolvable but now fails to resolve!” | refs: #23344
  02658b1 Merge pull request #23344 from cachedout/issue_22742
  5adc96c Explicitly set file_client on master
- PR #23318: (cellscape) Honor seed argument in LXC container initialization @ 2015-05-04T20:58:12Z
  - PR #23311: (cellscape) Fix new container initialization in LXC runner | refs: #23318
  ba7605d Merge pull request #23318 from cellscape/honor-seed-argument
  228b1be Honor seed argument in LXC container initialization
- PR #23307: (jfindlay) check for /etc/locale.gen @ 2015-05-04T20:56:32Z
- ISSUE #17245: (tomashavlas) localemod does not generate locale for Arch | refs: #23307 #23397
- 4ac4509 Merge pull request #23307 from jfindlay/fix.locale_gen
- 101199a check for /etc/locale.gen

- **PR #23324**: (s0undt3ch) [2014.7] Update to the latest stable release of the bootstrap script v2015.05.04 @ 2015-05-04T16:28:30Z
  - ISSUE #580: (thatch45) recursive watch not being caught | refs: #23324
  - ISSUE #552: (jhutchins) Support require and watch under the same state dec | refs: #23324
  - PR #589: (epoelke) add --quiet and --outfile options to saltkey | refs: #23324
  - PR #567: (bastichelaar) Added upstart module | refs: #23324
  - PR #560: (UtahDave) The runas feature that was added in 93423aa2e5e4b7de6452090b0039560d2b13... | refs: #23324
  - PR #504: (SEJeff) File state goodies | refs: #23324
  - 5487367 Merge pull request #23324 from s0undt3ch/hotfix/bootstrap-script-2014.7
  - 6643e47 Update to the latest stable release of the bootstrap script v2015.05.04

- **PR #23329**: (cro) Require requests to verify cert when talking to aliyun and proxmox cloud providers @ 2015-05-04T16:17Z
  - 5847367 Merge pull request #23329 from cro/cloud_verify_cert
  - 860d4b7 Turn on ssl verify for requests.

- **PR #23311**: (cellscape) Fix new container initialization in LXC runner | refs: #23318 @ 2015-05-04T09:55:29Z
  - ea20176 Merge pull request #23311 from cellscape/fix-salt-cloud-lxc-init
  - 76bb34 Fix new container initialization in LXC runner

- **PR #23298**: (chris-prince) Fixed issue #18880 in 2014.7 branch @ 2015-05-03T15:49:41Z
  - ISSUE #18880: (johtso) npm installed breaks when a module is missing
  - c399b8f Merge pull request #23298 from chris-prince/2014.7
  - 0fa25db Fixed issue #18880 in 2014.7 branch

- **PR #23292**: (rallytime) Merge #23151 with pylint fixes @ 2015-05-02T03:54:12Z
  - ISSUE #23148: (cr1st1p) virt - error handling bogus if machine image location is wrong
  - PR #23151: (cr1st1p) Fixes #23148 | refs: #23292
  - 16ecefd Merge pull request #23292 from rallytime/merge-23151
  - 8ff852a Merge #23151 with pylint fixes
  - 8ffa12e Fixes #23148

- **PR #23274**: (basepi) [2014.7] Reduce salt-ssh debug log verbosity @ 2015-05-01T20:19:25Z
  - ce24315 Merge pull request #23274 from basepi/salt-ssh.debug.verbosity
  - ece6c6 Log stdout and stderr to trace
  - 08f54d7 Log stdout and stderr to trace as well
  - 9b9c30f Reduce salt-ssh debug log verbosity

- **PR #23261**: (rallytime) Fix tornado websocket event handler registration @ 2015-05-01T18:20:31Z
- ISSUE #22605: (mavenAtHouzz) Tornado websockets event Handlers registration are incorrect | refs: #23261

- 7b55e43 Merge pull request #23261 from rallytime/fix-22605
- 4950bf8 Fix tornado websocket event handler registration

- PR #23258: (teizz) TCP keepalives on the ret side, Revisited. @ 2015-05-01T16:34:49Z
  - 83ef7cb Merge pull request #23258 from teizz/i>>ret_keepalive_2014_7_5
  - 0b9bf6e The fixes by i>>cachedout which were backported into 2015_2 were missing a single parameter thus not setting up the TCP keepalive for the ZeroMQ Channel by default.

- PR #23241: (techhat) Move iptables log options after the jump @ 2015-05-01T01:31:59Z
  - ISSUE #23224: (twellspring) iptables.append --log parameters must be after --jump LOG | refs: #23241
  - 8de3c83 Merge pull request #23241 from techhat/issue23224
  - 87f7648c Move iptables log options after the jump

- PR #23228: (rallytime) Backport #23171 to 2014.7 @ 2015-04-30T21:09:45Z
  - PR #23171: (skizunov) Bugfix: `clean_proc_dir` is broken | refs: #23228
  - 2015-04-30T21:00:00
  - f20210e Merge pull request #23228 from rallytime/bp-23171
  - 6e70e99 Bugfix: `clean_proc_dir` is broken

- PR #23227: (rallytime) Backport #22808 to 2014.7 @ 2015-04-30T21:09:14Z
  - ISSUE #22703: (Xiol) salt-ssh does not work with list matcher | refs: #22808
  - PR #22808: (basepi) [2015.2] Add list targeting to salt-ssh flat roster | refs: #23227
  - 721cc28 Merge pull request #23227 from rallytime/bp-22808
  - d208a00 Dict, not list
  - a3529e4 It's already been converted to a list
  - d257f2d Add list targeting to salt-ssh flat roster

- PR #22823: (hvnsweeting) 22822 file directory clean @ 2015-04-30T15:25:51Z
  - 82c2af Merge pull request #22823 from hvnsweeting/22822-file-directory-clean
  - d74c27f2 fix lint - remove unnecessary parenthesis
  - cb3dfef refactor
  - 89f24b5a refactor: use relpath instead of do it manually
  - d3060a5 refactor
  - 5759b0e bugfix: fix file.directory clean=True when it require parent dir

- PR #22977: (bersace) Fix fileserver backends __opts__ overwritten by _pillar @ 2015-04-30T15:24:56Z
  - ISSUE #22941: (bersace) _pillar func breaks fileserver globals | refs: #22977 #22942
  - PR #22942: (bersace) Fix fileserver backends global overwritten by _pillar | refs: #22977
  - 7f0078 Merge pull request #22977 from bersace/fix-fileserver-backends-pillar-side-effect
  - 5f451f6 Fix fileserver backends __opts__ overwritten by _pillar

- PR #23180: (jfindlay) fix typos from 36841bdd in masterapi.py @ 2015-04-30T15:22:41Z
- ISSUE #23166: (claudiupopescu) `Error in function _minion_event" resulting in modules not loaded | refs: #23180
- 34206f7 Merge pull request #23180 from jfindlay/remote_event
- 72066e1 fix typos from 36841bdd in masterapi.py

• PR #23176: (jfindlay) copy standard cmd.run* kwargs into cmd.run_chroot @ 2015-04-30T15:22:12Z
  - ISSUE #23153: (cr1st1p) cmdmod : run_chroot - broken in 2014.7.5 - missing kwargs | refs: #23176
  - b6b8216 Merge pull request #23176 from jfindlay/run_chroot
  - 7dc3417 copy standard cmd.run* kwargs into cmd.run_chroot

• PR #23193: (joejulian) supervisord.mod_watch should accept sfun @ 2015-04-30T04:34:21Z

  - d7979e Work around bug in salt-ssh in config.get for gpg renderer

• PR #23146: (rallytime) Backport #20779 to 2014.7 @ 2015-04-28T20:45:06Z
  - ISSUE #20647: (ryan-lane) file.serialize fails to serialize due to ordered dicts | refs: #20779
  - PR #20779: (cachedout) Use declared yaml options | refs: #23146
  - 3b53e04 Merge pull request #23146 from rallytime/bp-20779
  - 93c41af Stringify version number before lstrip

• PR #23145: (rallytime) Backport #23089 to 2014.7 @ 2015-04-28T20:44:56Z
  - ISSUE #16188: (drawks) salt.modules.parted has various functions with bogus input validation. | refs: #23124
  - PR #23089: (cachedout) Stringify version number before lstrip | refs: #23145
  - 8bb4664 Merge pull request #23089 from rallytime/bp-23089

• PR #23144: (rallytime) Backport #23124 to 2014.7 @ 2015-04-28T20:44:46Z
  - ISSUE #16188: (drawks) salt.modules.parted has various functions with bogus input validation. | refs: #23124
6b64da7 fix parsing the output of parted

• **PR #23120**: *(terminalmage)* Don’t run os.path.relpath() if repo doesn’t have a `''root''` param set @ 2015-04-28T15:46:54Z
  - a27b158 Merge pull request #23120 from terminalmage/fix-gifts-relpath
  - 1860ff Don’t run os.path.relpath() if repo doesn’t have a `''root''` param set

• **PR #23132**: *(clinta)* Backport b27c176 @ 2015-04-28T15:00:30Z
  - fcba607 Merge pull request #23132 from clinta/patch-2
  - a824d72 Backport b27c176

• **PR #23114**: *(rallytime)* Adjust ZeroMQ 4 docs to reflect changes to Ubuntu 12 packages @ 2015-04-28T15:00:30Z
  - ISSUE #18476: *(Auha)* Upgrading salt on my master caused dependency issues | refs: #23114 #18610
  - PR #18610: *(rallytime)* Make ZMQ 4 installation docs for ubuntu more clear | refs: #23114
  - b0f4b28 Merge pull request #23114 from rallytime/remove_ubuntu_zmq4_docs
  - f6cc7c8 Adjust ZeroMQ 4 docs to reflect changes to Ubuntu 12 packages

• **PR #23108**: *(rallytime)* Backport #23097 to 2014.7 @ 2015-04-28T03:58:05Z
  - ISSUE #23085: *(xenophonf)* Use `''s3fs''` (not `''s3'') in fileserver_roots | refs: #23097
  - PR #23097: *(rallytime)* Change s3 to s3fs in fileserver_roots docs example | refs: #23108
  - 399857f Merge pull request #23108 from rallytime/bp-23097
  - fa88984 Change s3 to s3fs in fileserver_roots docs example

• **PR #23112**: *(basepi)* [2014.7] Backport #22199 to fix mysql returner save_load errors @ 2015-04-28T03:55:44Z
  - ISSUE #22171: *(basepi)* We should only call returner.save_load once per jid | refs: #22199
  - PR #22199: *(basepi)* [2015.2] Put a bandaid on the save_load duplicate issue (mysql returner) | refs: #23112
  - 5541537 Merge pull request #23112 from basepi/mysql_returner_save_load
  - 0127012 Put a bandaid on the save_load duplicate issue

• **PR #23113**: *(rallytime)* Revert `''Backport #22895 to 2014.7''` @ 2015-04-28T03:27:29Z
  - PR #22925: *(rallytime)* Backport #22895 to 2014.7 | refs: #23113
  - PR #22895: *(aletourneau)* pam_tally counter was not reset to 0 after a succesfull login | refs: #22925
  - dfe2066 Merge pull request #23113 from saltstack/revert-22925-bp-22895
  - b957ea8 Revert `''Backport #22895 to 2014.7''`

• **PR #23094**: *(terminalmage)* pygit2: disable cleaning of stale refs for authenticated remotes @ 2015-04-27T20:51:28Z
  - ISSUE #23013: *(markusr815)* gifts regression with authenticated repos | refs: #23094
  - 215153f Merge pull request #23094 from terminalmage/issue23013
  - aaf7b04 pygit2: disable cleaning of stale refs for authenticated remotes

• **PR #23048**: *(jfindlay)* py-2.6 compat for utils/boto.py ElementTree exception @ 2015-04-25T16:56:45Z
  - d45aa21 Merge pull request #23048 from jfindlay/ET_error
  - 64c42cc py-2.6 compat for utils/boto.py ElementTree exception

• **PR #23025**: *(jfindlay)* catch exceptions on bad system locales/encodings @ 2015-04-25T16:56:30Z
- ISSUE #22981: (syphernl) Locale state throwing traceback when generating not (yet) existing locale | refs: #23025
  - d25a5c1 Merge pull request #23025 from jfindlay/fix_sys_locale
  - 9c4d62b catch exceptions on bad system locales/encodings

  • PR #22932: (hvnsweeting) bugfix: also manipulate dir_mode when source not defined @ 2015-04-25T16:54:58Z
    - 5e44b59 Merge pull request #22932 from hvnsweeting/file-append-bugfix
    - 3f368de do not use assert in execution module
    - 9d4f4a bugfix: also manipulate dir_mode when source not defined

  • PR #23055: (jfindlay) prevent ps module errors on accessing dead procs @ 2015-04-24T22:39:49Z
    - ISSUE #23021: (ether42) ps.pgrep raises NoSuchProcess | refs: #23055
    - c2416a4 Merge pull request #23055 from jfindlay/fix_ps
    - c2dc7ad prevent ps module errors on accessing dead procs

  • PR #23031: (jfindlay) convert exception e.message to just e @ 2015-04-24T18:38:13Z
    - bf9158 Merge pull request #23031 from jfindlay/exception
    - 856ad1 convert exception e.message to just e

  • PR #23015: (hvnsweeting) if status of service is stop, there is not an error with it @ 2015-04-24T14:35:10Z
    - 774f33 Merge pull request #23015 from hvnsweeting/set-non-error-lvl-for-service-status-log
    - 92ea163 if status of service is stop, there is not an error with it

  • PR #23000: (jfindlay) set systemd service killMode to process for minion @ 2015-04-24T03:42:39Z
    - ISSUE #22993: (jetpak) salt-minion restart causes all spawned daemons to die on centos7 (systemd) | refs: #23000
    - 2e09789 Merge pull request #23000 from jfindlay/systemd_kill
    - 3d575e2 set systemd service killMode to process for minion

  • PR #22999: (jtand) Added retry_dns to minion doc. @ 2015-04-24T03:30:24Z
    - ISSUE #22707: (arthurlogilab) retry_dns of master configuration is missing from the documentation | refs: #22999
    - b5e095a Merge pull request #22999 from jtand/fix_22707
    - 8486e17 Added retry_dns to minion doc.

  • PR #22990: (techhat) Use the proper cloud conf variable @ 2015-04-23T17:48:07Z
    - 27dc877 Merge pull request #22990 from techhat/2014.7
    - d33bc86 Use the proper cloud conf variable

  • PR #22976: (multani) Improve state_output documentation @ 2015-04-23T12:24:22Z
    - 13dff65 Merge pull request #22976 from multani/state-output-doc
    - 19ef441 Improve state_output documentation

  • PR #22955: (terminalmage) Fix regression introduced yesterday in dockerio module @ 2015-04-22T18:56:39Z
    - 89fa185 Merge pull request #22955 from terminalmage/dockerio-run-fix
    - b4472ad Fix regression introduced yesterday in dockerio module
• PR #22954: (rallytime) Backport #22909 to 2014.7 @ 2015-04-22T18:56:20Z
  - PR #22909: (mguegan) Fix compatibility with pkgin > 0.7 | refs: #22954
  - 46ef227 Merge pull request #22954 from rallytime/bp-22909
  - 70c1c3d Fix compatibility with pkgin > 0.7

• PR #22856: (jfindlay) increase timeout and decrease tries for route53 records @ 2015-04-22T16:47:01Z
  - ISSUE #18720: (Reiner030) timeouts when setting Route53 records | refs: #22856
  - c9ae593 Merge pull request #22856 from jfindlay/route53_timeout
  - ba4a786 add route53 record sync wait, default=False
  - ea2fd50 increase timeout and tries for route53 records

• PR #22946: (s0undt3ch) Test with a more recent pip version to avoid a traceback @ 2015-04-22T16:25:17Z
  - a178d44 Merge pull request #22946 from s0undt3ch/2014.7
  - bc87749 Test with a more recent pip version to avoid a traceback

• PR #22945: (garethgreenaway) Fixes to scheduler @ 2015-04-22T16:25:00Z
  - ISSUE #22571: (BoomerB) same error message as on issue #18504 | refs: #22945
  - de339be Merge pull request #22945 from garethgreenaway/22571_2014_7_schedule_pillar_refresh_seconds_exceptions
  - bfa6d25 Fixing a reported issue when using a scheduled job from pillar with splay. _seconds element that acted as a backup of the actual seconds was being removed when pillar was refreshed and causing exceptions. This fix moves some splay related code out of the if else condition so it's checked whether the job is in the job queue or not.

• PR #22887: (hvnsweeting) fix #18843 @ 2015-04-22T15:47:05Z
  - ISSUE #18843: (calvinhp) State user.present will fail to create home if user exists and homedir doesn't
  - 12d2b91 Merge pull request #22887 from hvnsweeting/18843-fix-user-present-home
  - 7fe7b08 run user.chhome once to avoid any side-effect when run it twice
  - 19de995 clarify the usage of home arg
  - d6dc09a enhance doc, as usermod on ubuntu 12.04 will not CREATE home
  - 0ce4d7f refactor: force to use boolean
  - 849d19e log debug the creating dir process
  - c4e95b9 fix #18843: usermod won't create a dir if old home does not exist

• PR #22930: (jfindlay) localemod.gen_locale now always returns a boolean @ 2015-04-22T15:37:39Z
  - ISSUE #21140: (holms) locale.present state executed successfully, although originally fails | refs: #22930 #22829
  - ISSUE #2417: (ffa) Module standards | refs: #22829
  - PR #22829: (F30) Always return a boolean in gen_locale() | refs: #22930
  - bd47d7bd Merge pull request #22930 from jfindlay/localegen_bool
  - 399999f localemod.gen_locale now always returns a boolean

• PR #22933: (hvnsweeting) add test for #18843 @ 2015-04-22T15:27:18Z
  - ISSUE #18843: (calvinhp) State user.present will fail to create home if user exists and homedir doesn't
- 11bcf14 Merge pull request #22933 from hvnsweeting/18843-test
- b13db32 add test for #18843

- **PR #22925**: (rallytime) Backport #22895 to 2014.7 | refs: #23113 @ 2015-04-22T02:30:26Z
  - **PR #22895**: (aletourneau) pam_tally counter was not reset to 0 after a successful login | refs: #22925
  - 6890752 Merge pull request #22925 from rallytime.bp-22895
  - 3852d96 Pylint fix
  - 90f7829 Fixed pylint issues
  - 5ebf159 Cleaned up pull request
  - a08ac47 pam_tally counter was not reset to 0 after a successful login

- **PR #22914**: (cachedout) Call proper returner function in jobs.list_jobs @ 2015-04-22T00:49:01Z
  - **ISSUE #22790**: (whiteinge) jobs.list_jobs runner tracebacks on `missing` argument | refs: #22914
  - eca37eb Merge pull request #22914 from cachedout/issue_22790
  - d828d6f Call proper returner function in jobs.list_jobs

- **PR #22918**: (JaseFace) Add a note to the git_pillar docs stating that GitPython is the only currently supported provider @ 2015-04-22T00:48:26Z
  - 44f3409 Merge pull request #22918 from JaseFace/git-pillar-provider-doc-note
  - 0aee5c2 Add a note to the git_pillar docs stating that GitPython is the only currently supported provider

- **PR #22907**: (techhat) Properly merge cloud configs to create profiles @ 2015-04-21T22:02:44Z
  - 31c461f Merge pull request #22907 from techhat/cloudconfig
  - 3bf4e66 Properly merge cloud configs to create profiles

- **PR #22894**: (0xf10e) Fix issue #22782 @ 2015-04-21T18:55:18Z
  - f093975 Merge pull request #22894 from 0xf10e/2014.7
  - 58fa24c Clarify doc on kwarg `roles` for user_present().
  - f0ae26b Improve readability by renaming tenant_role

- **PR #22902**: (rallytime) Change state example to use proper kwarg @ 2015-04-21T31:04:33Z
  - **ISSUE #12003**: (MarkusMuellerAU) [state.dockerio] docker.run TypeError: run() argument after ** must be a mapping, not str | refs: #22902
  - c802ba7 Merge pull request #22902 from rallytime/docker_doc_fix
  - 8f70346 Change state example to use proper kwarg

- **PR #22898**: (terminalmage) dockerio: better error message for native exec driver @ 2015-04-21T18:02:58Z
  - 81771a7 Merge pull request #22898 from terminalmage/issue12003
  - c375309 dockerio: better error message for native exec driver

- **PR #22897**: (rallytime) Add param documentation for file.replace state @ 2015-04-21T17:31:04Z
  - **ISSUE #22825**: (paolodina) Issue using file.replace in state file | refs: #22897
  - e2ec47c Merge pull request #22897 from rallytime/fix-22825
  - 9c51630 Add param documentation for file.replace state

- **PR #22850**: (bersace) Fix pillar and salt fileserver mixed @ 2015-04-21T17:04:33Z
• **PR #22818**: (twangboy) Added documentation regarding pip in windows @ 2015-04-21T03:58:59Z
  
  - 1380fec Merge pull request #22818 from twangboy/upd_pip_docs
  - cb999c7 Update pip.py
  - 3cc5c97 Added documentation regarding pip in windows

• **PR #22872**: (rallytime) Prevent stacktrace on os.path.exists in hosts module @ 2015-04-21T02:54:40Z
  
  - b2bf17f Merge pull request #22872 from rallytime/fixed_hosts_stacktrace
  - c88a1ea Prevent stacktrace on os.path.exists in hosts module

• **PR #22853**: (s0undt3ch) Don't assume package installation order. @ 2015-04-21T02:42:41Z
  
  - 03af523 Merge pull request #22853 from s0undt3ch/2014.7
  - b62df62 Don't assume package installation order.

• **PR #22877**: (s0undt3ch) Don't fail on make clean just because the directory does not exist @ 2015-04-21T02:40:47Z
  
  - 9211e36 Merge pull request #22877 from s0undt3ch/hotfix/clean-docs-fix
  - 95d6887 Don't fail on make clean just because the directory does not exist

• **PR #22873**: (thatch45) Type check the version since it will often be numeric @ 2015-04-21T02:38:11Z
  
  - 5b6bd08 Merge pull request #22873 from thatch45/type_check
  - 53b8376 Type check the version since it will often be numeric

• **PR #22870**: (twangboy) Added ability to send a version with a space in it @ 2015-04-20T23:18:28Z
  
  - c965b0a Merge pull request #22870 from twangboy/fix_installer_again
  - 3f180cf Added ability to send a version with a space in it

• **PR #22863**: (rallytime) Backport #20974 to 2014.7 @ 2015-04-20T19:29:37Z
  
  - **PR #20974**: (JohannesEbke) Fix expr_match usage in salt.utils.check_whitelist_blacklist | refs: #22863
    
    - 2973eb1 Merge pull request #22863 from rallytime/bp-20974
    - 14913a4 Fix expr_match usage in salt.utils.check_whitelist_blacklist

• **PR #22578**: (hvnsweeting) gracefully handle when salt-minion cannot decrypt key @ 2015-04-20T15:24:45Z
  
  - c45b92b Merge pull request #22578 from hvnsweeting/2014-7-fix-compile-pillar
  - f75b24a gracefully handle when salt-minion cannot decrypt key

• **PR #22800**: (terminalmage) Improve error logging for pygit2 SSH-based remotes @ 2015-04-18T17:18:55Z
  
  - **ISSUE #21979**: (yrdevops) gitfs: error message not descriptive enough when libgit2 was compiled without libssh2 | refs: #22800
    
    - 900c7a5 Merge pull request #22800 from terminalmage/issue21979
    - 8f1c008 Clarify that for pygit2, receiving 0 objects means repo is up-to-date
    - 98885f7 Add information about libssh2 requirement for pygit2 ssh auth
- 09468d2 Fix incorrect log message
- 2093b08 Adjust loglevels for gitfs errors
- 9d394df Improve error logging for pygit2 SSH-based remotes

**PR #22813:** (twangboy) Updated instructions for building salt @ 2015-04-18T04:10:07Z
- e99f2fd Merge pull request #22813 from twangboy/win_doc_fix
- ade421a Fixed some formatting issues
- 8901b3b Updated instructions for building salt

**PR #22810:** (basepi) [2014.7] More msgpack gating for salt-ssh @ 2015-04-17T22:28:24Z
- ISSUE #22708: (Bilge) salt-ssh file.accumulated error: NameError: global name `msgpack` is not defined | refs: #22810
- fe1de89 Merge pull request #22810 from basepi/salt-ssh.more.msgpack.gating
- d4da8e6 Gate msgpack in salt/modules/saltutil.py
- 02303b2 Gate msgpack in salt/modules/data.py
- d7e8741 Gate salt.states.file.py msgpack

**PR #22803:** (rallytime) Allow map file to work with softlayer @ 2015-04-17T20:34:42Z
- ISSUE #17144: (xpender) salt-cloud -m fails with softlayer | refs: #22803
- 11df71e Merge pull request #22803 from rallytime/fixed-17144
- ce886a6 Allow map file to work with softlayer

**PR #22807:** (rallytime) Add 2014.7.5 links to windows installation docs @ 2015-04-17T20:32:13Z
- cd43a95 Merge pull request #22807 from rallytime/windows_docs_update
- 5931a58 Replace all 4s with 5s
- eadaeed Add 2014.7.5 links to windows installation docs

**PR #22795:** (rallytime) Added release note for 2014.7.5 release @ 2015-04-17T18:05:36Z
- 0b295e2 Merge pull request #22795 from rallytime/release_notes
- fde1fee Remove extra line
- b19b95d Added release note for 2014.7.5 release

**PR #22759:** (twangboy) Final edits to the batch files for running salt @ 2015-04-17T04:31:15Z
- ISSUE #22740: (lorenagordon) New Windows installer assumes salt is installed to the current directory | refs: #22759
- PR #22754: (twangboy) Removed redundant " and " | refs: #22759
- 3c91459 Merge pull request #22759 from twangboy/fix_bat_one_last_time
- 075f82e Final edits to the batch files for running salt

**PR #22760:** (thatch45) Fix issues with the syndic @ 2015-04-17T04:30:48Z
- 20d3f2b Merge pull request #22760 from thatch45/syndic_fix
- e2db624 Fix issues with the syndic not resolving the master when the interface is set

**PR #22762:** (twangboy) Fixed version not showing in Add/Remove Programs @ 2015-04-17T04:29:46Z
- 54c4584 Merge pull request #22762 from twangboy/fix_installer
37.2.32 Salt 2014.7.8 Release Notes

Changes for v2014.7.7..v2014.7.8

Extended changelog courtesy of Todd Stansell (https://github.com/tjstansell/salt-changelogs):

Statistics:

- Total Merges: 7
- Total Issue references: 3
- Total PR references: 10

Changes:

- PR #28839: (cachedout) Revert #28740 @ 2015-11-12T22:54:28Z
  - PR #28740: (MasterNayru) Add missing S3 module import | refs: #28777
  - 4b8bdd0 Merge pull request #28839 from cachedout/revert_28740
  - 215b26c Revert #28740

- PR #28777: (rallytime) Back-port #28740 to 2014.7 @ 2015-11-11T18:00:00Z
  - PR #28740: (MasterNayru) Add missing S3 module import | refs: #28777
  - 76e69b4 Merge pull request #28777 from rallytime/bp-28740-2014.7
  - da5fac2 Back-port #28740 to 2014.7

- PR #28716: (rallytime) Back-port #28705 to 2014.7 @ 2015-11-10T15:03Z
  - PR #28705: (cachedout) Account for new headers class in tornado 4.3 | refs: #28716
  - 45c73eb Merge pull request #28716 from rallytime/bp-28705
  - 32e7bd3 Account for new headers class in tornado 4.3

- PR #28717: (cachedout) Add note about recommended umask @ 2015-11-09T23:26:20Z
  - ISSUE #28199: (felskrone) Non-standard umasks might break the master | refs: #28717
  - f4fe921 Merge pull request #28717 from cachedout/umask_note
  - 1874300 Add note about recommended umask

- PR #28461: (cachedout) Wrap all cache calls in state.sls in correct umask @ 2015-11-02T17:11:02Z
  - ISSUE #28455: (zmalone) highstate.cache is world readable, and contains secrets | refs: #28461
  - 4bf56ca Merge pull request #28461 from cachedout/issue_28455
  - 097838e Wrap all cache calls in state.sls in correct umask

- PR #28407: (DmitryKuzmenko) Don't request creds if auth with key. @ 2015-10-29T16:12:30Z
  - ISSUE #24910: (boeig) -T, --make-token flag does NOT work- LDAP Groups | refs: #28407
  - f3e61db Merge pull request #28407 from DSRCompany/issues/24910_token_auth_fix_2014
  - b7b5bec Don't request creds if auth with key.
• **PR #27390**: (JaseFace) Ensure we pass on the enable setting if present, or use the default of True if not in build_schedule_item() @ 2015-10-05T18:09:33Z
  - d284eb1 Merge pull request #27390 from JaseFace/schedule-missing-enabled
  - 563db71 Ensure we pass on the enable setting if present, or use the default of True if not in build_schedule_item() Prior to this, when schedule.present compares the existing schedule to the one crafted by this function, enabled will actually be removed at each run. schedule.present sees a modification needs to be made, and invokes schedule.modify, which does so with enabled: True, creating and endless loop of an 'enabled' removal and addition.

### 37.2.33 Salt 2014.7.9 Release Notes

**Changes for v2014.7.8..v2014.7.9**

Extended changelog courtesy of Todd Stansell ([https://github.com/tjstansell/salt-changelogs](https://github.com/tjstansell/salt-changelogs)):

*Generated at: 2016-03-11T20:58:58Z*

  - 85aa70a Merge pull request #29392 from jacobhammons/2014.7
  - d7f0db1 updated version number to not reference a specific build from the latest branch

- **PR #29296**: (douardda) Use process KillMode on Debian systems also @ 2015-12-01T16:00:16Z
  - ISSUE #29295: (douardda) systemd's service file should use the `process' KillMode option on Debian also | refs: #29296
  - d2fb210 Merge pull request #29296 from douardda/patch-3
  - d288539 Use process KillMode on Debian systems also

### 37.2.34 Salt 2014.1.0 Release Notes - Codename Hydrogen

**Note:** Due to a change in master to minion communication, 2014.1.0 minions are not compatible with older-version masters. Please upgrade masters first. More info on backwards-compatibility policy [here](#), under the "Upgrading Salt" subheading.

**Note:** A change in the grammar in the state compiler makes `module.run` in requisites illegal syntax. Its use is replaced simply with the word `module`. In other words you will need to change requisites like this:

### 37.2. Previous Releases
This is a breaking change. We apologize for the inconvenience, we needed to do this to remove some ambiguity in parsing requisites.

**release** 2014-02-24

The 2014.1.0 release of Salt is a major release which not only increases stability but also brings new capabilities in virtualization, cloud integration, and more. This release brings a great focus on the expansion of testing making roughly double the coverage in the Salt tests, and comes with many new features.

2014.1.0 is the first release to follow the new date-based release naming system. See the version numbers page for more details.

**Major Features**

**Salt Cloud Merged into Salt**

Salt Cloud is a tool for provisioning salted minions across various cloud providers. Prior to this release, Salt Cloud was a separate project but this marks its full integration with the Salt distribution. A Getting Started guide and additional documentation for Salt Cloud can be found [here](#).

**Google Compute Engine**

Alongside Salt Cloud comes new support for the Google Compute Engine. Salt Stack can now deploy and control GCE virtual machines and the application stacks that they run.

For more information on Salt Stack and GCE, please see [this blog post](#).

Documentation for Salt and GCE can be found [here](#).

**Salt Virt**

Salt Virt is a cloud controller that supports virtual machine deployment, inspection, migration, and integration with many aspects of Salt.

Salt Virt has undergone a major overhaul with this release and now supports many more features and includes a number of critical improvements.

**Docker Integration**

Salt now ships with `states` and an `execution module` to manage Docker containers.
Substantial Testing Expansion

Salt continues to increase its unit/regression test coverage. This release includes over 300 new tests.

BSD Package Management

BSD package management has been entirely rewritten. FreeBSD 9 and older now default to using pkg_add, while FreeBSD 10 and newer will use pkgng. FreeBSD 9 can be forced to use pkgng, however, by specifying the following option in the minion config file:

```
providers:
  pkg: pkgng
```

In addition, support for installing software from the ports tree has been added. See the documentation for the ports state and execution module for more information.

Network Management for Debian/Ubuntu

Initial support for management of network interfaces on Debian-based distros has been added. See the documentation for the network state and the debian_ip for more information.

IPv6 Support for iptables State/Module

The iptables state and module now have IPv6 support. A new parameter family has been added to the states and execution functions, to distinguish between IPv4 and IPv6. The default value for this parameter is ipv4, specifying ipv6 will use ip6tables to manage firewall rules.

GitFS Improvements

Several performance improvements have been made to the Git fileserver backend. Additionally, file states can now use any any SHA1 commit hash as a fileserver environment:

```
/etc/httpd/httpd.conf:
  file.managed:
    - source: salt://webserver/files/httpd.conf
    - saltenv: 45af879
```

This applies to the functions in the cp module as well:

```
salt '*' cp.get_file salt://readme.txt /tmp/readme.txt saltenv=45af879
```

MinionFS

This new fileserver backend allows files which have been pushed from the minion to the master (using cp.push) to be served up from the salt fileserver. The path for these files takes the following format:

```
salt://minion-id/path/to/file
```
minion-id is the id of the `source` minion, the one from which the files were pushed to the master. 
/path/to/file is the full path of the file.

The MinionFS Walkthrough contains a more thorough example of how to use this backend.

**saltenv**

To distinguish between fileserver environments and execution functions which deal with environment variables, file-server environments are now specified using the saltenv parameter. env will continue to work, but is deprecated and will be removed in a future release.

**Grains Caching**

A caching layer has been added to the Grains system, which can help speed up minion startup. Disabled by default, it can be enabled by setting the minion config option grains_cache:

```
grains_cache: True  
# Seconds before grains cache is considered to be stale.  
grains_cache_expiration: 300  
```

If set to True, the grains loader will read from/write to a msgpack-serialized file containing the grains data. Additional command-line parameters have been added to salt-call, mainly for testing purposes:

- `--skip-grains` will completely bypass the grains loader when salt-call is invoked.
- `--refresh-grains-cache` will force the grains loader to bypass the grains cache and refresh the grains, writing a new grains cache file.

**Improved Command Logging Control**

When using the cmd module, either on the CLI or when developing Salt execution modules, a new keyword argument output_loglevel allows for greater control over how (or even if) the command and its output are logged. For example:

```
salt '*' cmd.run 'tail /var/log/messages' output_loglevel=debug  
```

The package management modules (apt, yum/pkg, etc.) have been updated to log the copious output generated from these commands at loglevel debug.

*Note:* To keep a command from being logged, output_loglevel=quiet can be used.

Prior to this release, this could be done using quiet=True. This argument is still supported, but will be removed in a future Salt release.

**PagerDuty Support**

Initial support for firing events via PagerDuty has been added. See the documentation for the pagerduty module.
Virtual Terminal

Sometimes the subprocess module is not good enough, and, in fact, not even askpass is. This virtual terminal is still in its infant childhood, needs quite some love, and was originally created to replace askpass, but, while developing it, it immediately proved that it could do so much more. It's currently used by salt-cloud when bootstrapping salt on clouds which require the use of a password.

Proxy Minions

Initial basic support for Proxy Minions is in this release. Documentation can be found here.

Proxy minions are a developing feature in Salt that enables control of devices that cannot run a minion. Examples include network gear like switches and routers that run a proprietary OS but offer an API, or “dumb” devices that just don't have the horsepower or ability to handle a Python VM.

Proxy minions can be difficult to write, so a simple REST-based example proxy is included. A Python bottle-based webserver can be found at https://github.com/cro/salt-proxy-rest as an endpoint for this proxy.

This is an ALPHA-quality feature. There are a number of issues with it currently, mostly centering around process control, logging, and inability to work in a masterless configuration.

Additional Bugfixes (Release Candidate Period)

Below are many of the fixes that were implemented in salt during the release candidate phase.

- Fix mount.mounted leaving conflicting entries in fstab (issue 7079)
- Fix mysql returner serialization to use json (issue 9590)
- Fix ZMQError: Operation cannot be accomplished in current state errors (issue 6306)
- Rbenv and ruby improvements
- Fix quoting issues with mysql port (issue 9568)
- Update mount module/state to support multiple swap partitions (issue 9520)
- Fix archive state to work with bsdtar
- Clarify logs for minion ID caching
- Add numeric revision support to git state (issue 9718)
- Update master_uri with master_ip (issue 9694)
- Add comment to Debian mod_repo (issue 9923)
- Fix potential undefined loop variable in rabbitmq state (issue 8703)
- Fix for salt-virt runner to delete key on VM deletion
- Fix for salt-run -d to limit results to specific runner or function (issue 9975)
- Add tracebacks to jinja renderer when applicable (issue 10010)
- Fix parsing in monit module (issue 10041)
- Fix highstate output from syndic minions (issue 9732)
- Quiet logging when dealing with passwords/hashes (issue 10000)
- Fix for multiple remotes in git_pillar (issue 9932)
• Fix npm installed command (issue 10109)
• Add safeguards for utf8 errors in zcbuildout module
• Fix compound commands (issue 9746)
• Add systemd notification when master is started
• Many doc improvements

37.2.35 Salt 2014.1.1 Release Notes

release 2014-03-18

Version 2014.1.1 is a bugfix release for 2014.1.0. The changes include:

• Various doc fixes, including up-to-date Salt Cloud installation documentation.
• Renamed state.sls runner to state.orchestrate, to reduce confusion with the state.sls execution function
• Fix various bugs in the dig module (issue 10367)
• Add retry for query on certain EC2 status codes (issue 10154)
• Fix various bugs in mongodb_user state module (issue 10430)
• Fix permissions on ~/.salt_token (issue 10422)
• Add PyObjects support
• Fix launchctl module crash with missing files
• Fix saltutil.find_job for Windows (issue 10581)
• Fix OS detection for OpenSolaris (issue 10601)
• Fix broken salt-ssh key_deploy
• Add support for multiline cron comments (issue 10721)
• Fix timezone module for Arch (issue 10789)
• Fix symlink support for file.recurse (issue 10809)
• Fix multi-master bugs (issue 10732 and issue 10969)
• Fix file.patch to error when source file is unavailable (issue 10380)
• Fix pkg to handle packages set as purge in pkg.installed (issue 10719)
• Add zmqversion grain
• Fix highstate summary for masterless minions (issue 10945)
• Fix saltutil.find_job for 2014.1 masters talking to 0.17 minions (issue 11020)
• Fix file.recurse states with trailing slashes in source (issue 11002)
• Fix pkg states to allow pkgname.x86_64 (issue 7306)
• Make iptables states set a default table for flush (issue 11037)
• Added iptables --reject-with after final iptables call in iptables states (issue:10757)
• Fix improper passing of “family” in iptables states (issue 10774)
• Fix traceback in iptables.insert states (issue 10988)
• Fix zombie processes (issue 10867 and others)
• Fix batch mode to obey --return settings (issue 9146)
• Fix localclient issue that was causing batch mode breakage (issue 11094, issue 10470, and others)
• Multiple salt-ssh fixes
• FreeBSD: look in /usr/local/etc/salt for configuration by default, if installed using pip --editable.
• Add a skip_suggestions parameter to pkg.installed states which allows pre-flight check to be skipped (issue 11106)
• Fixed tag-based gitfs fileserver environments regression (issue 10956)
• Yum: fix cache of available pkgs not cleared when repos are changed (issue 11001)
• Yum: fix for plugin-provided repositories (i.e. RHN/Spacewalk) (issue 11145)
• Fix regression in chocolatey.bootstrap (issue 10541)
• Fix fail on unknown target in jobs runner (issue 11151)
• Don’t log errors for commands which are expected to sometimes exit with non-zero exit status (issue 11154, issue 11090)
• Fix test=True CLI override of config option (issue 10877)
• Log sysctl key listing at loglevel TRACE (issue 10931)

37.2.36 Salt 2014.1.10 Release Notes

release 2014-08-01

Note: Version 2014.1.9 contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. This version contains the version detection fix, but is otherwise identical to 2014.1.9.

Version 2014.1.10 is another bugfix release for 2014.1.0. Changes include:
• Ensure salt-ssh will not continue if permissions on a temporary directory are not correct.
• Use the bootstrap script distributed with Salt instead of relying on an external resource
• Remove unused testing code
• Ensure salt states are placed into the .salt directory in salt-ssh
• Use a randomized path for temporary files in a salt-cloud deployment
• Clean any stale directories to ensure a fresh copy of salt-ssh during a deployment

Salt 2014.1.10 fixes security issues documented by CVE-2014-3563: ```Insecure tmp-file creation in seed.py, salt-ssh, and salt-cloud.''' Upgrading is recommended.

37.2.37 Salt 2014.1.11 Release Notes

release 2014-08-29

Version 2014.1.11 is another bugfix release for 2014.1.0. Changes include:
• Fix for minion_id with byte-order mark (BOM) (issue 12296)
• Fix runas deprecation in at module
• Fix trailing slash behavior for file.makedirs_ (issue 14019)
• Fix chocolatey path (issue 13870)
• Fix git_pillar infinite loop issues (issue 14671)
• Fix json outputter null case
• Fix for minion error if one of multiple masters are down (issue 14099)

37.2.38 Salt 2014.1.12 Release Notes

release 2014-10-08
Version 2014.1.12 is another bugfix release for 2014.1.0. Changes include:
• Fix scp_file always failing (which broke salt-cloud) (issue 16437)
• Fix regression in pillar in masterless (issue 16210, issue 16416, issue 16428)

37.2.39 Salt 2014.1.13 Release Notes

release 2014-10-14
Version 2014.1.13 is another bugfix release for 2014.1.0. Changes include:
• Fix sftp_file by checking the exit status code of scp (which broke salt-cloud) (issue 16599)

37.2.40 Salt 2014.1.2 Release Notes

release 2014-04-15
Version 2014.1.2 is another bugfix release for 2014.1.0. The changes include:
• Fix username detection when su'ed to root on FreeBSD (issue 11628)
• Fix minionfs backend for file.recurse states
• Fix 32-bit packages of different arches than the CPU arch, on 32-bit RHEL/CentOS (issue 11822)
• Fix bug with specifying alternate home dir on user creation (FreeBSD) (issue 11790)
• Don’t reload site module on module refresh for MacOS
• Fix regression with running execution functions in Pillar SLS (issue 11453)
• Fix some modules missing from Windows installer
• Don’t log an error for yum commands that return nonzero exit status on non-failure (issue 11645)
• Fix bug in rabbitmq state (issue 8703)
• Fix missing ssh config options (issue 10604)
• Fix top.sls ordering (issue 10810 and issue 11691)
• Fix salt-key --list all (issue 10982)
• Fix win_servermanager install/remove function (issue 11038)
• Fix interaction with tokens when running commands as root (issue 11223)
• Fix overstate bug with find_job and **kwargs (issue 10503)
• Fix saltenv for aptpkg.mod_repo from pkgrepo state
- Fix environment issue causing file caching problems (issue 11189)
- Fix bug in __parse_key in registry state (issue 11408)
- Add minion auth retry on rejection (issue 10763)
- Fix publish_session updating the encryption key (issue 11493)
- Fix for bad AssertionError raised by GitPython (issue 11473)
- Fix debian_ip to allow disabling and enabling networking on Ubuntu (issue 11164)
- Fix potential memory leak caused by saved (and unused) events (issue 11582)
- Fix exception handling in the MySQL module (issue 11616)
- Fix environment-related error (issue 11534)
- Include psutil on Windows
- Add file.replace and file.search to Windows (issue 11471)
- Add additional file module helpers to Windows (issue 11235)
- Add pid to netstat output on Windows (issue 10782)
- Fix Windows not caching new versions of installers in winrepo (issue 10597)
- Fix hardcoded md5 hashing
- Fix kwargs in salt-ssh (issue 11609)
- Fix file backup timestamps (issue 11745)
- Fix stacktrace on sys.doc with invalid eauth (issue 11293)
- Fix git.latest with test=True (issue 11595)
- Fix file.check_perms hardcoded follow_symlinks (issue 11387)
- Fix certain pkg states for RHEL5/Cent5 machines (issue 11719)

37.2.41 Salt 2014.1.3 Release Notes

release 2014-04-15

Version 2014.1.3 is another bugfix release for 2014.1.0. It was created as a hotfix for a regression found in 2014.1.2, which was not distributed. The only change made was as follows:

- Fix regression that caused saltutil.find_job to fail, causing premature terminations of salt CLI commands.

Changes in the not-distributed 2014.1.2, also included in 2014.1.3:

- Fix username detection when su’ed to root on FreeBSD (issue 11628)
- Fix minionfs backend for file.recurse states
- Fix 32-bit packages of different arches than the CPU arch, on 32-bit RHEL/CentOS (issue 11822)
- Fix bug with specifying alternate home dir on user creation (FreeBSD) (issue 11790)
- Don’t reload site module on module refresh for MacOS
- Fix regression with running execution functions in Pillar SLS (issue 11453)
- Fix some modules missing from Windows installer
- Don’t log an error for yum commands that return nonzero exit status on non-failure (issue 11645)
• Fix bug in rabbitmq state (issue 8703)
• Fix missing ssh config options (issue 10604)
• Fix top.sls ordering (issue 10810 and issue 11691)
• Fix salt-key --list all (issue 10982)
• Fix win_servermanager install/remove function (issue 11038)
• Fix interaction with tokens when running commands as root (issue 11223)
• Fix overstate bug with find_job and **kwargs (issue 10503)
• Fix saltenv for aptpkg.mod_repo from pkgrepo state
• Fix environment issue causing file caching problems (issue 11189)
• Fix bug in __parse_key in registry state (issue 11408)
• Add minion auth retry on rejection (issue 10763)
• Fix publish_session updating the encryption key (issue 11493)
• Fix for bad AssertionError raised by GitPython (issue 11473)
• Fix debian_ip to allow disabling and enabling networking on Ubuntu (issue 11164)
• Fix potential memory leak caused by saved (and unused) events (issue 11582)
• Fix exception handling in the MySQL module (issue 11616)
• Fix environment-related error (issue 11534)
• Include psutil on Windows
• Add file.replace and file.search to Windows (issue 11471)
• Add additional file module helpers to Windows (issue 11235)
• Add pid to netstat output on Windows (issue 10782)
• Fix Windows not caching new versions of installers in winrepo (issue 10597)
• Fix hardcoded md5 hashing
• Fix kwargs in salt-ssh (issue 11609)
• Fix file backup timestamps (issue 11745)
• Fix stacktrace on sys.doc with invalid eauth (issue 11293)
• Fix git.latest with test=True (issue 11595)
• Fix file.check_perms hardcoded follow_symlinks (issue 11387)
• Fix certain pkg states for RHEL5/Cent5 machines (issue 11719)

37.2.42 Salt 2014.1.4 Release Notes

release 2014-05-05

Version 2014.1.4 is another bugfix release for 2014.1.0. Changes include:
• Fix setup.py dependency issue (issue 12031)
• Fix handling for IOErrors under certain circumstances (issue 11783 and issue 11853)
• Fix fatal exception when /proc/1/cgroup is not readable (issue 11619)
• Fix os grains for OpenSolaris (issue 11907)
• Fix lvs.zero module argument pass-through (issue 9001)
• Fix bug in debian_ip interaction with network.system state (issue 11164)
• Remove bad binary package verification code (issue 12177)
• Fix traceback in solaris package installation (issue 12237)
• Fix file.directory state symlink handling (issue 12209)
• Remove external_ip grain
• Fix file.managed makedirs issues (issue 10446)
• Fix hang on non-existent Windows drive letter for file module (issue 9880)
• Fix salt minion caching all users on the server (issue 9743)
• Add strftime formatting for ps.boot_time (issue 12428)

37.2.43 Salt 2014.1.5 Release Notes

release 2014-06-11

Version 2014.1.5 is another bugfix release for 2014.1.0. Changes include:

• Add function for finding cached job on the minion
• Fix iptables save file location for Debian (issue 11730)
• Fix for minion caching jobs when master is down
• Bump default syndic_wait to 5 to fix syndic-related problems (issue 12262)
• Add OpenBSD, FreeBSD, and NetBSD support for network.netstat (issue 12121)
• Fix false positive error in logs for makeconf state (issue 9762)
• Fix for yum fromrepo package installs when repo is disabled by default (issue 12466)
• Fix for extra blank lines in file.blockreplace (issue 12422)
• Fix grain detection for OpenVZ guests (issue 11877)
• Fix get_dns_servers function for Windows win_dns_client
• Use system locale for ports package installations
• Use correct stop/restart procedure for Debian networking in debian_ip (issue 12614)
• Fix for cmd_iter/cmd_iter_no_block blocking issues (issue 12617)
• Fix traceback when syncing custom types (issue 12883)
• Fix cleaning directory symlinks in file.directory
• Add performance optimizations for saltutil.sync_all and state.highstate
• Fix possible error in saltutil.running
• Fix for kmod modules with dashes (issue 13239)
• Fix possible race condition for Windows minions in state module reloading (issue 12370)
• Fix bug with roster for passwd option that is loaded as a non-string object (issue 13249)
• Keep duplicate version numbers from showing up in pkg.list_pkgs output
• Fixes for Jinja renderer, timezone module/state (issue 12724)
• Fix timedatectl parsing for systemd>=210 (issue 12728)
• Fix saltenv being written to YUM repo config files (issue 12887)
• Removed the deprecated external nodes classifier (originally accessible by setting a value for external_nodes in the master configuration file). Note that this functionality has been marked deprecated for some time and was replaced by the more general master_tops system.
• More robust escaping of ldap filter strings.
• Fix trailing slash in gitfs_root causing files not to be available (issue 13185)

37.2.44 Salt 2014.1.6 Release Notes

release 2014-07-08

Version 2014.1.6 is another bugfix release for 2014.1.0. Changes include:

• Fix extra iptables --help output (Sorry!) (issue 13648, issue 13507, issue 13527, issue 13607)
• Fix mount.active for Solaris
• Fix support for allow-hotplug statement in debian_ip network module
• Add sqlite3 to esky builds
• Fix jobs.active output (issue 9526)
• Fix the virtual grain for Xen (issue 13534)
• Fix _ext_nodes unavailable on master (issue 13535)
• Fix eauth for batch mode (issue 9605)
• Fix force-related issues with tomcat support (issue 12889)
• Fix KeyError when cloud mapping
• Fix salt-minion restart loop in Windows (issue 12086)
• Fix detection of service virtual module on Fedora minions
• Fix traceback with missing ipv4 grain (issue 13838)
• Fix issue in roots backend with invalid data in mtime_map (issue 13836)
• Fix traceback in jobs.active (issue 11151)
• Fix master_tops and _ext_nodes issue (issue 13535, issue 13673)

37.2.45 Salt 2014.1.7 Release Notes

release 2014-07-09

Version 2014.1.7 is another bugfix release for 2014.1.0. Changes include:

• Fix batch mode regression (issue 14046)

This release was a hotfix release for the regression listed above which was present in the 2014.1.6 release. The changes included in 2014.1.6 are listed below:

• Fix extra iptables --help output (Sorry!) (issue 13648, issue 13507, issue 13527, issue 13607)
• Fix mount.active for Solaris
• Fix support for `allow-hotplug` statement in `debian_ip` network module
• Add `sqlite3` to `esky` builds
• Fix `jobs.active` output (issue 9526)
• Fix the `virtual` grain for Xen (issue 13534)
• Fix `eauth` for batch mode (issue 9605)
• Fix force-related issues with `tomcat` support (issue 12889)
• Fix `KeyError` when cloud mapping
• Fix `salt-minion` restart loop in Windows (issue 12086)
• Fix detection of `service` virtual module on Fedora minions
• Fix traceback with missing `ipv4` grain (issue 13838)
• Fix issue in `roots` backend with invalid data in `mtime_map` (issue 13836)
• Fix traceback in `jobs.active` (issue 11151)
• Fix `master_tops` and `_ext_nodes` issue (issue 13535, issue 13673)

37.2.46 Salt 2014.1.8 Release Notes

release 2014-07-30

Note: This release contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. Please use version 2014.1.10 instead.

Version 2014.1.8 is another bugfix release for 2014.1.0. Changes include:
• Ensure `salt-ssh` will not continue if permissions on a temporary directory are not correct.
• Use the bootstrap script distributed with Salt instead of relying on an external resource
• Remove unused testing code
• Ensure `salt states` are placed into the `.salt` directory in `salt-ssh`
• Use a randomized path for temporary files in a salt-cloud deployment
• Clean any stale directories to ensure a fresh copy of `salt-ssh` during a deployment

37.2.47 Salt 2014.1.9 Release Notes

release 2014-07-31

Note: This release contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. Please use version 2014.1.10 instead.

Note: Version 2014.1.8 contained a regression which caused inaccurate Salt version detection, and thus was never packaged for general release. This version contains the version detection fix, but is otherwise identical to 2014.1.8.

Version 2014.1.9 is another bugfix release for 2014.1.0. Changes include:
• Ensure salt-ssh will not continue if permissions on a temporary directory are not correct.
• Use the bootstrap script distributed with Salt instead of relying on an external resource
• Remove unused testing code
• Ensure salt states are placed into the .salt directory in salt-ssh
• Use a randomized path for temporary files in a salt-cloud deployment
• Clean any stale directories to ensure a fresh copy of salt-ssh during a deployment

37.2.48 Salt 0.10.0 Release Notes

release 2012-06-16

0.10.0 has arrived! This release comes with MANY bug fixes, and new capabilities which greatly enhance performance and reliability. This release is primarily a bug fix release with many new tests and many repaired bugs. This release also introduces a few new key features which were brought in primarily to repair bugs and some limitations found in some of the components of the original architecture.

Major Features

Event System

The Salt Master now comes equipped with a new event system. This event system has replaced some of the back end of the Salt client and offers the beginning of a system which will make plugging external applications into Salt. The event system relies on a local ZeroMQ publish socket and other processes can connect to this socket and listen for events. The new events can be easily managed via Salt’s event library.

Unprivileged User Updates

Some enhancements have been added to Salt for running as a user other than root. These new additions should make switching the user that the Salt Master is running as very painless, simply change the user option in the master configuration and restart the master, Salt will take care of all of the particulars for you.

Peer Runner Execution

Salt has long had the peer communication system used to allow minions to send commands via the salt master. 0.10.0 adds a new capability here, now the master can be configured to allow for minions to execute Salt runners via the peer_run option in the salt master configuration.

YAML Parsing Updates

In the past the YAML parser for sls files would return the incorrect numbers when the file mode was set with a preceding 0. The YAML parser used in Salt has been modified to no longer convert these number into octal but to keep them as the correct value so that sls files can be a little cleaner to write.

State Call Data Files

It was requested that the minion keep a local cache of the most recent executed state run. This has been added and now with state runs the data is stored in a msgpack file in the minion’s cachedir.
Turning Off the Job Cache

A new option has been added to the master configuration file. In previous releases the Salt client would look over the Salt job cache to read in the minion return data. With the addition of the event system the Salt client can now watch for events directly from the master worker processes.

This means that the job cache is no longer a hard requirement. Keep in mind though, that turning off the job cache means that historic job execution data cannot be retrieved.

Test Updates

Minion Swarms Are Faster

To continue our efforts with testing Salt’s ability to scale the minionswarm script has been updated. The minion-swarm can now start up minions much faster than it could before and comes with a new feature allowing modules to be disabled, thus lowering the minion’s footprint when making a swarm. These new updates have allows us to test

```
# python minionswarm.py -m 20 --master salt-master
```

Many Fixes

To get a good idea for the number of bugfixes this release offers take a look at the closed tickets for 0.10.0, this is a very substantial update:

https://github.com/saltstack/salt/issues?milestone=12&state=closed

Master and Minion Stability Fixes

As Salt deployments grow new ways to break Salt are discovered. 0.10.0 comes with a number of fixes for the minions and master greatly improving Salt stability.

37.2.49 Salt 0.10.1 Release Notes

release 2012-06-19

37.2.50 Salt 0.10.2 Release Notes

release 2012-07-30

0.10.2 is out! This release comes with enhancements to the pillar interface, cleaner ways to access the salt-call capabilities in the API, minion data caching and the event system has been added to salt minions.

There have also been updates to the ZeroMQ functions, many more tests (thanks to sponsors, the code sprint and many contributors) and a swath of bug fixes.
Major Features

Ext Pillar Modules

The ranks of available Salt modules directories sees a new member in 0.10.2. With the popularity of pillar a higher demand has arisen for ext_pillar interfaces to be more like regular Salt module additions. Now ext_pillar interfaces can be added in the same way as other modules, just drop it into the pillar directory in the salt source.

Minion Events

In 0.10.0 an event system was added to the Salt master. 0.10.2 adds the event system to the minions as well. Now event can be published on a local minion as well.

The minions can also send events back up to the master. This means that Salt is able to communicate individual events from the minions back up to the Master which are not associated with command.

Minion Data Caching

When pillar was introduced the landscape for available data was greatly enhanced. The minion’s began sending grain data back to the master on a regular basis.

The new config option on the master called minion_data_cache instructs the Salt master to maintain a cache of the minion's grains and pillar data in the cachedir. This option is turned off by default to avoid hitting the disk more, but when enabled the cache is used to make grain matching from the salt command more powerful, since the minions that will match can be predetermined.

Backup Files

By default all files replaced by the file.managed and file.recurse states we simply deleted. 0.10.2 adds a new option. By setting the backup option to minion the files are backed up before they are replaced.

The backed up files are located in the cachedir under the file_backup directory. On a default system this will be at: /var/cache/salt/file_backup

Configuration files

salt-master and salt-minion automatically load additional configuration files from master.d/*.conf respective minion.d/*.conf where master.d/minion.d is a directory in the same directory as the main configuration file.

Salt Key Verification

A number of users complained that they had inadvertently deleted the wrong salt authentication keys. 0.10.2 now displays what keys are going to be deleted and verifies that they are the keys that are intended for deletion.

Key auto-signing

If autosign_file is specified in the configuration file incoming keys will be compared to the list of keynames in autosign_file. Regular expressions as well as globbing is supported.
The file must only be writable by the user otherwise the file will be ignored. To relax the permission and allow group write access set the `permissive_pki_access` option.

**Module changes**

**Improved OpenBSD support**

New modules for managing services and packages were provided by Joshua Elsasser to further improve the support for OpenBSD.

Existing modules like the `disk` module were also improved to support OpenBSD.

**SQL Modules**

The MySQL and PostgreSQL modules have both received a number of additions thanks to the work of Avi Marcus and Roman Imankulov.

**ZFS Support on FreeBSD**

A new ZFS module has been added by Kurtis Velarde for FreeBSD supporting various ZFS operations like creating, extending or removing zpools.

**Augeas**

A new Augeas module by Ulrich Dangel for editing and verifying config files.

**Native Debian Service module**

The support for the Debian was further improved with an new service module for Debian by Ahmad Khayyat supporting `disable` and `enable`.

**Cassandra**

Cassandra support has been added by Adam Garside. Currently only status and diagnostic information are supported.

**Networking**

The networking support for RHEL has been improved and supports bonding support as well as zeroconf configuration.

**Monit**

Basic monit support by Kurtis Velarde to control services via monit.
nzbget

Basic support for controlling nzbget by Joseph Hall

Bluetooth

Basic bluez support for managing and controlling Bluetooth devices. Supports scanning as well as pairing/unpairing by Joseph Hall.

Test Updates

Consistency Testing

Another testing script has been added. A bug was found in pillar when many minions generated pillar data at the same time. The new consist.py script is the tests directory was created to reproduce bugs where data should always be consistent.

Many Fixes

To get a good idea for the number of bugfixes this release offers take a look at the closed tickets for 0.10.2, this is a very substantial update:

https://github.com/saltstack/salt/issues?milestone=24&page=1&state=closed

Master and Minion Stability Fixes

As Salt deployments grow new ways to break Salt are discovered. 0.10.2 comes with a number of fixes for the minions and master greatly improving Salt stability.

37.2.51 Salt 0.10.3 Release Notes

release 2012-09-30

The latest taste of Salt has come, this release has many fixes and feature additions. Modifications have been made to make ZeroMQ connections more reliable, the beginning of the ACL system is in place, a new command line parsing system has been added, dynamic module distribution has become more environment aware, the new master_finger option and many more!

Major Features

ACL System

The new ACL system has been introduced. The ACL system allows for system users other than root to execute salt commands. Users can be allowed to execute specific commands in the same way that minions are opened up to the peer system.

The configuration value to open up the ACL system is called client_acl and is configured like so:
```yaml
client_acl:
  fred:
    - test.*
    - pkg.list_pkgs
```

Where `fred` is allowed access to functions in the test module and to the `pkg.list_pkgs` function.

**Master Finger Option**

The `master_finger` option has been added to improve the security of minion provisioning. The `master_finger` option allows for the fingerprint of the master public key to be set in the configuration file to double verify that the master is valid. This option was added in response to a motivation to pre-authenticate the master when provisioning new minions to help prevent man in the middle attacks in some situations.

**Salt Key Fingerprint Generation**

The ability to generate fingerprints of keys used by Salt has been added to `salt-key`. The new option `finger` accepts the name of the key to generate and display a fingerprint for.

```
salt-key -F master
```

Will display the fingerprints for the master public and private keys.

**Parsing System**

Pedro Algavio, aka s0undt3ch, has added a substantial update to the command line parsing system that makes the help message output much cleaner and easier to search through. Salt parsers now have `--versions-report` besides usual `--version` info which you can provide when reporting any issues found.

**Key Generation**

We have reduced the requirements needed for `salt-key` to generate minion keys. You’re no longer required to have salt configured and it’s common directories created just to generate keys. This might prove useful if you’re batch creating keys to pre-load on minions.

**Startup States**

A few configuration options have been added which allow for states to be run when the minion daemon starts. This can be a great advantage when deploying with Salt because the minion can apply states right when it first runs. To use startup states set the `startup_states` configuration option on the minion to `highstate`.

**New Exclude Declaration**

Some users have asked about adding the ability to ensure that other sls files or ids are excluded from a state run. The exclude statement will delete all of the data loaded from the specified sls file or will delete the specified id:
Max Open Files

While we're currently unable to properly handle ZeroMQ's abort signals when the max open files is reached, due to the way that's handled on ZeroMQ's, we have minimized the chances of this happening without at least warning the user.

More State Output Options

Some major changes have been made to the state output system. In the past state return data was printed in a very verbose fashion and only states that failed or made changes were printed by default. Now two options can be passed to the master and minion configuration files to change the behavior of the state output. State output can be set to verbose (default) or non-verbose with the `state_verbose` option:

```yaml
state_verbose: False
```

It is noteworthy that the `state_verbose` option used to be set to `False` by default but has been changed to `True` by default in 0.10.3 due to many requests for the change.

The next option to be aware of new and called `state_output`. This option allows for the state output to be set to `full` (default) or `terse`.

The `full` output is the standard state output, but the new `terse` output will print only one line per state making the output much easier to follow when executing a large state system.

```yaml
state_output: terse
```

state.file.append Improvements

The salt state `file.append()` tries not to append existing text. Previously the matching check was being made line by line. While this kind of check might be enough for most cases, if the text being appended was multi-line, the check would not work properly. This issue is now properly handled, the match is done as a whole ignoring any white space addition or removal except inside commas. For those thinking that, in order to properly match over multiple lines, salt will load the whole file into memory, that’s not true. For most cases this is not important but an erroneous order to read a 4GB file, if not properly handled, like salt does, could make salt chew that amount of memory. Salt has a buffered file reader which will keep in memory a maximum of 256KB and iterates over the file in chunks of 32KB to test for the match, more than enough, if not, explain your usage on a ticket. With this change, also `salt.modules.file.contains()`, `salt.modules.file.contains_regex()`, `salt.modules.file.contains_glob()` and `salt.utils.find` now do the searching and/or matching using the buffered chunks approach explained above.

Two new keyword arguments were also added, `mkdirs`, and `source`. The first, `mkdirs` will create the necessary directories in order to append to the specified file, of course, it only applies if we're trying to append to a non-existing file on a non-existing directory:

```
/tmp/salttest/file-append-makedirs:
  file.append:
    text: foo
    makedirs: True
```
The second, `source`, allows one to append the contents of a file instead of specifying the text.

```bash
/tmp/salttest/file-append-source:
file.append:
  - source: salt://testfile
```

**Security Fix**

A timing vulnerability was uncovered in the code which decrypts the AES messages sent over the network. This has been fixed and upgrading is strongly recommended.

### 37.2.52 Salt 0.10.4 Release Notes

**release** 2012-10-23

Salt 0.10.4 is a monumental release for the Salt team, with two new module systems, many additions to allow granular access to Salt, improved platform support and much more.

This release is also exciting because we have been able to shorten the release cycle back to under a month. We are working hard to keep up the aggressive pace and look forward to having releases happen more frequently!

This release also includes a serious security fix and all users are very strongly recommended to upgrade. As usual, upgrade the master first, and then the minion to ensure that the process is smooth.

**Major Features**

**External Authentication System**

The new external authentication system allows for Salt to pass through authentication to any authentication system to determine if a user has permission to execute a Salt command. The Unix PAM system is the first supported system with more to come!

The external authentication system allows for specific users to be granted access to execute specific functions on specific minions. Access is configured in the master configuration file, and uses the new access control system:

```yaml
external_auth:
  pam:
    thatch:
      - 'web*':
        - test.*
        - network.*
```

The configuration above allows the user `thatch` to execute functions in the test and network modules on minions that match the `web*` target.

**Access Control System**

All Salt systems can now be configured to grant access to non-administrative users in a granular way. The old configuration continues to work. Specific functions can be opened up to specific minions from specific users in the case of external auth and client ACLs, and for specific minions in the case of the peer system.

Access controls are configured like this:
client_acl:
  fred:
    - web\*:
      - pkg.list_pkgs
      - test.*
      - apache.*

Target by Network

A new matcher has been added to the system which allows for minions to be targeted by network. This new matcher can be called with the `-S` flag on the command line and is available in all places that the matcher system is available. Using it is simple:

```
$ salt -S '192.168.1.0/24' test.ping
$ salt -S '192.168.1.100' test.ping
```

Nodegroup Nesting

Previously a nodegroup was limited by not being able to include another nodegroup, this restraint has been lifted and now nodegroups will be expanded within other nodegroups with the `N@` classifier.

Salt Key Delete by Glob

The ability to delete minion keys by glob has been added to `salt-key`. To delete all minion keys whose minion name starts with `web`:

```
$ salt-key -d 'web*'
```

Master Tops System

The `external_nodes` system has been upgraded to allow for modular subsystems to be used to generate the top file data for a highstate run.

The `external_nodes` option still works but will be deprecated in the future in favor of the new `master_tops` option. Example of using `master_tops`:

```
master_tops:
  ext_nodes: cobbler-external-nodes
```

Next Level Solaris Support

A lot of work has been put into improved Solaris support by Romeo Theriault. Packaging modules (pkgadd/pkgrm and pkgtutil) and states, cron support and user and group management have all been added and improved upon. These additions along with SMF (Service Management Facility) service support and improved Solaris grain detection in 0.10.3 add up to Salt becoming a great tool to manage Solaris servers with.
Security

A vulnerability in the security handshake was found and has been repaired, old minions should be able to connect to a new master, so as usual, the master should be updated first and then the minions.

Pillar Updates

The pillar communication has been updated to add some extra levels of verification so that the intended minion is the only one allowed to gather the data. Once all minions and the master are updated to salt 0.10.4 please activate pillar 2 by changing the pillar_version in the master config to 2. This will be set to 2 by default in a future release.

37.2.53 Salt 0.10.5 Release Notes

release 2012-11-15

Salt 0.10.5 is ready, and comes with some great new features. A few more interfaces have been modularized, like the outputter system. The job cache system has been made more powerful and can now store and retrieve jobs archived in external databases. The returner system has been extended to allow minions to easily retrieve data from a returner interface.

As usual, this is an exciting release, with many noteworthy additions!

Major Features

External Job Cache

The external job cache is a system which allows for a returner interface to also act as a job cache. This system is intended to allow users to store job information in a central location for longer periods of time and to make the act of looking up information from jobs executed on other minions easier.

Currently the external job cache is supported via the mongo and redis returners:

```yaml
ext_job_cache: redis
redis.host: salt
```

Once the external job cache is turned on the new ret module can be used on the minions to retrieve return information from the job cache. This can be a great way for minions to respond and react to other minions.

OpenStack Additions

OpenStack integration with Salt has been moving forward at a blistering pace. The new nova, glance, and keystone modules represent the beginning of ongoing OpenStack integration.

The Salt team has had many conversations with core OpenStack developers and is working on linking to OpenStack in powerful new ways.

Wheel System

A new API was added to the Salt Master which allows the master to be managed via an external API. This new system allows Salt API to easily hook into the Salt Master and manage configs, modify the state tree, manage the pillar and
more. The main motivation for the wheel system is to enable features needed in the upcoming web UI so users can manage the master just as easily as they manage minions.

The wheel system has also been hooked into the external auth system. This allows specific users to have granular access to manage components of the Salt Master.

**Render Pipes**

Jack Kuan has added a substantial new feature. The render pipes system allows Salt to treat the render system like unix pipes. This new system enables sls files to be passed through specific render engines. While the default renderer is still recommended, different engines can now be more easily merged. So to pipe the output of Mako used in YAML use this shebang line:

```
#!/mako|yaml
```

**Salt Key Overhaul**

The Salt Key system was originally developed as only a CLI interface, but as time went on it was pressed into becoming a clumsy API. This release marks a complete overhaul of Salt Key. Salt Key has been rewritten to function purely from an API and to use the outputter system. The benefit here is that the outputter system works much more cleanly with Salt Key now, and the internals of Salt Key can be used much more cleanly.

**Modular Outputters**

The outputter system is now loaded in a modular way. This means that output systems can be more easily added by dropping a python file down on the master that contains the function `output`.

**Gzip from Fileserver**

Gzip compression has been added as an option to the cp.get_file and cp.get_dir commands. This will make file transfers more efficient and faster, especially over slower network links.

**Unified Module Configuration**

In past releases of Salt, the minions needed to be configured for certain modules to function. This was difficult because it required pre-configuring the minions. 0.10.5 changes this by making all module configs on minions search the master config file for values.

Now if a single database server is needed, then it can be defined in the master config and all minions will become aware of the configuration value.

**Salt Call Enhancements**

The `salt-call` command has been updated in a few ways. Now, `salt-call` can take the `--return` option to send the data to a returner. Also, `salt-call` now reports executions in the minion proc system, this allows the master to be aware of the operation `salt-call` is running.
Death to pub_refresh and sub_timeout

The old configuration values pub_refresh and sub_timeout have been removed. These options were in place to alleviate problems found in earlier versions of ZeroMQ which have since been fixed. The continued use of these options has proven to cause problems with message passing and have been completely removed.

Git Revision Versions

When running Salt directly from git (for testing or development, of course) it has been difficult to know exactly what code is being executed. The new versioning system will detect the git revision when building and how many commits have been made since the last release. A release from git will look like this:

0.10.4-736-gec74d69

Svn Module Addition

Anthony Cornehl (twinshadow) contributed a module that adds Subversion support to Salt. This great addition helps round out Salt’s VCS support.

Noteworthy Changes

Arch Linux Defaults to Systemd

Arch Linux recently changed to use systemd by default and discontinued support for init scripts. Salt has followed suit and defaults to systemd now for managing services in Arch.

Salt, Salt Cloud and Openstack

With the releases of Salt 0.10.5 and Salt Cloud 0.8.2, OpenStack becomes the first (non-OS) piece of software to include support both on the user level (with Salt Cloud) and the admin level (with Salt). We are excited to continue to extend support of other platforms at this level.

37.2.54 Salt 0.11.0 Release Notes

release 2012-12-14

Salt 0.11.0 is here, with some highly sought after and exciting features. These features include the new overstate system, the reactor system, a new state run scope component called __context__, the beginning of the search system (still needs a great deal of work), multiple package states, the MySQL returner and a better system to arbitrarily reference outpuers.

It is also noteworthy that we are changing how we mark release numbers. For the life of the project we have been pushing every release with features and fixes as point releases. We will now be releasing point releases for only bug fixes on a more regular basis and major feature releases on a slightly less regular basis. This means that the next release will be a bugfix only release with a version number of 0.11.1. The next feature release will be named 0.12.0 and will mark the end of life for the 0.11 series.
Major Features

OverState

The overstate system is a simple way to manage rolling state executions across many minions. The overstate allows for a state to depend on the successful completion of another state.

Reactor System

The new reactor system allows for a reactive logic engine to be created which can respond to events within a salted environment. The reactor system uses sls files to match events fired on the master with actions, enabling Salt to react to problems in an infrastructure.

Your load-balanced group of webservers is under extra load? Spin up a new VM and add it to the group. Your fileserver is filling up? Send a notification to your sysadmin on call. The possibilities are endless!

Module Context

A new component has been added to the module loader system. The module context is a data structure that can hold objects for a given scope within the module.

This allows for components that are initialized to be stored in a persistent context which can greatly speed up ongoing connections. Right now the best example can be found in the cp execution module.

Multiple Package Management

A long desired feature has been added to package management. By definition Salt States have always installed packages one at a time. On most platforms this is not the fastest way to install packages. Erik Johnson, aka terminalmage, has modified the package modules for many providers and added new capabilities to install groups of packages. These package groups can be defined as a list of packages available in repository servers:

```
python_pkgs:
    pkg.installed:
        - pkgs:
            - python-mako
            - whoosh
            - python-git
```

or specify based on the location of specific packages:

```
python_pkgs:
    pkg.installed:
        - sources:
            - python-mako: http://some-rpms.org/python-mako.rpm
            - whoosh: salt://whoosh/whoosh.rpm
            - python-git: ftp://companyserver.net/python-git.rpm
```

Search System

The bones to the search system have been added. This is a very basic interface that allows for search backends to be added as search modules. The first supported search module is the whoosh search backend. Right now only the
basic paths for the search system are in place, making this very experimental. Further development will involve improving the search routines and index routines for whoosh and other search backends.

The search system has been made to allow for searching through all of the state and pillar files, configuration files and all return data from minion executions.

Notable Changes

All previous versions of Salt have shared many directories between the master and minion. The default locations for keys, cached data and sockets has been shared by master and minion. This has created serious problems with running a master and a minion on the same systems. 0.11.0 changes the defaults to be separate directories. Salt will also attempt to migrate all of the old key data into the correct new directories, but if it is not successful it may need to be done manually. If your keys exhibit issues after updating make sure that they have been moved from /etc/salt/pki to /etc/salt/pki/{master,minion}.

The old setup will look like this:

```
/etc/salt/pki
|-- master.pem
|-- master.pub
|-- minions
   |-- ragnarok.saltstack.net
   |-- minions_pre
   | `-- minion.pem
   | `-- minion.pub
   | `-- minion_master.pub
   `-- minions_rejected
```

With the accepted minion keys in /etc/salt/pki/minions, the new setup places the accepted minion keys in /etc/salt/pki/master/minions.

```
/etc/salt/pki
|-- master
    |-- master.pem
    |-- master.pub
    `-- minions
        |-- ragnarok.saltstack.net
        `-- minions_rejected
|-- minion
    |-- minion.pem
    |-- minion.pub
    `-- minion_master.pub
```

37.2.55 Salt 0.11.1 Release Notes

    release 2012-12-19

37.2.56 Salt 0.12.0 Release Notes

    release 2013-01-15
Another feature release of Salt is here! Some exciting additions are included with more ways to make salt modular and even easier management of the salt file server.

**Major Features**

**Modular Fileserver Backend**

The new modular fileserver backend allows for any external system to be used as a salt file server. The main benefit here is that it is now possible to tell the master to directly use a git remote location, or many git remote locations, automatically mapping git branches and tags to salt environments.

**Windows is First Class!**

A new Salt Windows installer is now available! Much work has been put in to improve Windows support. With this much easier method of getting Salt on your Windows machines, we hope even more development and progress will occur. Please file bug reports on the Salt GitHub repo issue tracker so we can continue improving.

One thing that is missing on Windows that Salt uses extensively is a software package manager and a software package repository. The Salt pkg state allows sys admins to install software across their infrastructure and across operating systems. Software on Windows can now be managed in the same way. The SaltStack team built a package manager that interfaces with the standard Salt pkg module to allow for installing and removing software on Windows. In addition, a software package repository has been built on top of the Salt files server. A small YAML file provides the information necessary for the package manager to install and remove software.

An interesting feature of the new Salt Windows software package repository is that one or more remote git repositories can supplement the master’s local repository. The repository can point to software on the master's files server or on an HTTP, HTTPS, or ftp server.

**New Default Outputer**

Salt displays data to the terminal via the outpower system. For a long time the default outpower for Salt has been the python pretty print library. While this has been a generally reasonable outpower, it did have many failings. The new default outpower is called `nested`, it recursively scans return data structures and prints them out cleanly.

If the result of the new nested outpower is not desired any other outpower can be used via the --out option, or the output option can be set in the master and minion configs to change the default outpower.

**Internal Scheduler**

The internal Salt scheduler is a new capability which allows for functions to be executed at given intervals on the minion, and for runners to be executed at given intervals on the master. The scheduler allows for sequences such as executing state runs (locally on the minion or remotely via an overstate) or continually gathering system data to be run at given intervals.

The configuration is simple, add the schedule option to the master or minion config and specify jobs to run, this in the master config will execute the state.over runner every 60 minutes:

```
schedule:
  overstate:
    function: state.over
    minutes: 60
```
This example for the minion configuration will execute a highstate every 30 minutes:

```
schedule:
  highstate:
    function: state.highstate
    minutes: 30
```

Optional DSL for SLS Formulas

Jack Kuan, our renderer expert, has created something that is astonishing. Salt, now comes with an optional Python based DSL, this is a very powerful interface that makes writing SLS files in pure python easier than it was with the raw py renderer. As usual this can be used with the renderer shebang line, so a single sls can be written with the DSL if pure python power is needed while keeping other sls files simple with YAML.

Set Grains Remotely

A new execution function and state module have been added that allows for grains to be set on the minion. Now grains can be set via a remote execution or via states. Use the `grains.present` state or the `grains.setval` execution functions.

Gentoo Additions

Major additions to Gentoo specific components have been made. The encompasses executions modules and states ranging from supporting the make.conf file to tools like layman.

37.2.57 Salt 0.12.1 Release Notes

release 2013-01-21

37.2.58 Salt 0.13.0 Release Notes

release 2013-02-12

The lucky number 13 has turned the corner! From CLI notifications when quitting a salt command, to substantial improvements on Windows, Salt 0.13.0 has arrived!

Major Features

Improved file.recurse Performance

The file.recurse system has been deployed and used in a vast array of situations. Fixes to the file state and module have led towards opening up new ways of running file.recurse to make it faster. Now the file.recurse state will download fewer files and will run substantially faster.
Salt Documentation, Release 2015.8.12

Windows Improvements
Minion stability on Windows has improved. Many ﬁle operations, including ﬁle.recurse, have been ﬁxed and improved. e network module works beer, to include network.interfaces. Both 32bit and 64bit installers are now
available.
Nodegroup Targeting in Peer System
In the past, nodegroups were not available for targeting via the peer system. is has been ﬁxed, allowing the new
nodegroup expr_form argument for the publish.publish function:
salt-call publish.publish group1 test.ping expr_form=nodegroup
Blacklist Additions
Additions allowing more granular blacklisting are available in 0.13.0. e ability to blacklist users and functions in
client_acl have been added, as well as the ability to exclude state formulas from the command line.
Command Line Pillar Embedding
Pillar data can now be embedded on the command line when calling state.sls and state.highstate. is
allows for on the ﬂy changes or seings to pillar and makes parameterizing state formulas even easier. is is done
via the keyword argument:
salt '*' state.highstate pillar='{"cheese": "spam"}'

e above example will extend the existing pillar to hold the cheese key with a value of spam. If the cheese key
is already speciﬁed in the minion's pillar then it will be overwrien.
CLI Notifications
In the past hiing ctrl-C and quiing from the salt command would just drop to a shell prompt, this caused
confusion with users who expected the remote executions to also quit. Now a message is displayed showing what
command can be used to track the execution and what the job id is for the execution.
Version Specification in Multiple-Package States
Versions can now be speciﬁed within multiple-package pkg.installed states. An example can be found below:
mypkgs:
pkg.installed:
- pkgs:
- foo
- bar: 1.2.3-4
- baz

2546

Chapter 37. Release notes


Noteworthy Changes

The configuration subsystem in Salt has been overhauled to make the opt's dict used by Salt applications more portable, the problem is that this is an incompatible change with salt-cloud, and salt-cloud will need to be updated to the latest git to work with Salt 0.13.0. Salt Cloud 0.8.5 will also require Salt 0.13.0 or later to function.

The SaltStack team is sorry for the inconvenience here, we work hard to make sure these sorts of things do not happen, but sometimes hard changes get in.

37.2.59 Salt 0.13.1 Release Notes

release 2013-02-15

37.2.60 Salt 0.13.2 Release Notes

release 2013-03-13

37.2.61 Salt 0.13.3 Release Notes

release 2013-03-18

37.2.62 Salt 0.14.0 Release Notes

release 2013-03-23

Salt 0.14.0 is here! This release was held up primarily by PyCon, Scale, and illness, but has arrived! 0.14.0 comes with many new features and is breaking ground for Salt in the area of cloud management with the introduction of Salt providing basic cloud controller functionality.

Major Features

Salt - As a Cloud Controller

This is the first primitive inroad to using Salt as a cloud controller is available in 0.14.0. Be advised that this is alpha, only tested in a few very small environments.

The cloud controller is built using kvm and libvirt for the hypervisors. Hypervisors are autodetected as minions and only need to have libvirt running and kvm installed to function. The features of the Salt cloud controller are as follows:

- Basic vm discovery and reporting
- Creation of new virtual machines
- Seeding virtual machines with Salt via qemu-nbd or libguestfs
- Live migration (shared and non shared storage)
- Delete existing VMs

It is noteworthy that this feature is still Alpha, meaning that all rights are reserved to change the interface if needs be in future releases!
Libvirt State

One of the problems with libvirt is management of certificates needed for live migration and cross communication between hypervisors. The new libvirt state makes the Salt Master hold a CA and manage the signing and distribution of keys onto hypervisors, just add a call to the libvirt state in the sls formulas used to set up a hypervisor:

```python
libvirt_keys:
    libvirt.keys
```

New get Functions

An easier way to manage data has been introduced. The pillar, grains, and config execution modules have been extended with the new get function. This function works much in the same way as the get method in a python dict, but with an enhancement, nested dict components can be extracted using a : delimiter.

If a structure like this is in pillar:

```yaml
foo:
    bar:
        baz: quo
```

Extracting it from the raw pillar in an sls formula or file template is done this way:

```python
{{ pillar['foo']['bar']['baz'] }}
```

Now with the new get function the data can be safely gathered and a default can be set allowing the template to fall back if the value is not available:

```python
{{ salt['pillar.get']('foo:bar:baz', 'qux') }}
```

This makes handling nested structures much easier, and defaults can be cleanly set. This new function is being used extensively in the new formulae repository of salt sls formulas.

### 37.2.63 Salt 0.14.1 Release Notes

**release** 2013-04-13

### 37.2.64 Salt 0.15.0 Release Notes

**release** 2013-05-03

The many new features of Salt 0.15.0 have arrived! Salt 0.15.0 comes with many smaller features and a few larger ones.

These features range from better debugging tools to the new Salt Mine system.

#### Major Features

**The Salt Mine**

First there was the peer system, allowing for commands to be executed from a minion to other minions to gather data live. Then there was the external job cache for storing and accessing long term data. Now the middle ground is
being filled in with the Salt Mine. The Salt Mine is a system used to execute functions on a regular basis on minions and then store only the most recent data from the functions on the master, then the data is looked up via targets. The mine caches data that is public to all minions, so when a minion posts data to the mine all other minions can see it.

**IPV6 Support**

0.13.0 saw the addition of initial IPV6 support but errors were encountered and it needed to be stripped out. This time the code covers more cases and must be explicitly enabled. But the support is much more extensive than before.

**Copy Files From Minions to the Master**

Minions have long been able to copy files down from the master file server, but until now files could not be easily copied from the minion up to the master.

A new function called `cp.push` can push files from the minions up to the master server. The uploaded files are then cached on the master in the master cachedir for each minion.

**Better Template Debugging**

Template errors have long been a burden when writing states and pillar. 0.15.0 will now send the compiled template data to the debug log, this makes tracking down the intermittent stage templates much easier. So running `state.sls` or `state.highstate` with `-l debug` will now print out the rendered templates in the debug information.

**State Event Firing**

The state system is now more closely tied to the master’s event bus. Now when a state fails the failure will be fired on the master event bus so that the reactor can respond to it.

**Major Syndic Updates**

The Syndic system has been basically re-written. Now it runs in a completely asynchronous way and functions primarily as an event broker. This means that the events fired on the syndic are now pushed up to the higher level master instead of the old method used which waited for the client libraries to return.

This makes the syndic much more accurate and powerful, it also means that all events fired on the syndic master make it up the pipe as well making a reactor on the higher level master able to react to minions further downstream.

**Peer System Updates**

The Peer System has been updated to run using the client libraries instead of firing directly over the publish bus. This makes the peer system much more consistent and reliable.

**Minion Key Revocation**

In the past when a minion was decommissioned the key needed to be manually deleted on the master, but now a function on the minion can be used to revoke the calling minion’s key:
$ salt-call saltutil.revoke_auth

Function Return Codes

Functions can now be assigned numeric return codes to determine if the function executed successfully. While not all functions have been given return codes, many have and it is an ongoing effort to fill out all functions that might return a non-zero return code.

Functions in Overstate

The overstate system was originally created to just manage the execution of states, but with the addition of return codes to functions, requisite logic can now be used with respect to the overstate. This means that an overstate stage can now run single functions instead of just state executions.

Pillar Error Reporting

Previously if errors surfaced in pillar, then the pillar would consist of only an empty dict. Now all data that was successfully rendered stays in pillar and the render error is also made available. If errors are found in the pillar, states will refuse to run.

Using Cached State Data

Sometimes states are executed purely to maintain a specific state rather than to update states with new configs. This is grounds for the new cached state system. By adding cache=True to a state call the state will not be generated fresh from the master but the last state data to be generated will be used. If no previous state data is available then fresh data will be generated.

Monitoring States

The new monitoring states system has been started. This is very young but allows for states to be used to configure monitoring routines. So far only one monitoring state is available, the disk.status state. As more capabilities are added to Salt UI the monitoring capabilities of Salt will continue to be expanded.

37.2.65 Salt 0.15.1 Release Notes

release 2013-05-08

The 0.15.1 release has been posted, this release includes fixes to a number of bugs in 0.15.1 and a three security patches.

Security Updates

A number of security issues have been resolved via the 0.15.1 release.
Path Injection in Minion IDs

Salt masters did not properly validate the id of a connecting minion. This can lead to an attacker uploading files to the master in arbitrary locations. In particular this can be used to bypass the manual validation of new unknown minions. Exploiting this vulnerability does not require authentication.

This issue affects all known versions of Salt.

This issue was reported by Ronald Volgers.

Patch

The issue is fixed in Salt 0.15.1. Updated packages are available in the usual locations.

Specific commits:
https://github.com/saltstack/salt/commit/5427b9438e452a5a8910d9128c6aafb45d8fd5d3
https://github.com/saltstack/salt/commit/7560908ee62351769c3cd43b03d74c1ca772cc52
https://github.com/saltstack/salt/commit/e200b8a7ff53780124e08d2bdefde7587e52bfca

RSA Key Generation Fault

RSA key generation was done incorrectly, leading to very insecure keys. It is recommended to regenerate all RSA keys.

This issue can be used to impersonate Salt masters or minions, or decrypt any transferred data.

This issue can only be exploited by attackers who are able to observe or modify traffic between Salt minions and the legitimate Salt master.

A tool was included in 0.15.1 to assist in mass key regeneration, the manage.regen_keys runner.

This issue affects all known versions of Salt.

This issue was reported by Ronald Volgers.

Patch

The issue is fixed in Salt 0.15.1. Updated packages are available in the usual locations.

Specific commits:
https://github.com/saltstack/salt/commit/5dd304276ba5745ec21fc1e6686a0b28da29e6fc

Command Injection Via ext_pillar

Arbitrary shell commands could be executed on the master by an authenticated minion through options passed when requesting a pillar.

Ext pillar options have been restricted to only allow safe external pillars to be called when prompted by the minion.

This issue affects Salt versions from 0.14.0 to 0.15.0.

This issue was reported by Ronald Volgers.
Patch

The issue is fixed in Salt 0.15.1. Updated packages are available in the usual locations.

Specific commits:
https://github.com/saltstack/salt/commit/43d8c16bd26159d827d1a945c83ac28159ec5865

37.2.66 Salt 0.15.2 Release Notes

release 2013-05-29

37.2.67 Salt 0.15.3 Release Notes

release 2013-06-01

37.2.68 Salt 0.16.0 Release Notes

release 2013-07-01

The 0.16.0 release is an exciting one, with new features in master redundancy, and a new, powerful requisite.

Major Features

Multi-Master

This new capability allows for a minion to be actively connected to multiple salt masters at the same time. This allows for multiple masters to send out commands to minions and for minions to automatically reconnect to masters that have gone down. A tutorial is available to help get started here:

Multi Master Tutorial

Prereq, the New Requisite

The new `prereq` requisite is very powerful! It allows for states to execute based on a state that is expected to make changes in the future. This allows for a change on the system to be preempted by another execution. A good example is needing to shut down a service before modifying files associated with it, allowing, for instance, a webserver to be shut down allowing a load balancer to stop sending requests while server side code is updated. In this case, the prereq will only run if changes are expected to happen in the prerequired state, and the prerequired state will always run after the prereq state and only if the prereq state succeeds.

Peer System Improvements

The peer system has been revamped to make it more reliable, faster, and like the rest of Salt, async. The peer calls when an updated minion and master are used together will be much faster!
Relative Includes

The ability to include an sls relative to the defined sls has been added, the new syntax is documented here:

Includes

More State Output Options

The state_output option in the past only supported full and terse, 0.16.0 add the mixed and changes modes further refining how states are sent to users' eyes.

Improved Windows Support

Support for Salt on Windows continues to improve. Software management on Windows has become more seamless with Linux/UNIX/BSD software management. Installed software is now recognized by the short names defined in the repository SLS. This makes it possible to run salt '*' pkg.version firefox and get back results from Windows and non-Windows minions alike.

When templating files on Windows, Salt will now correctly use Windows appropriate line endings. This makes it much easier to edit and consume files on Windows.

When using the cmd state the shell option now allows for specifying Windows Powershell as an alternate shell to execute cmd.run and cmd.script. This opens up Salt to all the power of Windows Powershell and its advanced Windows management capabilities.

Several fixes and optimizations were added for the Windows networking modules, especially when working with IPv6.

A system module was added that makes it easy to restart and shutdown Windows minions.

The Salt Minion will now look for its config file in c:\salt\conf by default. This means that it's no longer necessary to specify the -c option to specify the location of the config file when starting the Salt Minion on Windows in a terminal.

Multiple Targets for pkg.removed, pkg.purged States

Both pkg.removed and pkg.purged now support the pkgs argument, which allow for multiple packages to be targeted in a single state. This, as in pkg.installed, helps speed up these states by reducing the number of times that the package management tools (apt, yum, etc.) need to be run.

Random Times in Cron States

The temporal parameters in cron.present states (minute, hour, etc.) can now be randomized by using random instead of a specific value. For example, by using the random keyword in the minute parameter of a cron state, the same cron job can be pushed to hundreds or thousands of hosts, and they would each use a randomly-generated minute. This can be helpful when the cron job accesses a network resource, and it is not desirable for all hosts to run the job concurrently.

```
/path/to/cron/script:
cron.present:
  - user: root
  - minute: random
  - hour: 2
```
Since Salt assumes a value of \* for unspecified temporal parameters, adding a parameter to the state and setting it to `random` will change that value from \* to a randomized numeric value. However, if that field in the cron entry on the minion already contains a numeric value, then using the `random` keyword will not modify it.

**Confirmation Prompt on Key Acceptance**

When accepting new keys with `salt-key -a minion-id` or `salt-key -A`, there is now a prompt that will show the affected keys and ask for confirmation before proceeding. This prompt can be bypassed using the `-y` or `--yes` command line argument, as with other `salt-key` commands.

**Support for Setting Password Hashes on BSD Minions**

FreeBSD, NetBSD, and OpenBSD all now support setting passwords in `user.present` states.

### 37.2.69 Salt 0.16.1 Release Notes

**release** 2013-07-29

### 37.2.70 Salt 0.16.2 Release Notes

**release** 2013-08-01

Version 0.16.2 is a bugfix release for 0.16.0, and contains a number of fixes.

**Windows**

- Only allow Administrator's group and SYSTEM user access to C:salt. This eliminates a race condition where a non-admin user could modify a template or managed file before it is executed by the minion (which is running as an elevated user), thus avoiding a potential escalation of privileges. ([issue 6361](https://github.com/saltstack/salt/issues/6361))

**Grains**

- Fixed detection of `virtual` grain on OpenVZ hardware nodes
- Gracefully handle `lsb_release` data when it is enclosed in quotes
- LSB grains are now prefixed with `lsb_distrib_` instead of simply `lsb_`. The old naming is not preserved, so SLS may be affected.
- Improved grains detection on MacOS

**Pillar**

- Don’t try to load `git_pillar` if not enabled in master config ([issue 6052](https://github.com/saltstack/salt/issues/6052))
- Functions `pillar.item` and `pillar.items` added for parity with `grains.item/grains.items`. The old function `pillar.data` is preserved for backwards compatibility.
- Fixed minion traceback when Pillar SLS is malformed ([issue 5910](https://github.com/saltstack/salt/issues/5910))
Peer Publishing

- More gracefully handle improperly quoted publish commands (issue 5958)
- Fixed traceback when timeout specified via the CLI for `publish.publish, publish.full_data` (issue 5959)
- Fixed unintended change in output of `publish.publish` (issue 5928)

Minion

- Fixed salt-key usage in minionswarm script
- Quieted warning about SALT_MINION_CONFIG environment variable on minion startup and for CLI commands run via `salt-call` (issue 5956)
- Added minion config parameter `random_reauth_delay` to stagger re-auth attempts when the minion is waiting for the master to approve its public key. This helps prevent SYN flooding in larger environments.

User/Group Management

- Implement previously-ignored `unique` option for `user.present` states in FreeBSD
- Report in state output when a `group.present` state attempts to use a gid in use by another group
- Fixed regression that prevents a `user.present` state to set the password hash to the system default (i.e. an unset password)
- Fixed multiple `group.present` states with the same group (issue 6439)

File Management

- Fixed file.mkdir setting incorrect permissions (issue 6033)
- Fixed cleanup of source files for templates when `/tmp` is in `file_roots` (issue 6118)
- Fixed caching of zero-byte files when a non-empty file was previously cached at the same path
- Added HTTP authentication support to the cp module (issue 5641)
- Diffs are now suppressed when binary files are changed

Package/Repository Management

- Fixed traceback when there is only one target for `pkg.latest` states
- Fixed regression in detection of virtual packages (apt)
- Limit number of pkg database refreshes to once per `state.sls/state.highstate`
- YUM: Allow 32-bit packages with arches other than i686 to be managed on 64-bit systems (issue 6299)
- Fixed incorrect reporting in pkgrepo.managed states (issue 5517)
- Fixed 32-bit binary package installs on 64-bit RHEL-based distros, and added proper support for 32-bit packages on 64-bit Debian-based distros (issue 6303)
- Fixed issue where requisites were inadvertently being put into YUM repo files (issue 6471)
Service Management

- Fixed inaccurate reporting of results in `service.running` states when the service fails to start (issue 5894)
- Fixed handling of custom initscripts in RHEL-based distros so that they are immediately available, negating the need for a second state run to manage the service that the initscript controls

Networking

- Function `network.hwaddr` renamed to `network.hw_addr` to match `network.ip_addrs` and `network.ip_addrs6`. All three functions also now work without the underscore in the name, as well.
- Fixed traceback in `bridge.show` when interface is not present (issue 6326)

SSH

- Fixed incorrect result reporting for some `ssh_known_hosts.present` states
- Fixed inaccurate reporting when `ssh_auth.present` states are run with `test=True`, when rsa/dss is used for the `enc` param instead of ssh-rsa/ssh-dss (issue 5374)

pip

- Properly handle `-f` lines in pip freeze output
- Fixed regression in `pip.installed` states with specifying a requirements file (issue 6003)
- Fixed use of `editable` argument in `pip.installed` states (issue 6025)
- Deprecated `runas` parameter in execution function calls, in favor of `user`

MySQL

- Allow specification of `MySQL` connection arguments via the CLI, overriding/bypassing minion config params
- Allow `mysql_user.present` states to set a passwordless login (issue 5550)
- Fixed endless loop when `mysql.processlist` is run (issue 6297)

PostgreSQL

- Fixed traceback in `postgres.user_list` (issue 6352)

Miscellaneous

- Don’t allow `npm states` to be used if `npm module` is not available
- Fixed `alternatives.install` states for which the target is a symlink (issue 6162)
- Fixed traceback in `sysbench module` (issue 6175)
- Fixed traceback in job cache
- Fixed tempfile cleanup for windows
- Fixed issue where SLS files using the `pydsl renderer` were not being run
• Fixed issue where returners were being passed incorrect information (issue 5518)
• Fixed traceback when numeric args are passed to cmd.script states
• Fixed bug causing cp.get_dir to return more directories than expected (issue 6048)
• Fixed traceback when supervisord.running states are run with test=True (issue 6053)
• Fixed tracebacks when Salt encounters problems running rbenv (issue 5888)
• Only make the monit module available if monit binary is present (issue 5871)
• Fixed incorrect behavior of img.mount_image
• Fixed traceback in tomcat.deploy_war in Windows
• Don’t re-write /etc/fstab if mount fails
• Fixed tracebacks when Salt encounters problems running gem (issue 5886)
• Fixed incorrect behavior of selinux.boolean states (issue 5912)
• RabbitMQ: Quote passwords to avoid symbols being interpolated by the shell (issue 6338)
• Fixed tracebacks in extfs.mkfs and extfs.tune (issue 6462)
• Fixed a regression with the module.run state where the m_name and m_fun arguments were being ignored (issue 6464)

37.2.71 Salt 0.16.3 Release Notes

release 2013-08-09

Version 0.16.3 is another bugfix release for 0.16.0. The changes include:

• Various documentation fixes
• Fix proc directory regression (issue 6502)
• Properly detect Linaro Linux (issue 6496)
• Fix regressions in mount.mounted (issue 6522, issue 6545)
• Skip malformed state requisites (issue 6521)
• Fix regression in gitfs from bad import
• Fix for watching prereq states (including recursive requisite error) (issue 6057)
• Fix mod_watch not overriding prereq (issue 6520)
• Don’t allow functions which compile states to be called within states (issue 5623)
• Return error for malformed top.sls (issue 6544)
• Fix traceback in mysql.query
• Fix regression in binary package installation for 64-bit packages on Debian-based Linux distros (issue 6563)
• Fix traceback caused by running cp.push without having set file_recv in the master config file
• Fix scheduler configuration in pillar (issue 6201)
37.2.72 Salt 0.16.4 Release Notes

**release** 2013-09-07

Version 0.16.4 is another bugfix release for 0.16.0, likely to be the last before 0.17.0 is released. The changes include:

- Multiple documentation improvements/additions
- Added the `osfinger` and `osarch` grains
- Properly handle 32-bit packages for debian32 on x86_64 ([issue 6607](#))
- Fix regression in yum package installation in CentOS 5 ([issue 6677](#))
- Fix bug in `hg.latest` state that would erroneously delete directories ([issue 6661](#))
- Fix bug related to pid not existing for `ps.top` ([issue 6679](#))
- Fix regression in `MySQL returner` ([issue 6695](#))
- Fix IP addresses grains (`ipv4` and `ipv6`) to include all addresses ([issue 6656](#))
- Fix regression preventing authenticated FTP ([issue 6733](#))
- Fix setting password for windows users ([issue 6824](#))
- Fix `file.contains` on values YAML parses as non-string ([issue 6817](#))
- Fix `file.get_gid`, `file.get_uid`, and `file.chown` for broken symlinks ([issue 6826](#))
- Fix comment for service reloads in service state ([issue 6851](#))

37.2.73 Salt 0.17.0 Release Notes

**release** 2013-09-26

The 0.17.0 release is a very exciting release of Salt, this brings to Salt some very powerful new features and advances. The advances range from the state system to the test suite, covering new transport capabilities and making states easier and more powerful, to extending Salt Virt and much more!

The 0.17.0 release will also be the last release of Salt to follow the old 0.XX.X numbering system, the next release of Salt will change the numbering to be date based following this format:

<Year>.<Month>.<Minor>

So if the release happens in November of 2013 the number will be 13.11.0, the first bugfix release will be 13.11.1 and so forth.

**Major Features**

**Halite**

The new Halite web GUI is now available on PyPI. A great deal of work has been put into Halite to make it fully event driven and amazingly fast. The Halite UI can be started from within the Salt Master (after being installed from PyPI), or standalone, and does not require an external database to run. It is very lightweight!

This initial release of Halite is primarily the framework for the UI and the communication systems, making it easy to extend and build the UI up. It presently supports watching the event bus and firing commands over Salt.

At this time, Halite is not available as a package, but installation documentation is available at: [http://docs.saltstack.com/topics/tutorials/halite.html](http://docs.saltstack.com/topics/tutorials/halite.html)
Halite is, like the rest of Salt, Open Source!

Much more will be coming in the future of Halite!

Salt SSH

The new salt-ssh command has been added to Salt. This system allows for remote execution and states to be run over ssh. The benefit here being, that salt can run relying only on the ssh agent, rather than requiring a minion to be deployed.

The salt-ssh system runs states in a compatible way as Salt and states created and run with salt-ssh can be moved over to a standard salt deployment without modification.

Since this is the initial release of salt-ssh, there is plenty of room for improvement, but it is fully operational, not just a bootstrap tool.

Rosters

Salt is designed to have the minions be aware of the master and the master does not need to be aware of the location of the minions. The new salt roster system was created and designed to facilitate listing the targets for salt-ssh.

The roster system, like most of Salt, is a plugin system, allowing for the list of systems to target to be derived from any pluggable backend. The rosters shipping with 0.17.0 are flat and scan. Flat is a file which is read in via the salt render system and the scan roster does simple network scanning to discover ssh servers.

State Auto Order

This is a major change in how states are evaluated in Salt. State Auto Order is a new feature that makes states get evaluated and executed in the order in which they are defined in the sls file. This feature makes it very easy to see the finite order in which things will be executed, making Salt now, fully imperative AND fully declarative.

The requisite system still takes precedence over the order in which states are defined, so no existing states should break with this change. But this new feature can be turned off by setting state_auto_order: False in the master config, thus reverting to the old lexicographical order.

state.sls Runner

The state.sls runner has been created to allow for a more powerful system for orchestrating state runs and function calls across the salt minions. This new system uses the state system for organizing executions.

This allows for states to be defined that are executed on the master to call states on minions via salt-run state.sls.

Salt Thin

Salt Thin is an exciting new component of Salt, this is the ability to execute Salt routines without any transport mechanisms installed, it is a pure python subset of Salt.

Salt Thin does not have any networking capability, but can be dropped into any system with Python installed and then salt-call can be called directly. The Salt Thin system, is used by the salt-ssh command, but can still be used to just drop salt somewhere for easy use.
Event Namespacing

Events have been updated to be much more flexible. The tags in events have all been namespaced allowing easier tracking of event names.

Mercurial Fileserver Backend

The popular git fileserver backend has been joined by the mercurial fileserver backend, allowing the state tree to be managed entirely via mercurial.

External Logging Handlers

The external logging handler system allows for Salt to directly hook into any external logging system. Currently supported are sentry and logstash.

Jenkins Testing

The testing systems in Salt have been greatly enhanced, tests for salt are now executed, via jenkins.saltstack.com, across many supported platforms. Jenkins calls out to salt-cloud to create virtual machines on Rackspace, then the minion on the virtual machine checks into the master running on Jenkins where a state run is executed that sets up the minion to run tests and executes the test suite.

This now automates the sequence of running platform tests and allows for continuous destructive tests to be run.

Salt Testing Project

The testing libraries for salt have been moved out of the main salt code base and into a standalone codebase. This has been done to ease the use of the testing systems being used in salt based projects other than Salt itself.

StormPath External Authentication

The external auth system now supports the fantastic Stormpath cloud based authentication system.

LXC Support

Extensive additions have been added to Salt for LXC support. This included the backend libs for managing LXC containers. Addition into the salt-virt system is still in the works.

Mac OS X User/Group Support

Salt is now able to manage users and groups on Minions running Mac OS X. However, at this time user passwords cannot be managed.

Django ORM External Pillar

Pillar data can now be derived from Django managed databases.
Fixes from RC to release

- Multiple documentation fixes
- Add multiple source files + templating for `file.append` ([issue 6905](#issue6905))
- Support sysctl configuration files in systemd>=207 ([issue 7351](#issue7351))
- Add `file.search` and `file.replace`
- Fix cross-calling execution functions in provider overrides
- Fix locale override for postgres ([issue 4543](#issue4543))
- Fix Raspbian identification for service/pkg support ([issue 7371](#issue7371))
- Fix `cp.push` file corruption ([issue 6495](#issue6495))
- Fix ALT Linux password hash specification ([issue 3474](#issue3474))
- Multiple salt-ssh-related fixes and improvements

### 37.2.74 Salt 0.17.1 Release Notes

release 2013-10-17

Note: THIS RELEASE IS NOT COMPATIBLE WITH PREVIOUS VERSIONS. If you update your master to 0.17.1, you must update your minions as well. Sorry for the inconvenience -- this is a result of one of the security fixes listed below.

The 0.17.1 release comes with a number of improvements to salt-ssh, many bugfixes, and a number of security updates.

Salt SSH has been improved to be faster, more featureful and more secure. Since the original release of Salt SSH was primarily a proof of concept, it has been very exciting to see its rapid adoption. We appreciate the willingness of security experts to review Salt SSH and help discover oversights and ensure that security issues only exist for such a tiny window of time.

**SSH Enhancements**

**Shell Improvements**

Improvements to Salt SSH's communication have been added that improve routine execution regardless of the target system's login shell.

**Performance**

Deployment of routines is now faster and takes fewer commands to execute.

**Security Updates**

Be advised that these security issues all apply to a small subset of Salt users and mostly apply to Salt SSH.
Insufficient Argument Validation

This issue allowed for a user with limited privileges to embed executions inside of routines to execute routines that should be restricted. This applies to users using external auth or client ACL and opening up specific routines.

Be advised that these patches address the direct issue. Additional commits have been applied to help mitigate this issue from resurfacing.

MITM SSH attack in salt-ssh

SSH host keys were being accepted by default and not enforced on future SSH connections. These patches set SSH host key checking by default and can be overridden by passing the -i flag to salt-ssh.

CVE

CVE-2013-4436

Affected Versions

0.17.0
Insecure Usage of /tmp in salt-ssh

The initial release of salt-ssh used the /tmp directory in an insecure way. These patches not only secure usage of files under /tmp in salt-ssh, but also add checksum validation for all packages sent into the now secure locations on target systems.

YAML Calling Unsafe Loading Routine

It has been argued that this is not a valid security issue, as the YAML loading that was happening was only being called after an initial gateway filter in Salt has already safely loaded the YAML and would fail if non-safe routines were embedded. Nonetheless, the CVE was filed and patches applied.

Failure to Validate Minions Posting Data

This issue allowed a minion to pose as another authorized minion when posting data such as the mine data. All minions now pass through the id challenge before posting such data.

CVE

CVE-2013-4439

Affected Versions

0.15.0 - 0.17.0

Patches

https://github.com/saltstack/salt/commit/7b850ff3d07ef6782888914ac4556c01e8a1c482 https://github.com/saltstack/salt/commit/151759b2a1e1c6ce29277aa81b054219147f80fd
Fix Reference

Version 0.17.1 is the first bugfix release for 0.17.0. The changes include:

- Fix symbolic links in thin.tgz (issue 7482)
- Pass env through to file.patch state (issue 7452)
- Service provider fixes and reporting improvements (issue 7361)
- Add --priv option for specifying salt-ssh private key
- Fix salt-thin's salt-call on setuptools installations (issue 7516)
- Fix salt-ssh to support passwords with spaces (issue 7480)
- Fix regression in wildcard includes (issue 7455)
- Fix salt-call outputter regression (issue 7456)
- Fix custom returner support for startup states (issue 7540)
- Fix value handling in augeas (issue 7605)
- Fix regression in apt (issue 7624)
- Fix minion ID guessing to use socket.getfqdn() first (issue 7558)
- Add minion ID caching (issue 7558)
- Fix salt-key race condition (issue 7304)
- Add --include-all flag to salt-key (issue 7399)
- Fix custom grains in pillar (part of issue 5716, issue 6083)
- Fix race condition in salt-key (issue 7304)
- Fix regression in minion ID guessing, prioritize socket.getfqdn() (issue 7558)
- Cache minion ID on first guess (issue 7558)
- Allow trailing slash in file.directory state
- Fix reporting of file_roots in pillar return (issue 5449 and issue 5951)
- Remove pillar matching for mine.get (issue 7197)
- Sanitize args for multiple execution modules
- Fix yumpkg mod_repo functions to filter hidden args (issue 7656)
- Fix conflicting IDs in state includes (issue 7526)
- Fix mysql_grants.absent string formatting issue (issue 7827)
- Fix postgres.version so it won’t return None (issue 7695)
- Fix for trailing slashes in mount.mounted state
- Fix rogue Attr atribErrors in the outpufter system (issue 7845)
- Fix for incorrect ssh key encodings resulting in incorrect key added (issue 7718)
- Fix for pillar/grains naming regression in python renderer ([issue 7693])
- Fix args/kwargs handling in the scheduler ([issue 7422])
- Fix logfile handling for file://, tcp://, and udp:// ([issue 7754])
- Fix error handling in config file parsing ([issue 6714])
- Fix RVM using sudo when running as non-root user ([issue 2193])
- Fix client ACL and underlying logging bugs ([issue 7706])
- Fix scheduler bug with returner ([issue 7367])
- Fix user management bug related to default groups ([issue 7690])
- Fix various salt-ssh bugs ([issue 7528])
- Many various documentation fixes

### 37.2.75 Salt 0.17.2 Release Notes

**release** 2013-11-14

Version 0.17.2 is another bugfix release for 0.17.0. The changes include:

- Add ability to delete key with grains.delval ([issue 7872])
- Fix possible state compiler stack trace ([issue 5767])
- Fix architecture regression in yumpkg ([issue 7813])
- Use correct ps on Debian to prevent truncating ([issue 5646])
- Fix grains targeting for new grains ([issue 5737])
- Fix bug with merging in git_pillar ([issue 6992])
- Fix print_jobs duplicate results
- Fix apt version specification for pkg.install
- Fix possible KeyError from ext_job_cache missing option
- Fix auto_order for -names states ([issue 7649])
- Fix regression in new gitfs installs (directory not found error)
- Fix escape pipe issue on Windows for file.recurse ([issue 7967])
- Fix fileclient in case of master restart ([issue 7987])
- Try to output warning if CLI command malformed ([issue 6538])
- Fix --out=quiet to actually be quiet ([issue 8000])
- Fix for state.sls in salt-ssh ([issue 7991])
- Fix for MySQL grants ordering issue ([issue 5817])
- Fix traceback for certain missing CLI args ([issue 8016])
- Add ability to disable lspci queries on master ([issue 4906])
- Fail if sls defined in topfile does not exist ([issue 5998])
- Add ability to downgrade MySQL grants ([issue 6606])
- Fix ssh_auth.absent traceback ([issue 8043])
• Add upstart detection for Debian/Raspbian (issue 8039)
• Fix ID-related issues (issue 8052, issue 8050, and others)
• Fix for jinja rendering issues (issue 8066 and issue 8079)
• Fix argument parsing in salt-ssh (issue 7928)
• Fix some GPU detection instances (issue 6945)
• Fix bug preventing includes from other environments in SLS files
• Fix for kwargs with dashes (issue 8102)
• Fix salt.utils.which for windows `.exe' (issue 7904)
• Fix apache.adduser without apachectl (issue 8123)
• Fix issue with evaluating test kwarg in states (issue 7788)
• Fix regression in salt.client.Caller() (issue 8078)
• Fix apt-key silent failure
• Fix bug where cmd.script would try to run even if caching failed (issue 7601)
• Fix apt pkg.latest regression (issue 8067)
• Fix for mine data not being updated (issue 8144)
• Fix for noarch packages in yum
• Fix a Xen detection edge case (issue 7839)
• Fix windows __opts__ dictionary persistence (issue 7714)
• Fix version generation for when it's part of another git repo (issue 8090)
• Fix _handle_iorder stacktrace so that the real syntax error is shown (issue 8114 and issue 7905)
• Fix git.latest state when a commit SHA is used (issue 8163)
• Fix various small bugs in yumpkg.py (issue 8201)
• Fix for specifying identify file in git.latest (issue 8094)
• Fix for --output-file CLI arg (issue 8205)
• Add ability to specify shutdown time for system.shutdown (issue 7833)
• Fix for salt version using non-salt git repo info (issue 8266)
• Add additional hints at impact of pkgrepo states when test=True (issue 8247)
• Fix for salt-ssh files not being owned by root (issue 8216)
• Fix retry logic and error handling in fileserver (related to issue 7755)
• Fix file.replace with test=True (issue 8279)
• Add flag for limiting file traversal in fileserver (issue 6928)
• Fix for extra mine processes (issue 5729)
• Fix for unloading custom modules (issue 7691)
• Fix for salt-ssh opts (issue 8005 and issue 8271)
• Fix compound matcher for grains (issue 7944)
• Improve error reporting in ebuild module (related to issue 5393)
- Add `dir_mode` to `file.managed` ([issue 7860](#))
- Improve traceroute support for FreeBSD and OS X ([issue 4927](#))
- Fix for matching minions under syndics ([issue 7671](#))
- Improve exception handling for missing ID ([issue 8259](#))
- Fix grain mismatch for ScientificLinux ([issue 8338](#))
- Add configuration option for `minion_id_caching`
- Fix open mode auth errors ([issue 8402](#))

### 37.2.76 Salt 0.17.3 Release Notes

*Release* 2013-12-08

**Note:** 0.17.3 had some regressions which were promptly fixed in the 0.17.4 release. Please use 0.17.4 instead.

Version 0.17.3 is another bugfix release for 0.17.0. The changes include:

- Fix some jinja render errors ([issue 8418](#))
- Fix `file.replace` state changing file ownership ([issue 8399](#))
- Fix state ordering with the PyDSL renderer ([issue 8446](#))
- Fix for new npm version ([issue 8517](#))
- Fix for pip state requiring `name` even with requirements file ([issue 8519](#))
- Fix yum logging to open terminals ([issue 3855](#))
- Add sane maxrunning defaults for scheduler ([issue 8563](#))
- Fix states duplicate key detection ([issue 8053](#))
- Fix SUSE patch level reporting ([issue 8428](#))
- Fix managed file creation umask ([issue 8590](#))
- Fix logstash exception ([issue 8635](#))
- Improve argument exception handling for salt command ([issue 8016](#))
- Fix pecl success reporting ([issue 8750](#))
- Fix launchctl module exceptions ([issue 8759](#))
- Fix argument order in `pw_user` module
- Add warnings for failing grains ([issue 8690](#))
- Fix hgfs problems caused by connections left open ([issue 8811](#) and [issue 8810](#))
- Add Debian iptables default for `iptables-persistent` package ([issue 8889](#))
- Fix installation of packages with dots in pkg name ([issue 8614](#))
- Fix noarch package installation on CentOS 6 ([issue 8945](#))
- Fix `portage_config.enforce_nice_config` ([issue 8252](#))
- Fix `salt.util.copyfile` umask usage ([issue 8590](#))
- Fix rescheduling of failed jobs ([issue 8941](#))
Salt Documentation, Release 2015.8.12

- Fix pkg on Amazon Linux (uses yumpkg5 now) (issue 8226)
- Fix conflicting options in postgres module (issue 8717)
- Fix ps modules for psutil >= 0.3.0 (issue 7432)
- Fix postgres module to return False on failure (issue 8778)
- Fix argument passing for args with pound signs (issue 8585)
- Fix pid of salt CLi command showing in status.pid output (issue 8720)
- Fix rvm to run gem as the correct user (issue 8951)
- Fix namespace issue in win_file module (issue 9060)
- Fix masterless state paths on windows (issue 9021)
- Fix timeout option in master config (issue 9040)

37.2.77 Salt 0.17.4 Release Notes

release 2013-12-10

Version 0.17.4 is another bugfix release for 0.17.0. The changes include:
- Fix file.replace bug when replacement str is numeric (issue 9101)
- Fix regression in file.managed (issue 9131)
- Prevent traceback when job is None. (issue 9145)

37.2.78 Salt 0.17.5 Release Notes

release 2014-01-27

Version 0.17.5 is another bugfix release for 0.17.0. The changes include:
- Fix user.present states with non-string fullname (issue 9085)
- Fix virt.init return value on failure (issue 6870)
- Fix reporting of file.blockreplace state when test=True
- Fix network.interfaces when used in cron (issue 7990)
- Fix bug in pkgrepo when switching to/from mirrorlist-based repo def (issue 9121)
- Fix infinite recursion when cache file is corrupted
- Add checking for rev and mirror/bare args in git.latest (issue 9107)
- Add cmd.watch alias (points to cmd.wait) (issue 8612)
- Fix stacktrace when prereq is not formed as a list (issue 8235)
- Fix stdin issue with lvdisplay command (issue 9128)
- Add pre-check function for range matcher (issue 9236)
- Add exception handling for psutil for processes that go missing (issue 9274)
- Allow _in requisites to match both on ID and name (issue 9061)
- Fix multiple client timeout issues (issue 7157 and issue 9302, probably others)
- Fix ZMQError: Operation cannot be accomplished in current state errors (issue 6306)

37.2. Previous Releases 2569
• Multiple optimization in minion auth routines
• Clarify logs for minion ID caching

37.2.79 Salt 0.6.0 release notes

The Salt remote execution manager has reached initial functionality! Salt is a management application which can be used to execute commands on remote sets of servers.

The whole idea behind Salt is to create a system where a group of servers can be remotely controlled from a single master, not only can commands be executed on remote systems, but salt can also be used to gather information about your server environment.

Unlike similar systems, like Func and MCollective, Salt is extremely simple to setup and use, the entire application is contained in a single package, and the master and minion daemons require no running dependencies in the way that Func requires Certmaster and MCollective requires activeMQ.

Salt also manages authentication and encryption. Rather than using SSL for encryption, salt manages encryption on a payload level, so the data sent across the network is encrypted with fast AES encryption, and authentication uses RSA keys. This means that Salt is fast, secure, and very efficient.

Messaging in Salt is executed with ZeroMQ, so the message passing interface is built into salt and does not require an external ZeroMQ server. This also adds speed to Salt since there is no additional bloat on the networking layer, and ZeroMQ has already proven itself as a very fast networking system.

The remote execution in Salt is "Lazy Execution", in that once the command is sent the requesting network connection is closed. This makes it easier to detach the execution from the calling process on the master, it also means that replies are cached, so that information gathered from historic commands can be queried in the future.

Salt also allows users to make execution modules in Python. Writers of these modules should also be pleased to know that they have access to the impressive information gathered from PuppetLabs’ Facter application, making Salt module more flexible. In the future I hope to also allow Salt to group servers based on Facter information as well.

All in all Salt is fast, efficient, and clean, can be used from a simple command line client or through an API, uses message queue technology to make network execution extremely fast, and encryption is handled in a very fast and efficient manner. Salt is also VERY easy to use and VERY easy to extend.

You can find the source code for Salt on my GitHub page, I have also set up a few wiki pages explaining how to use and set up Salt. If you are using Arch Linux there is a package available in the Arch Linux AUR.

Salt 0.6.0 Source: https://cloud.github.com/downloads/saltstack/salt/salt-0.6.0.tar.gz
GitHub page: https://github.com/saltstack/salt
Wiki: https://github.com/saltstack/salt/wiki
Arch Linux Package: https://aur.archlinux.org/packages/salt-git/

I am very open to contributions, for instance I need packages for more Linux distributions as well as BSD packages and testers.

Give Salt a try, this is the initial release and is not a 1.0 quality release, but it has been working well for me! I am eager to get your feedback!

37.2.80 Salt 0.7.0 release notes

I am pleased to announce the release of Salt 0.7.0!

This release marks what is the first stable release of salt, 0.7.0 should be suitable for general use.
0.7.0 Brings the following new features to Salt:

- Integration with Facter data from puppet labs
- Allow for matching minions from the salt client via Facter information
- Minion job threading, many jobs can be executed from the master at once
- Preview of master clustering support - Still experimental
- Introduce new minion modules for stats, virtualization, service management and more
- Add extensive logging to the master and minion daemons
- Add sys.reload_functions for dynamic function reloading
- Greatly improve authentication
- Introduce the saltkey command for managing public keys
- Begin backend development preparatory to introducing butter
- Addition of man pages for the core commands
- Extended and cleaned configuration

0.7.0 Fixes the following major bugs:

- Fix crash in minions when matching failed
- Fix configuration file lookups for the local client
- Repair communication bugs in encryption
- Numerous fixes in the minion modules

The next release of Salt should see the following features:

- Stabilize the cluster support
- Introduce a remote client for salt command tiers
- salt-ftp system for distributed file copies
- Initial support for `butter`

Coming up next is a higher level management framework for salt called Butter. I want salt to stay as a simple and effective communication framework, and allow for more complicated executions to be managed via Butter.

Right now Butter is being developed to act as a cloud controller using salt as the communication layer, but features like system monitoring and advanced configuration control (a puppet manager) are also in the pipe.

Special thanks to Joseph Hall for the status and network modules, and thanks to Matthias Teege for tracking down some configuration bugs!

Salt can be downloaded from the following locations:

Source Tarball:
https://cloud.github.com/downloads/saltstack/salt/salt-0.7.0.tar.gz

Arch Linux Package:
https://aur.archlinux.org/packages/salt-git/

Please enjoy the latest Salt release!
37.2.81 Salt 0.8.0 release notes

Salt 0.8.0 is ready for general consumption! The source tarball is available on GitHub for download:
https://cloud.github.com/downloads/saltstack/salt/salt-0.8.0.tar.gz

A lot of work has gone into salt since the last release just 2 weeks ago, and salt has improved a great deal. A swath of new features are here along with performance and threading improvements!

The main new features of salt 0.8.0 are:
Salt-cp
Cython minion modules
Dynamic returners
Faster return handling
Lowered required Python version to 2.6
Advanced minion threading
Configurable minion modules

Salt-cp

The salt-cp command introduces the ability to copy simple files via salt to targeted servers. Using salt-cp is very simple, just call salt-cp with a target specification, the source file(s) and where to copy the files on the minions. For instance:

# salt-cp '*' /etc/hosts /etc/hosts

Will copy the local /etc/hosts file to all of the minions.

Salt-cp is very young, in the future more advanced features will be added, and the functionality will much more closely resemble the cp command.

Cython minion modules

Cython is an amazing tool used to compile Python modules down to c. This is arguably the fastest way to run Python code, and since pyzmq requires cython, adding support to salt for cython adds no new dependencies.

Cython minion modules allow minion modules to be written in cython and therefore executed in compiled c. Simply write the salt module in cython and use the file extension “.pyx” and the minion module will be compiled when the minion is started. An example cython module is included in the main distribution called cytest.pyx:

https://github.com/saltstack/salt/blob/develop/salt/modules/cytest.pyx

Dynamic Returners

By default salt returns command data back to the salt master, but now salt can return command data to any system. This is enabled via the new returners modules feature for salt. The returners modules take the return data and sends it to a specific module. The returner modules work like minion modules, so any returner can be added to the minions.

This means that a custom data returner can be added to communicate the return data so anything from MySQL, Redis, MongoDB, and more!

There are 2 simple stock returners in the returners directory:

https://github.com/saltstack/salt/blob/develop/salt/returners
The documentation on writing returners will be added to the wiki shortly, and returners can be written in pure Python, or in cython.

**Configurable Minion Modules**

Minion modules may need to be configured, now the options passed to the minion configuration file can be accessed inside of the minion modules via the `__opt__` dict.

Information on how to use this simple addition has been added to the wiki: [Writing modules](https://github.com/saltstack/salt/blob/develop/salt/modules/test.py)

**Advanced Minion Threading**

In 0.7.0 the minion would block after receiving a command from the master, now the minion will spawn a thread or multiprocess. By default Python threads are used because for general use they have proved to be faster, but the minion can now be configured to use the Python multiprocessing module instead. Using multiprocessing will cause executions that are CPU bound or would otherwise exploit the negative aspects of the Python GIL to run faster and more reliably, but simple calls will still be faster with Python threading. The configuration option can be found in the minion configuration file:

**Lowered Supported Python to 2.6**

The requirement for Python 2.7 has been removed to support Python 2.6. I have received requests to take the minimum Python version back to 2.4, but unfortunately this will not be possible, since the ZeroMQ Python bindings do not support Python 2.4.

Salt 0.8.0 is a very major update, it also changes the network protocol slightly which makes communication with older salt daemons impossible, your master and minions need to be upgraded together!

I could use some help bringing salt to the people! Right now I only have packages for Arch Linux, Fedora 14 and Gentoo. We need packages for Debian and people willing to help test on more platforms. We also need help writing more minion modules and returner modules. If you want to contribute to salt please hop on the mailing list and send in patches, make a fork on GitHub and send in pull requests! If you want to help but are not sure where you can, please email me directly or post to the mailing list!

I hope you enjoy salt, while it is not yet 1.0 salt is completely viable and usable!

-Thomas S. Hatch

### 37.2.82 Salt 0.8.7 release notes

It has been a month since salt 0.8.0, and it has been a long month! But Salt is still coming along strong. 0.8.7 has a lot of changes and a lot of updates. This update makes Salt’s ZeroMQ back end better, strips Facter from the dependencies, and introduces interfaces to handle more capabilities.

Many of the major updates are in the background, but the changes should shine through to the surface. A number of the new features are still a little thin, but the back end to support expansion is in place.

I also recently gave a presentation to the Utah Python users group in Salt Lake City, the slides from this presentation are available here: [https://cloud.github.com/downloads/saltstack/salt/Salt.pdf](https://cloud.github.com/downloads/saltstack/salt/Salt.pdf)
The video from this presentation will be available shortly.

The major new features and changes in Salt 0.8.7 are:

- Revamp ZeroMQ topology on the master for better scalability
- State enforcement
- Dynamic state enforcement managers
- Extract the module loader into salt.loader
- Make Job ids more granular
- Replace Facter functionality with the new salt grains interface
- Support for “virtual” salt modules
- Introduce the salt-call command
- Better debugging for minion modules

The new ZeroMQ topology allows for better scalability, this will be required by the need to execute massive file transfers to multiple machines in parallel and state management. The new ZeroMQ topology is available in the aforementioned presentation.

0.8.7 introduces the capability to declare states, this is similar to the capabilities of Puppet. States in salt are declared via state data structures. This system is very young, but the core feature set is available. Salt states work around rendering files which represent Salt high data. More on the Salt state system will be documented in the near future.

The system for loading salt modules has been pulled out of the minion class to be a standalone module, this has enabled more dynamic loading of Salt modules and enables many of the updates in 0.8.7 –

https://github.com/saltstack/salt/blob/develop/salt/loader.py

Salt Job ids are now microsecond precise, this was needed to repair a race condition unveiled by the speed improvements in the new ZeroMQ topology.

The new grains interface replaces the functionality of Facter, the idea behind grains differs from Facter in that the grains are only used for static system data, dynamic data needs to be derived from a call to a salt module. This makes grains much faster to use, since the grains data is generated when the minion starts.

Virtual salt modules allows for a salt module to be presented as something other than its module name. The idea here is that based on information from the minion decisions about which module should be presented can be made. The best example is the pacman module. The pacman module will only load on Arch Linux minions, and will be called pkg. Similarly the yum module will be presented as pkg when the minion starts on a Fedora/RedHat system.

The new salt-call command allows for minion modules to be executed from the minion. This means that on the minion a salt module can be executed, this is a great tool for testing Salt modules. The salt-call command can also be used to view the grains data.

In previous releases when a minion module threw an exception very little data was returned to the master. Now the stack trace from the failure is returned making debugging of minion modules MUCH easier.

Salt is nearing the goal of 1.0, where the core feature set and capability is complete!

Salt 0.8.7 can be downloaded from GitHub here: https://cloud.githubusercontent.com/downloads/saltstack/salt/salt-0.8.7.tar.gz

-Thomas S Hatch

37.2.83 Salt 0.8.8 release notes

Salt 0.8.8 is here! This release adds a great deal of code and some serious new features. The latest release can be downloaded here: https://cloud.githubusercontent.com/downloads/saltstack/salt/salt-0.8.8.tar.gz
Improved Documentation has been set up for salt using sphinx thanks to the efforts of Seth House. This new documentation system will act as the back end to the salt website which is still under heavy development. The new sphinx documentation system has also been used to greatly clean up the salt manpages. The salt 7 manpage in particular now contains extensive information which was previously only in the wiki. The new documentation can be found at: http://docs.saltstack.com/ We still have a lot to add, and when the domain is set up I will post another announcement.

More additions have been made to the ZeroMQ setup, particularly in the realm of file transfers. Salt 0.8.8 introduces a built in, stateless, encrypted file server which allows salt minions to download files from the salt master using the same encryption system used for all other salt communications. The main motivation for the salt file server has been to facilitate the new salt state system.

Much of the salt code has been cleaned up and a new cleaner logging system has been introduced thanks to the efforts of Pedro Algarvio. These additions will allow for much more flexible logging to be executed by salt, and fixed a great deal of my poor spelling in the salt docstrings! Pedro Algarvio has also cleaned up the API, making it easier to embed salt into another application.

The biggest addition to salt found in 0.8.8 is the new state system. The salt module system has received a new front end which allows salt to be used as a configuration management system. The configuration management system allows for system configuration to be defined in data structures. The configuration management system, or as it is called in salt, the “salt state system” supports many of the features found in other configuration managers, but allows for system states to be written in a far simpler format, executes at blazing speeds, and operates via the salt minion matching system. The state system also operates within the normal scope of salt, and requires no additional configuration to use.

The salt state system can enforce the following states with many more to come: Packages Files Services Executing commands Hosts

The system used to define the salt states is based on a data structure, the data structure used to define the salt states has been made to be as easy to use as possible. The data structure is defined by default using a YAML file rendered via a Jinja template. This means that the state definition language supports all of the data structures that YAML supports, and all of the programming constructs and logic that Jinja supports. If the user does not like YAML or Jinja the states can be defined in yaml-mako, json-jinja, or json-mako. The system used to render the states is completely dynamic, and any rendering system can be added to the capabilities of Salt, this means that a rendering system that renders XML data in a cheetah template, or whatever you can imagine, can be easily added to the capabilities of salt.

The salt state system also supports isolated environments, as well as matching code from several environments to a single salt minion.

The feature base for Salt has grown quite a bit since my last serious documentation push. As we approach 0.9.0 the goals are becoming very clear, and the documentation needs a lot of work. The main goals for 0.9.0 are to further refine the state system, fix any bugs we find, get Salt running on as many platforms as we can, and get the documentation filled out. There is a lot more to come as Salt moves forward to encapsulate a much larger scope, while maintaining supreme usability and simplicity.

If you would like a more complete overview of Salt please watch the Salt presentation: Slides: https://cloud.github.com/downloads/saltstack/salt/Salt.pdf

-Thomas S Hatch

37.2.84 Salt 0.8.9 Release Notes

Salt 0.8.9 has finally arrived! Unfortunately this is much later than I had hoped to release 0.8.9, life has been very crazy over the last month. But despite challenges, Salt has moved forward!

This release, as expected, adds few new features and many refinements. One of the most exciting aspect of this release is that the development community for salt has grown a great deal and much of the code is from contributors.
Also, I have filled out the documentation a great deal. So information on States is properly documented, and much of the documentation that was out of date has been filled in.

Download!

The Salt source can be downloaded from the salt GitHub site:
https://cloud.github.com/downloads/saltstack/salt/salt-0.8.9.tar.gz

Or from PyPI:
https://pypi.python.org/packages/source/s/salt/salt-0.8.9.tar.gz

Here’s the md5sum:
7d5aca4633bc92f590f59e82f43b56

For instructions on how to set up Salt please see the *Installation* instructions.

New Features

Salt Run

A big feature is the addition of Salt run, the `salt-run` command allows for master side execution modules to be made that gather specific information or execute custom routines from the master.

Documentation for salt-run can be found [here](#).

Refined Outputters

One problem often complained about in salt was the fact that the output was so messy. Thanks to help from Jeff Schroeder a cleaner interface for the command output for the Salt CLI has been made. This new interface makes adding new printout formats easy and additions to the capabilities of minion modules makes it possible to set the printout mode or `outputter` for functions in minion modules.

Cross Calling Salt Modules

Salt modules can now call each other, the `__salt__` dict has been added to the predefined references in minion modules. This new feature is documented in the `modules documentation`

Watch Option Added to Salt State System

Now in Salt states you can set the watch option, this will allow watch enabled states to change based on a change in the other defined states. This is similar to subscribe and notify statements in puppet.

Root Dir Option

Travis Cline has added the ability to define the option `root_dir` which allows the salt minion to operate in a subdir. This is a strong move in supporting the minion running as an unprivileged user.
Config Files Defined in Variables

Thanks again to Travis Cline, the master and minion configuration file locations can be defined in environment variables now.

New Modules

Quite a few new modules, states, returners, and runners have been made.

New Minion Modules

apt

Support for apt-get has been added, this adds greatly improved Debian and Ubuntu support to Salt!

useradd and groupadd

Support for manipulating users and groups on Unix-like systems.

moosefs

Initial support for reporting on aspects of the distributed file system, MooseFS. For more information on MooseFS please see: http://www.moosefs.org
Thanks to Joseph Hall for his work on MooseFS support.

mount

Manage mounts and the fstab.

puppet

Execute puppet on remote systems.

shadow

Manipulate and manage the user password file.

ssh

Interact with ssh keys.
New States

user and group

Support for managing users and groups in Salt States.

mount

Enforce mounts and the fstab.

New Returners

mongo_return

Send the return information to a MongoDB server.

New Runners

manage

Display minions that are up or down.

37.2.85 Salt 0.9.0 Release Notes

release 2011-08-27

Salt 0.9.0 is here. This is an exciting release. 0.9.0 includes the new network topology features allowing peer salt commands and masters of masters via the syndic interface.

0.9.0 also introduces many more modules, improvements to the API and improvements to the ZeroMQ systems.

Download!

The Salt source can be downloaded from the salt GitHub site:
https://cloud.github.com/downloads/saltstack/salt/salt-0.9.0.tar.gz

Or from PyPI:
https://pypi.python.org/packages/source/s/salt/salt-0.9.0.tar.gz

Here is the md5sum:
9a925da04981e65a0f237f2e77ddab37

For instructions on how to set up Salt please see the Installation instructions.
New Features

Salt Syndic

The new Syndic interface allows a master to be commanded via another higher level salt master. This is a powerful solution allowing a master control structure to exist, allowing salt to scale to much larger levels than before.

Peer Communication

0.9.0 introduces the capability for a minion to call a publication on the master and receive the return from another set of minions. This allows salt to act as a communication channel between minions and as a general infrastructure message bus.

Peer communication is turned off by default but can be enabled via the peer option in the master configuration file. Documentation on the new Peer interface.

Easily Extensible API

The minion and master classes have been redesigned to allow for specialized minion and master servers to be easily created. An example on how this is done for the master can be found in the master.py salt module:

https://github.com/saltstack/salt/blob/develop/salt/master.py

The Master class extends the SMaster class and set up the main master server.

The minion functions can now also be easily added to another application via the SMinion class, this class can be found in the minion.py module:

https://github.com/saltstack/salt/blob/develop/salt/minion.py

Cleaner Key Management

This release changes some of the key naming to allow for multiple master keys to be held based on the type of minion gathering the master key.

The -d option has also been added to the salt-key command allowing for easy removal of accepted public keys.

The --gen-keys option is now available as well for salt-key, this allows for a salt specific RSA key pair to be easily generated from the command line.

Improved 0MQ Master Workers

The 0MQ worker system has been further refined to be faster and more robust. This new system has been able to handle a much larger load than the previous setup. The new system uses the IPC protocol in 0MQ instead of TCP.

New Modules

Quite a few new modules have been made.
New Minion Modules

apache
Work directly with apache servers, great for managing balanced web servers

cron
Read out the contents of a systems crontabs

mdadm
Module to manage raid devices in Linux, appears as the "raid" module

mysql
Gather simple data from MySQL databases

ps
Extensive utilities for managing processes

publish
Used by the peer interface to allow minions to make publications

37.2.86 Salt 0.9.1 Release Notes

release 2011-08-29

37.2.87 Salt 0.9.2 Release Notes

release 2011-09-17
Salt 0.9.2 has arrived! 0.9.2 is primarily a bugfix release, the exciting component in 0.9.2 is greatly improved support for salt states. All of the salt states interfaces have been more thoroughly tested and the new salt-states git repo is growing with example of how to use states.

This release introduces salt states for early developers and testers to start helping us clean up the states interface and make it ready for the world!
0.9.2 also fixes a number of bugs found on Python 2.6.
Download!

The Salt source can be downloaded from the salt GitHub site:
https://cloud.github.com/downloads/saltstack/salt/salt-0.9.2.tar.gz
Or from PyPI:
https://pypi.python.org/packages/source/s/salt/salt-0.9.2.tar.gz
For instructions on how to set up Salt please see the Installation instructions.

New Features

Salt-Call Additions

The salt-call command has received an overhaul, it now hooks into the outputter system so command output looks clean, and the logging system has been hooked into salt-call, so the -l option allows the logging output from salt minion functions to be displayed.

The end result is that the salt-call command can execute the state system and return clean output:

```bash
# salt-call state.highstate
```

State System Fixes

The state system has been tested and better refined. As of this release the state system is ready for early testers to start playing with. If you are interested in working with the state system please check out the (still very small) salt-states GitHub repo:

https://github.com/saltstack/salt-states

This git repo is the active development branch for determining how a clean salt-state database should look and act. Since the salt state system is still very young a lot of help is still needed here. Please fork the salt-states repo and help us develop a truly large and scalable system for configuration management!

Notable Bug Fixes

Python 2.6 String Formatting

Python 2.6 does not support format strings without an index identifier, all of them have been repaired.

Cython Loading Disabled by Default

Cython loading requires a development tool chain to be installed on the minion, requiring this by default can cause problems for most Salt deployments. If Cython auto loading is desired it will need to be turned on in the minion config.

37.2.88 Salt 0.9.3 Release Notes

release 2011-11-05
Salt 0.9.3 is finally arrived. This is another big step forward for Salt, new features range from proper FreeBSD support to fixing issues seen when attaching a minion to a master over the Internet.

The biggest improvements in 0.9.3 though can be found in the state system, it has progressed from something ready for early testers to a system ready to compete with platforms such as Puppet and Chef. The backbone of the state system has been greatly refined and many new features are available.

**Download!**

The Salt source can be downloaded from the salt GitHub site:

https://cloud.github.com/downloads/saltstack/salt/salt-0.9.3.tar.gz

Or from PyPI:

https://pypi.python.org/packages/source/s/salt/salt-0.9.3.tar.gz

For instructions on how to set up Salt please see the *Installation* instructions.

**New Features**

**WAN Support**

Recently more people have been testing Salt minions connecting to Salt Masters over the Internet. It was found that Minions would commonly lose their connection to the master when working over the internet. The minions can now detect if the connection has been lost and reconnect to the master, making WAN connections much more reliable.

**State System Fixes**

Substantial testing has gone into the state system and it is ready for real world usage. A great deal has been added to the documentation for states and the modules and functions available to states have been cleanly documented.

A number of State System bugs have also been found and repaired, the output from the state system has also been refined to be extremely clear and concise.

Error reporting has also been introduced, issues found in sls files will now be clearly reported when executing Salt States.

**Extend Declaration**

The Salt States have also gained the `extend` declaration. This declaration allows for states to be cleanly modified in a post environment. Simply said, if there is an apache.sls file that declares the apache service, then another sls can include apache and then extend it:

```yaml
include:
  - apache

extend:
  apache:
    service:
      - require:
        - pkg: mod_python
```
mod_python:
  pkg:
    - installed

The notable behavior with the extend functionality is that it literally extends or overwrites a declaration set up in another sls module. This means that Salt will behave as though the modifications were made directly to the apache sls. This ensures that the apache service in this example is directly tied to all requirements.

**Highstate Structure Specification**

This release comes with a clear specification of the Highstate data structure that is used to declare Salt States. This specification explains everything that can be declared in the Salt SLS modules.

The specification is extremely simple, and illustrates how Salt has been able to fulfill the requirements of a central configuration manager within a simple and easy to understand format and specification.

**SheBang Renderer Switch**

It came to our attention that having many renderers means that there may be a situation where more than one State Renderer should be available within a single State Tree.

The method chosen to accomplish this was something already familiar to developers and systems administrators, a SheBang. The Python State Renderer displays this new capability.

**Python State Renderer**

Until now Salt States could only be declared in yaml or json using Jinja or Mako. A new, very powerful, renderer has been added, making it possible to write Salt States in pure Python:

```
#!/py

def run():
    
    """Install the python-mako package
    """

    return {'include': ['python'],
            'python-mako': {'pkg': ['installed']}}
```

This renderer is used by making a run function that returns the Highstate data structure. Any capabilities of Python can be used in pure Python sls modules.

This example of a pure Python sls module is the same as this example in yaml:

```
include:
  - python

python-mako:
  pkg:
    - installed
```
FreeBSD Support

Additional support has been added for FreeBSD, this is Salt's first branch out of the Linux world and proves the viability of Salt on non-Linux platforms.

Salt remote execution already worked on FreeBSD, and should work without issue on any Unix-like platform. But this support comes in the form of package management and user support, so Salt States also work on FreeBSD now.

The new freebsdpkg module provides package management support for FreeBSD and the new pw_user and pw_group provide user and group management.

Module and State Additions

Cron Support

Support for managing the system crontab has been added, declaring a cron state can be done easily:

```bash
date > /tmp/datestamp:
cron:
  - present
  - user: fred
  - minute: 5
  - hour: 3
```

File State Additions

The file state has been given a number of new features, primarily the directory, recurse, symlink, and absent functions.

**file.directory**  Make sure that a directory exists and has the right permissions.

```bash
/srv/foo:
  file:
    - directory
    - user: root
    - group: root
    - mode: 1755
```

**file.symlink**  Make a symlink.

```bash
/var/lib/www:
  file:
    - symlink
    - target: /srv/www
    - force: True
```

**file.recurse**  The recurse state function will recursively download a directory on the master file server and place it on the minion. Any change in the files on the master will be pushed to the minion. The recurse function is very powerful and has been tested by pushing out the full Linux kernel source.

```bash
/opt/code:
  file:
    - recurse
    - source: salt://linux
```

**file.absent**  Make sure that the file is not on the system, recursively deletes directories, files, and symlinks.
Sysctl Module and State

The sysctl module and state allows for sysctl components in the kernel to be managed easily. The sysctl module contains the following functions:

- `sysctl.show` Return a list of sysctl parameters for this minion
- `sysctl.get` Return a single sysctl parameter for this minion
- `sysctl.assign` Assign a single sysctl parameter for this minion
- `sysctl.persist` Assign and persist a simple sysctl parameter for this minion

The sysctl state allows for sysctl parameters to be assigned:

```
vm.swappiness:
    sysctl:
        - present
        - value: 20
```

Kernel Module Management

A module for managing Linux kernel modules has been added. The new functions are as follows:

- `kmod.available` Return a list of all available kernel modules
- `kmod.check_available` Check to see if the specified kernel module is available
- `kmod.lsmod` Return a dict containing information about currently loaded modules
- `kmod.load` Load the specified kernel module
- `kmod.remove` Unload the specified kernel module

The kmod state can enforce modules be either present or absent:

```
kvm_intel:
    kmod:
        - present
```

Ssh Authorized Keys

The ssh_auth state can distribute ssh authorized keys out to minions. Ssh authorized keys can be present or absent.

```AAAAB3NzaC1kc3MAAAACBAL0sQ9fJ5byTEyYv1RLBsdD0o49CnhlWHWXQRquL6rwL4KIuPrhY7hBw0tV7UNC7J93ZRN04iGod9C+Qn5r3x/Pv2v/k74CARJKq+XyNyLrkaJQAgAAAQD9d4jp2dCJSIseSkk4Lez3LqFcqQAAAIAmovHIVSrbLbXAXQE8eyPoL9x5C+x2GRpEcA7AeMH6bGx/I/jYAbd1PXNuclJHOKL27QZCRFjWSEaSrUOoczvAAAAFQD9d4jp2dCJSIseSkk4Lez3LqFcqQAAAIAmovHIVSrbLbXAXQE8eyPoL9x5C+x2GRpEcA7AeMH6bGx/I/jYAbd1PXNuclJHOKL27QZCRFjWSEaSrUOoczvAAAAFQD9d4jp2dCJSIseSkk4Lez3LqFcqQAAAIAmovHIVSrbLbXAXQE8eyPoL9x5C+x2GRpEcA7AeMH6bGx/I/jYAbd1PXNuclJHOKL27QZCRFjWSEaSrUOoczvAAAAFQ`
```

```
ssh_auth:
    - present
    - user: frank
    - enc: dsa
    - comment: 'Frank's key'
```

37.2. Previous Releases 2585
37.2.89 Salt 0.9.4 Release Notes

release 2011-11-27

Salt 0.9.4 has arrived. This is a critical update that repairs a number of key bugs found in 0.9.3. But this update is
not without feature additions as well! 0.9.4 adds support for Gentoo portage to the pkg module and state system.
Also there are 2 major new state additions, the failhard option and the ability to set up finite state ordering with the
order option.

This release also sees our largest increase in community contributions. These contributors have and continue to be
the life blood of the Salt project, and the team continues to grow. I want to put out a big thanks to our new and
existing contributors.

Download!

The Salt source can be downloaded from the salt GitHub site:
https://cloud.github.com/downloads/saltstack/salt/salt-0.9.4.tar.gz
Or from PyPI:
https://pypi.python.org/packages/source/s/salt/salt-0.9.4.tar.gz
For instructions on how to set up Salt please see the Installation instructions.

New Features

Failhard State Option

Normally, when a state fails Salt continues to execute the remainder of the defined states and will only refuse to
execute states that require the failed state.

But the situation may exist, where you would want all state execution to stop if a single state execution fails. The
capability to do this is called failing hard.

State Level Failhard

A single state can have a failhard set, this means that if this individual state fails that all state execution will immedi-
ately stop. This is a great thing to do if there is a state that sets up a critical config file and setting a require for each
state that reads the config would be cumbersome. A good example of this would be setting up a package manager
early on:

```
/etc/yum.repos.d/company.repo:
  file:
    - managed
    - source: salt://company/yumrepo.conf
    - user: root
    - group: root
    - mode: 644
    - order: 1
    - failhard: True
```
In this situation, the yum repo is going to be configured before other states, and if it fails to lay down the config file, then no other states will be executed.

**Global Failhard**

It may be desired to have failhard be applied to every state that is executed, if this is the case, then failhard can be set in the master configuration file. Setting failhard in the master configuration file will result in failing hard when any minion gathering states from the master have a state fail.

This is NOT the default behavior, normally Salt will only fail states that require a failed state.

Using the global failhard is generally not recommended, since it can result in states not being executed or even checked. It can also be confusing to see states failhard if an admin is not actively aware that the failhard has been set.

To use the global failhard set failhard: True in the master configuration

**Finite Ordering of State Execution**

When creating salt sls files, it is often important to ensure that they run in a specific order. While states will always execute in the same order, that order is not necessarily defined the way you want it.

A few tools exist in Salt to set up the correct state ordering, these tools consist of requisite declarations and order options.

**The Order Option**

Before using the order option, remember that the majority of state ordering should be done with requisite statements, and that a requisite statement will override an order option.

The order option is used by adding an order number to a state declaration with the option `order`:

```yaml
vim:
  pkg:
    - installed
    - order: 1
```

By adding the order option to 1 this ensures that the vim package will be installed in tandem with any other state declaration set to the order 1.

Any state declared without an order option will be executed after all states with order options are executed.

But this construct can only handle ordering states from the beginning. Sometimes you may want to send a state to the end of the line, to do this set the order to last:

```yaml
vim:
  pkg:
    - installed
    - order: last
```

Substantial testing has gone into the state system and it is ready for real world usage. A great deal has been added to the documentation for states and the modules and functions available to states have been cleanly documented.

A number of State System bugs have also been founds and repaired, the output from the state system has also been refined to be extremely clear and concise.
Error reporting has also been introduced, issues found in sls files will now be clearly reported when executing Salt States.

**Gentoo Support**

Additional experimental support has been added for Gentoo. This is found in the contribution from Doug Renn, aka nestegg.

### 37.2.90 Salt 0.9.5 Release Notes

**release** 2012-01-15

Salt 0.9.5 is one of the largest steps forward in the development of Salt. 0.9.5 comes with many milestones, this release has seen the community of developers grow out to an international team of 46 code contributors and has many feature additions, feature enhancements, bug fixes and speed improvements.

**Warning:** Be sure to *read the upgrade instructions* about the switch to msgpack before upgrading!

**Community**

Nothing has proven to have more value to the development of Salt that the outstanding community that has been growing at such a great pace around Salt. This has proven not only that Salt has great value, but also the expandability of Salt is as exponential as I originally intended.

0.9.5 has received over 600 additional commits since 0.9.4 with a swath of new committers. The following individuals have contributed to the development of 0.9.5:

- Aaron Bull Schaefer
- Antti Kaihola
- Bas Tichelaar
- Brad Barden
- Brian Wagner
- Byron Clark
- Chris Scheller
- Christer Edwards
- Clint Savage
- Corey Quinn
- David Boucha
- Eivind Uggedal
- Eric Poelke
- Evan Borgstrom
- Jed Glazner
This makes 21 new developers since 0.9.4 was released!

To keep up with the growing community follow Salt on Ohloh (http://www.ohloh.net/p/salt), to join the Salt development community, fork Salt on GitHub, and get coding (https://github.com/saltstack/salt)!

**Major Features**

**SPEED! Pickle to msgpack**

For a few months now we have been talking about moving away from Python pickles for network serialization, but a preferred serialization format had not yet been found. After an extensive performance testing period involving everything from JSON to protocol buffers, a clear winner emerged. Message Pack (http://msgpack.org/) proved to not only be the fastest and most compact, but also the most `salt like`. Message Pack is simple, and the code involved is very small. The msgpack library for Python has been added directly to Salt.

This move introduces a few changes to Salt. First off, Salt is no longer a `noarch` package, since the msgpack lib is written in C. Salt 0.9.5 will also have compatibility issues with 0.9.4 with the default configuration.

We have gone through great lengths to avoid backwards compatibility issues with Salt, but changing the serialization medium was going to create issues regardless. Salt 0.9.5 is somewhat backwards compatible with earlier minions. A 0.9.5 master can command older minions, but only if the `serial` config value in the master is set to `pickle`. This will tell the master to publish messages in pickle format and will allow the master to receive messages in both msgpack and pickle formats.

Therefore the **suggested methods for upgrading** are either to just upgrade everything at once, or:

1. Upgrade the master to 0.9.5
2. Set `serial` to `pickle` in the master config
3. Upgrade the minions
4. Remove the `serial` option from the master config

Since pickles can be used as a security exploit the ability for a master to accept pickles from minions at all will be removed in a future release.
C Bindings for YAML

All of the YAML rendering is now done with the YAML C bindings. This speeds up all of the sls files when running states.

Experimental Windows Support

David Boucha has worked tirelessly to bring initial support to Salt for Microsoft Windows operating systems. Right now the Salt Minion can run as a native Windows service and accept commands.

In the weeks and months to come Windows will receive the full treatment and will have support for Salt States and more robust support for managing Windows systems. This is a big step forward for Salt to move entirely outside of the Unix world, and proves Salt is a viable cross platform solution. Big Thanks to Dave for his contribution here!

Dynamic Module Distribution

Many Salt users have expressed the desire to have Salt distribute in-house modules, states, renderers, returners, and grains. This support has been added in a number of ways:

Modules via States

Now when salt modules are deployed to a minion via the state system as a file, then the modules will be automatically loaded into the active running minion - no restart required - and into the active running state. So custom state modules can be deployed and used in the same state run.

Modules via Module Environment Directories

Under the file_roots each environment can now have directories that are used to deploy large groups of modules. These directories sync modules at the beginning of a state run on the minion, or can be manually synced via the Salt module `salt.modules.saltutil.sync_all`.

The directories are named:

- `_modules`
- `_states`
- `_grains`
- `_renderers`
- `_returners`

The modules are pushed to their respective scopes on the minions.

Module Reloading

Modules can now be reloaded without restarting the minion, this is done by calling the `salt.modules.sys.reload_modules` function.

But wait, there's more! Now when a salt module of any type is added via states the modules will be automatically reloaded, allowing for modules to be laid down with states and then immediately used.

Finally, all modules are reloaded when modules are dynamically distributed from the salt master.
Enable / Disable Added to Service

A great deal of demand has existed for adding the capability to set services to be started at boot in the service module. This feature also comes with an overhaul of the service modules and initial systemd support.

This means that the service state can now accept `-enable: True` to make sure a service is enabled at boot, and `-enable: False` to make sure it is disabled.

Compound Target

A new target type has been added to the lineup, the compound target. In previous versions the desired minions could only be targeted via a single specific target type, but now many target specifications can be declared.

These targets can also be separated by and/or operators, so certain properties can be used to omit a node:

```
salt -C 'webserv* and G@os:Debian or E@db.*' test.ping
```

will match all minions with ids starting with webserv via a glob and minions matching the `os:Debian` grain. Or minions that match the `db.*` regular expression.

Node Groups

Often the convenience of having a predefined group of minions to execute targets on is desired. This can be accomplished with the new nodegroups feature. Nodegroups allow for predefined compound targets to be declared in the master configuration file:

```
nodegroups:
  group1: 'L@foo.domain.com,bar.domain.com,baz.domain.com and bl*.domain.com'
  group2: 'G@os:Debian and foo.domain.com'
```

And then used via the `-N` option:

```
salt -N group1 test.ping
```

Minion Side Data Store

The data module introduces the initial approach into storing persistent data on the minions, specific to the minions. This allows for data to be stored on minions that can be accessed from the master or from the minion.

The Minion datastore is young, and will eventually provide an interface similar to a more mature key/value pair server.

Major Grains Improvement

The Salt grains have been overhauled to include a massive amount of extra data. This includes hardware data, os data and salt specific data.

Salt -Q is Useful Now

In the past the salt query system, which would display the data from recent executions would be displayed in pure Python, and it was unreadable.
0.9.5 has added the outputter system to the -Q option, thus enabling the salt query system to return readable output.

**Packaging Updates**

Huge strides have been made in packaging Salt for distributions. These additions are thanks to our wonderful community where the work to set up packages has proceeded tirelessly.

**FreeBSD**

Salt on FreeBSD? There a port for that:

http://svnweb.freebsd.org/ports/head/sysutils/py-salt/

This port was developed and added by Christer Edwards. This also marks the first time Salt has been included in an upstream packaging system!

**Fedora and Red Hat Enterprise**

Salt packages have been prepared for inclusion in the Fedora Project and in EPEL for Red Hat Enterprise 5 and 6. These packages are the result of the efforts made by Clint Savage (herlo).

**Debian/Ubuntu**

A team of many contributors have assisted in developing packages for Debian and Ubuntu. Salt is still actively seeking inclusion in upstream Debian and Ubuntu and the package data that has been prepared is being pushed through the needed channels for inclusion.

These packages have been prepared with the help of:

- Corey
- Aaron Toponce
- and’

**More to Come**

We are actively seeking inclusion in more distributions. Primarily getting Salt into Gentoo, SUSE, OpenBSD, and preparing Solaris support are all turning into higher priorities.

**Refinement**

Salt continues to be refined into a faster, more stable and more usable application. 0.9.5 comes with more debug logging, more bug fixes and more complete support.

**More Testing, More BugFixes**

0.9.5 comes with more bugfixes due to more testing than any previous release. The growing community and the introduction a a dedicated QA environment have unearthed many issues that were hiding under the covers. This has further refined and cleaned the state interface, taking care of things from minor visual issues to repairing misleading data.
Custom Exceptions

A custom exception module has been added to throw salt specific exceptions. This allows Salt to give much more granular error information.

New Modules

data

The new data module manages a persistent datastore on the minion. Big thanks to bastichelaar for his help refining this module.

freebsdkmod

FreeBSD kernel modules can now be managed in the same way Salt handles Linux kernel modules. This module was contributed thanks to the efforts of Christer Edwards.

gentoo_service

Support has been added for managing services in Gentoo. Now Gentoo services can be started, stopped, restarted, enabled, disabled, and viewed.

pip

The pip module introduces management for pip installed applications. Thanks goes to whitinge for the addition of the pip module.

rh_service

The rh_service module enables Red Hat and Fedora specific service management. Now Red Hat like systems come with extensive management of the classic init system used by Red Hat.

saltutil

The saltutil module has been added as a place to hold functions used in the maintenance and management of salt itself. Saltutil is used to salt the salt minion. The saltutil module is presently used only to sync extension modules from the master server.

systemd

Systemd support has been added to Salt, now systems using this next generation init system are supported on systems running systemd.
**virtualenv**

The virtualenv module has been added to allow salt to create virtual Python environments. Thanks goes to whitinge for the addition of the virtualenv module.

**win_disk**

Support for gathering disk information on Microsoft Windows minions. The windows modules come courtesy of Utah_Dave.

**win_service**

The win_service module adds service support to Salt for Microsoft Windows services.

**win_useradd**

Salt can now manage local users on Microsoft Windows Systems.

**yumpkg5**

The yumpkg module introduces in 0.9.4 uses the yum API to interact with the yum package manager. Unfortunately, on Red Hat 5 systems salt does not have access to the yum API because the yum API is running under Python 2.4 and Salt needs to run under Python 2.6.

The yumpkg5 module bypasses this issue by shelling out to yum on systems where the yum API is not available.

**New States**

**mysql_database**

The new mysql_database state adds the ability to systems running a mysql server to manage the existence of mysql databases.

The mysql states are thanks to syphernl.

**mysql_user**

The mysql_user state enables mysql user management.

**virtualenv**

The virtualenv state can manage the state of Python virtual environments. Thanks to Whitinge for the virtualenv state.
New Returners

**cassandra_returner**

A returner allowing Salt to send data to a cassandra server. Thanks to Byron Clark for contributing this returner.

### 37.2.91 Salt 0.9.6 Release Notes

**release** 2012-01-21

Salt 0.9.6 is a release targeting a few bugs and changes. This is primarily targeting an issue found in the names declaration in the state system. But a few other bugs were also repaired, like missing support for grains in extmods. Due to a conflict in distribution packaging msgpack will no longer be bundled with Salt, and is required as a dependency.

**New Features**

**HTTP and ftp support in files.managed**

Now under the source option in the file.managed state a HTTP or ftp address can be used instead of a file located on the salt master.

**Allow Multiple Returners**

Now the returner interface can define multiple returners, and will also return data back to the master, making the process less ambiguous.

**Minion Memory Improvements**

A number of modules have been taken out of the minion if the underlying systems required by said modules are not present on the minion system. A number of other modules need to be stripped out in this same way which should continue to make the minion more efficient.

**Minions Can Locally Cache Return Data**

A new option, cache_jobs, has been added to the minion to allow for all of the historically run jobs to cache on the minion, allowing for looking up historic returns. By default cache_jobs is set to False.

**Pure Python Template Support For file.managed**

Templates in the file.managed state can now be defined in a Python script. This script needs to have a run function that returns the string that needs to be in the named file.
37.2.92 Salt 0.9.7 Release Notes

Salt 0.9.7 is here! The latest iteration of Salt brings more features and many fixes. This release is a great refinement over 0.9.6, adding many conveniences under the hood, as well as some features that make working with Salt much better.

A few highlights include the new Job system, refinements to the requisite system in states, the mod_init interface for states, external node classification, search path to managed files in the file state, and refinements and additions to dynamic module loading.

0.9.7 also introduces the long developed (and oft changed) unit test framework and the initial unit tests.

Major Features

Salt Jobs Interface

The new jobs interface makes the management of running executions much cleaner and more transparent. Building on the existing execution framework the jobs system allows clear introspection into the active running state of the running Salt interface.

The Jobs interface is centered in the new minion side proc system. The minions now store msgpack serialized files under /var/cache/salt/proc. These files keep track of the active state of processes on the minion.

Functions in the saltutil Module

A number of functions have been added to the saltutil module to manage and view the jobs:

running - Returns the data of all running jobs that are found in the proc directory.

find_job - Returns specific data about a certain job based on job id.

signal_job - Allows for a given jid to be sent a signal.

term_job - Sends a termination signal (SIGTERM, 15) to the process controlling the specified job.

kill_job - Sends a kill signal (SIGKILL, 9) to the process controlling the specified job.

The Jobs Runner

A convenience runner front end and reporting system has been added as well. The jobs runner contains functions to make viewing data easier and cleaner.

The jobs runner contains a number of functions...

active

The active function runs saltutil.running on all minions and formats the return data about all running jobs in a much more usable and compact format. The active function will also compare jobs that have returned and jobs that are still running, making it easier to see what systems have completed a job and what systems are still being waited on.
lookup_jid

When jobs are executed the return data is sent back to the master and cached. By default it is cached for 24 hours, but this can be configured via the keep_jobs option in the master configuration.

Using the lookup_jid runner will display the same return data that the initial job invocation with the salt command would display.

list_jobs

Before finding a historic job, it may be required to find the job id. list_jobs will parse the cached execution data and display all of the job data for jobs that have already, or partially returned.

External Node Classification

Salt can now use external node classifiers like Cobbler's cobbler-ext-nodes.

Salt uses specific data from the external node classifier. In particular the classes value denotes which sls modules to run, and the environment value sets to another environment.

An external node classification can be set in the master configuration file via the external_nodes option: http://salt.readthedocs.org/en/latest/ref/configuration/master.html#external-nodes

External nodes are loaded in addition to the top files. If it is intended to only use external nodes, do not deploy any top files.

State Mod Init System

An issue arose with the pkg state. Every time a package was run Salt would need to refresh the package database. This made systems with slower package metadata refresh speeds much slower to work with. To alleviate this issue the mod_init interface has been added to salt states.

The mod_init interface is a function that can be added to a state file. This function is called with the first state called. In the case of the pkg state, the mod_init function sets up a tag which makes the package database only refresh on the first attempt to install a package.

In a nutshell, the mod_init interface allows a state to run any command that only needs to be run once, or can be used to set up an environment for working with the state.

Source File Search Path

The file state continues to be refined, adding speed and capabilities. This release adds the ability to pass a list to the source option. This list is then iterated over until the source file is found, and the first found file is used.

The new syntax looks like this:

```
/etc/httpd/conf/httpd.conf:
  file:
    - managed
    - source:
      - salt://httpd/httpd.conf
      - http://myserver/httpd.conf: md5=8c1fe119e6f1fd96bc06614473509bf1
```
The source option can take sources in the list from the salt file server as well as an arbitrary web source. If using an arbitrary web source the checksum needs to be passed as well for file verification.

**Refinements to the Requisite System**

A few discrepancies were still lingering in the requisite system, in particular, it was not possible to have a `require` and a `watch` requisite declared in the same state declaration.

This issue has been alleviated, as well as making the requisite system run more quickly.

**Initial Unit Testing Framework**

Because of the module system, and the need to test real scenarios, the development of a viable unit testing system has been difficult, but unit testing has finally arrived. Only a small amount of unit testing coverage has been developed, much more coverage will be in place soon.

A huge thanks goes out to those who have helped with unit testing, and the contributions that have been made to get us where we are. Without these contributions unit tests would still be in the dark.

**Compound Targets Expanded**

Originally only support for `and` and `or` were available in the compound target. 0.9.7 adds the capability to negate compound targets with `not`.

**Nodegroups in the Top File**

Previously the nodegroups defined in the master configuration file could not be used to match nodes for states. The nodegroups support has been expanded and the nodegroups defined in the master configuration can now be used to match minions in the top file.

**37.2.93 Salt 0.9.8 Release Notes**

Salt 0.9.8 is a big step forward, with many additions and enhancements, as well as a number of precursors to advanced future developments.

This version of Salt adds much more power to the command line, making the old hard timeout issues a thing of the past and adds keyword argument support. These additions are also available in the salt client API, making the available API tools much more powerful.

The new pillar system allows for data to be stored on the master and assigned to minions in a granular way similar to the state system. It also allows flexibility for users who want to keep data out of their state tree similar to `external lookup` functionality in other tools.

A new way to extend requisites was added, the `require in` statement. This makes adding requires or watch statements to external state decs much easier.

Additions to requisites making them much more powerful have been added as well as improved error checking for sls files in the state system. A new provider system has been added to allow for redirecting what modules run in the background for individual states.
Support for OpenSUSE has been added and support for Solaris has begun serious development. Windows support has been significantly enhanced as well.

The matcher and target systems have received a great deal of attention. The default behavior of grain matching has changed slightly to reflect the rest of salt and the compound matcher system has been refined.

A number of impressive features with keyword arguments have been added to both the CLI and to the state system. This makes states much more powerful and flexible while maintaining the simple configuration everyone loves.

The new batch size capability allows for executions to be rolled through a group of targeted minions a percentage or specific number at a time. This was added to prevent the “thundering herd” problem when targeting large numbers of minions for things like service restarts or file downloads.

### Upgrade Considerations

#### Upgrade Issues

There was a previously missed oversight which could cause a newer minion to crash an older master. That oversight has been resolved so the version incompatibility issue will no longer occur. When upgrading to 0.9.8 make sure to upgrade the master first, followed by the minions.

#### Debian/Ubuntu Packages

The original Debian/Ubuntu packages were called salt and included all salt applications. New packages in the ppa are split by function. If an old salt package is installed then it should be manually removed and the new split packages need to be freshly installed.

On the master:

```
# apt-get purge salt
# apt-get install salt-{master,minion}
```

On the minions:

```
# apt-get purge salt
# apt-get install salt-minion
```

And on any Syndics:

```
# apt-get install salt-syndic
```

The official Salt PPA for Ubuntu is located at: https://launchpad.net/~saltstack/+archive/salt

#### Major Features

##### Pillar

*Pillar* offers an interface to declare variable data on the master that is then assigned to the minions. The pillar data is made available to all modules, states, sls files etc. It is compiled on the master and is declared using the existing renderer system. This means that learning pillar should be fairly trivial to those already familiar with salt states.
CLI Additions

The `salt` command has received a serious overhaul and is more powerful than ever. Data is returned to the terminal as it is received, and the salt command will now wait for all running minions to return data before stopping. This makes adding very large `--timeout` arguments completely unnecessary and gets rid of long running operations returning empty `{}` when the timeout is exceeded.

When calling salt via sudo, the user originally running salt is saved to the log for auditing purposes. This makes it easy to see who ran what by just looking through the minion logs.

The `salt-key` command gained the `-D` and `--delete-all` arguments for removing all keys. Be careful with this one!

Running States Without a Master

The addition of running states without a salt-master has been added to 0.9.8. This feature allows for the unmodified salt state tree to be read locally from a minion. The result is that the UNMODIFIED state tree has just become portable, allowing minions to have a local copy of states or to manage states without a master entirely.

This is accomplished via the new file client interface in Salt that allows for the `salt://` URI to be redirected to custom interfaces. This means that there are now two interfaces for the salt file server, calling the master or looking in a local, minion defined `file_roots`.

This new feature can be used by modifying the minion config to point to a local `file_roots` and setting the `file_client` option to `local`.

Keyword Arguments and States

State modules now accept the `**kwargs` argument. This results in all data in a sls file assigned to a state being made available to the state function.

This passes data in a transparent way back to the modules executing the logic. In particular, this allows adding arguments to the `pkg.install` module that enable more advanced and granular controls with respect to what the state is capable of.

An example of this along with the new debconf module for installing ldap client packages on Debian:

```
ldap-client-packages:
pkg:
  - debconf: salt://debconf/ldap-client.ans
  - installed
  - names:
    - nslcd
    - libpam-ldapd
    - libnss-ldapd
```

Keyword Arguments and the CLI

In the past it was required that all arguments be passed in the proper order to the `salt` and `salt-call` commands. As of 0.9.8, keyword arguments can be passed in the form of `kword=argument`.

```
# salt -G 'type:dev' git.clone \
    repository=https://github.com/saltstack/salt.git cwd=/tmp/salt user=jeff
```
Matcher Refinements and Changes

A number of fixes and changes have been applied to the Matcher system. The most noteworthy is the change in the grain matcher. The grain matcher used to use a regular expression to match the passed data to a grain, but now defaults to a shell glob like the majority of match interfaces in Salt. A new option is available that still uses the old style regex matching to grain data called `grain-pcre`. To use regex matching in compound matches use the letter `P`.

For example, this would match any ArchLinux or Fedora minions:

```
# salt --grain-pcre 'os:(Arch:Fed).*' test.ping
```

And the associated compound matcher suitable for `top.sls` is `P`:

```
P@os:(Arch|Fed).*
```

**NOTE**: Changing the grains matcher from pcre to glob is backwards incompatible.

Support has been added for matching minions with Yahoo’s range library. This is handled by passing range syntax with `-R` or `--range` arguments to salt.

More information at: https://github.com/ytoolshed/range/wiki/%22yamlfile%22-module-file-spec

Requisite "in"

A new means to updating requisite statements has been added to make adding watchers and requires to external states easier. Before 0.9.8 the only way to extend the states that were watched by a state outside of the sls was to use an extend statement:

```
include:
  - http
extend:
  apache:
    service:
      - watch:
        - pkg: tomcat

  tomcat:
    pkg:
      - installed
```

But the new `Requisite in` statement allows for easier extends for requisites:

```
include:
  - http

  tomcat:
    pkg:
      - installed
      - watch_in:
        - service: apache
```

Requisite in is part of the extend system, so still remember to always include the sls that is being extended!
Providers

Salt predetermines what modules should be mapped to what uses based on the properties of a system. These determinations are generally made for modules that provide things like package and service management. The apt module maps to pkg on Debian and the yum module maps to pkg on Fedora for instance.

Sometimes in states, it may be necessary for a non-default module to be used for the desired functionality. For instance, an Arch Linux system may have been set up with systemd support. Instead of using the default service module detected for Arch Linux, the systemd module can be used:

```
http:
  service:
    - running
    - enable: True
    - provider: systemd
```

Default providers can also be defined in the minion config file:

```
providers:
  service: systemd
```

When default providers are passed in the minion config, then those providers will be applied to all functionality in Salt, this means that the functions called by the minion will use these modules, as well as states.

Requisite Glob Matching

Requisites can now be defined with glob expansion. This means that if there are many requisites, they can be defined on a single line.

To watch all files in a directory:

```
http:
  service:
    - running
    - enable: True
    - watch:
      - file: /etc/http/conf.d/*
```

This example will watch all defined files that match the glob /etc/http/conf.d/*

Batch Size

The new batch size option allows commands to be executed while maintaining that only so many hosts are executing the command at one time. This option can take a percentage or a finite number:

```
salt '*' -b 10 test.ping
salt -G 'os:RedHat' --batch-size 25% apache.signal restart
```

This will only run test.ping on 10 of the targeted minions at a time and then restart apache on 25% of the minions matching os:RedHat at a time and work through them all until the task is complete. This makes jobs like rolling web server restarts behind a load balancer or doing maintenance on BSD firewalls using carp much easier with salt.
Module Updates

This is a list of notable, but non-exhaustive updates with new and existing modules.

Windows support has seen a flurry of support this release cycle. We've gained all new file, network, and shadow modules. Please note that these are still a work in progress.

For our ruby users, new rvm and gem modules have been added along with the associated states.

The virt module gained basic Xen support.

The yum module gained Scientific Linux support.

The pkg module on Debian, Ubuntu, and derivatives force apt to run in a non-interactive mode. This prevents issues when package installation waits for confirmation.

A pkg module for OpenSUSE’s zypper was added.

The service module on Ubuntu natively supports upstart.

A new debconf module was contributed by our community for more advanced control over deb package deployments on Debian based distributions.

The mysql.user state and mysql module gained a password_hash argument.

The cmd module and state gained a shell keyword argument for specifying a shell other than /bin/sh on Linux / Unix systems.

New git and mercurial modules have been added for fans of distributed version control.

In Progress Development

Master Side State Compiling

While we feel strongly that the advantages gained with minion side state compiling are very critical, it does prevent certain features that may be desired. 0.9.8 has support for initial master side state compiling, but many more components still need to be developed, it is hoped that these can be finished for 0.9.9.

The goal is that states can be compiled on both the master and the minion allowing for compilation to be split between master and minion. Why will this be great? It will allow storing sensitive data on the master and sending it to some minions without all minions having access to it. This will be good for handling ssl certificates on front-end web servers for instance.

Solaris Support

Salt 0.9.8 sees the introduction of basic Solaris support. The daemon runs well, but grains and more of the modules need updating and testing.

Windows Support

Salt states on windows are now much more viable thanks to contributions from our community! States for file, service, local user, and local group management are more fully fleshed out along with network and disk modules. Windows users can also now manage registry entries using the new `reg` module.
37.2.94 Salt 0.9.9 Release Notes

release 2012-04-27

0.9.9 is out and comes with some serious bug fixes and even more serious features. This release is the last major feature release before 1.0.0 and could be considered the 1.0.0 release candidate.

A few updates include more advanced kwargs support, the ability for salt states to more safely configure a running salt minion, better job directory management and the new state test interface.

Many new tests have been added as well, including the new minion swarm test that allows for easier testing of Salt working with large groups of minions. This means that if you have experienced stability issues with Salt before, particularly in larger deployments, that these bugs have been tested for, found, and killed.

Major Features

State Test Interface

Until 0.9.9 the only option when running states to see what was going to be changed was to print out the highstate with state.show_highstate and manually look it over. But now states can be run to discover what is going to be changed.

Passing the option test=True to many of the state functions will now cause the salt state system to only check for what is going to be changed and report on those changes.

```
salt '*' state.highstate test=True
```

Now states that would have made changes report them back in yellow.

State Syntax Update

A shorthand syntax has been added to sls files, and it will be the default syntax in documentation going forward. The old syntax is still fully supported and will not be deprecated, but it is recommended to move to the new syntax in the future. This change moves the state function up into the state name using a dot notation. This is in-line with how state functions are generally referred to as well:

The new way:

```
/etc/sudoers:
  file.present:
    - source: salt://sudo/sudoers
    - user: root
    - mode: 400
```

Use and Use_in Requisites

Two new requisite statements are available in 0.9.9. The use and use_in requisite and requisite-in allow for the transparent duplication of data between states. When a state “uses” another state it copies the other state’s arguments as defaults. This was created in direct response to the new network state, and allows for many network interfaces to be configured in the same way easily. A simple example:

```
root_file:
  file.absent:
    - name: /tmp/nothing
```
This makes the 2 lower state decs inherit the options from their respectively ``used'' state decs.

**Network State**

The new network state allows for the configuration of network devices via salt states and the ip salt module. This addition has been given to the project by Jeff Hutchins and Bret Palsson from Jive Communications.

Currently the only network configuration backend available is for Red Hat based systems, like Red Hat Enterprise, CentOS, and Fedora.

**Exponential Jobs**

Originally the jobs executed were stored on the master in the format: `<cachedir>/jobs/jid/{minion ids}` But this format restricted the number of jobs in the cache to the number of subdirectories allowed on the filesystem. Ext3 for instance limits subdirectories to 32000. To combat this the new format for 0.9.9 is: `<cachedir>/jobs/jid_hash[:2]/jid_hash[2:]/{minion ids}` So that now the number of maximum jobs that can be run before the cleanup cycle hits the job directory is substantially higher.

**ssh_auth Additions**

The original ssh_auth state was limited to accepting only arguments to apply to a public key, and the key itself. This was restrictive due to the way the we learned that many people were using the state, so the key section has been expanded to accept options and arguments to the key that over ride arguments passed in the state. This gives substantial power to using ssh_auth with names:
LocalClient Additions

To follow up the recent additions in 0.9.8 of additional kwargs support, 0.9.9 also adds the capability to send kwargs into commands via a dict. This addition to the LocalClient api can be used like so:

```python
import salt.client

client = salt.client.LocalClient('/etc/salt/master')
ret = client.cmd('*','cmd.run', ['ls -l'], kwarg={'cwd': '/etc'})
```

This update has been added to all cmd methods in the LocalClient class.

Better Self Salting

One problem faced with running Salt states, is that it has been difficult to manage the Salt minion via states, this is due to the fact that if the minion is called to restart while a state run is happening then the state run would be killed. 0.9.9 slightly changes the process scope of the state runs, so now when salt is executing states it can safely restart the salt-minion daemon.

In addition to daemonizing the state run, the apt module also daemonizes. This update makes it possible to cleanly update the salt-minion package on Debian/Ubuntu systems without leaving apt in an inconsistent state or killing
the active minion process mid-execution.

**Wildcards for SLS Modules**

Now, when including sls modules in include statements or in the top file, shell globs can be used. This can greatly simplify listing matched sls modules in the top file and include statements:

```yaml
base:
  '*':
    - files*
    - core*

include:
  - users.dev.*
  - apache.ser*
```

**External Pillar**

Since the pillar data is just, data, it does not need to come expressly from the pillar interface. The external pillar system allows for hooks to be added making it possible to extract pillar data from any arbitrary external interface. The external pillar interface is configured via the `ext_pillar` option. Currently interfaces exist to gather external pillar data via hiera or via a shell command that sends yaml data to the terminal:

```yaml
ext_pillar:
  - cmd_yaml: cat /etc/salt/ext.yaml
  - hiera: /etc/hiera.yaml
```

The initial external pillar interfaces and extra interfaces can be added to the file salt/pillar.py, it is planned to add more external pillar interfaces. If the need arises a new module loader interface will be created in the future to manage external pillar interfaces.

**Single State Executions**

The new state.single function allows for single states to be cleanly executed. This is a great tool for setting up a small group of states on a system or for testing out the behavior of single states:

```bash
salt '*' state.single user.present name=wade uid=2000
```

The test interface functions here as well, so changes can also be tested against as:

```bash
salt '*' state.single user.present name=wade uid=2000 test=True
```

**New Tests**

A few exciting new test interfaces have been added, the minion swarm allows not only testing of larger loads, but also allows users to see how Salt behaves with large groups of minions without having to create a large deployment.
Minion Swarm

The minion swarm test system allows for large groups of minions to be tested against easily without requiring large numbers of servers or virtual machines. The minion swarm creates as many minions as a system can handle and roots them in the /tmp directory and connects them to a master.

The benefit here is that we were able to replicate issues that happen only when there are large numbers of minions. A number of elusive bugs which were causing stability issues in masters and minions have since been hunted down. Bugs that used to take careful watch by users over several days can now be reliably replicated in minutes, and fixed in minutes.

Using the swarm is easy, make sure a master is up for the swarm to connect to, and then use the minionswarm.py script in the tests directory to spin up as many minions as you want. Remember, this is a fork bomb, don’t spin up more than your hardware can handle!

```
python minionswarm.py -m 20 --master salt-master
```

Shell Tests

The new Shell testing system allows us to test the behavior of commands executed from a high level. This allows for the high level testing of salt runners and commands like salt-key.

Client Tests

Tests have been added to test the aspects of the client APIs and ensure that the client calls work, and that they manage passed data, in a desirable way.

Salt Community Projects

This page contains links to Salt-related projects created by community members. If you come across a useful project please add it to the list!

### 38.1 Hubblestack

Hubble is a modular, open-source security compliance framework built on top of SaltStack. The project provides on-demand profile-based auditing, real-time security event notifications, automated remediation, alerting and reporting.

http://hubblestack.io/

### 38.2 alkali

alkali is a collections of SaltStack states and pillar data that provide just the basics for provisioning Linux instances that may be built upon. alkali is a starter kit of sorts, to help new users to SaltStack get up-and-running quickly with the most commonly used, core packages.

https://github.com/zulily/alkali

### 38.3 buoyant

buoyant leverages docker to provide an alternative to VM-centric SaltStack development environments. buoyant containers may be spun up nearly instantly, once an initial docker image has been built.

https://github.com/zulily/buoyant

### 38.4 Salt Sandbox

Salt Sandbox is a multi-VM Vagrant-based Salt development environment used for creating and testing new Salt state modules outside of your production environment. It’s also a great way to learn firsthand about Salt and its remote execution capabilities.

https://github.com/elasticdog/salt-sandbox
38.5 Salt Vagrant Demo

A Salt Demo using Vagrant.

https://github.com/UtahDave/salt-vagrant-demo

-----END PGP PUBLIC KEY BLOCK-----
The SaltStack Security Team is available at security@saltstack.com for security-related bug reports or questions.

We request the disclosure of any security-related bugs or issues be reported non-publicly until such time as the issue can be resolved and a security-fix release can be prepared. At that time we will release the fix and make a public announcement with upgrade instructions and download locations.

39.1 Security response procedure

SaltStack takes security and the trust of our customers and users very seriously. Our disclosure policy is intended to resolve security issues as quickly and safely as is possible.

1. A security report sent to security@saltstack.com is assigned to a team member. This person is the primary contact for questions and will coordinate the fix, release, and announcement.

2. The reported issue is reproduced and confirmed. A list of affected projects and releases is made.

3. Fixes are implemented for all affected projects and releases that are actively supported. Back-ports of the fix are made to any old releases that are actively supported.

4. Packagers are notified via the salt-packagers mailing list that an issue was reported and resolved, and that an announcement is incoming.

5. A new release is created and pushed to all affected repositories. The release documentation provides a full description of the issue, plus any upgrade instructions or other relevant details.

6. An announcement is made to the salt-users and salt-announce mailing lists. The announcement contains a description of the issue and a link to the full release documentation and download locations.

39.2 Receiving security announcements

The fastest place to receive security announcements is via the salt-announce mailing list. This list is low-traffic.
Frequently Asked Questions

FAQ

- Is Salt open-core?
- I think I found a bug! What should I do?
- What ports should I open on my firewall?
- I'm seeing weird behavior (including but not limited to packages not installing their users properly)
- My script runs every time I run a state.apply. Why?
- When I run test.ping, why don’t the Minions that aren’t responding return anything? Returning False would be helpful.
- How does Salt determine the Minion’s id?
- I’m trying to manage packages/services but I get an error saying that the state is not available. Why?
- Why aren’t my custom modules/states/etc. available on my Minions?
- Module X isn’t available, even though the shell command it uses is installed. Why?
- Can I run different versions of Salt on my Master and Minion?
- Does Salt support backing up managed files?
- Is it possible to deploy a file to a specific minion, without other minions having access to it?
- What is the best way to restart a Salt daemon using Salt?
  * Linux/Unix
  * Windows
- Salting the Salt Master
- Is Targeting using Grain Data Secure?
- Why Did the Value for a Grain Change on Its Own?
40.1 Is Salt open-core?

No. Salt is 100% committed to being open-source, including all of our APIs. It is developed under the Apache 2.0 license, allowing it to be used in both open and proprietary projects.

To expand on this a little:

There is much argument over the actual definition of `open core`. From our standpoint, Salt is open source because

1. It is a standalone product that anyone is free to use.
2. It is developed in the open with contributions accepted from the community for the good of the project.
3. There are no features of Salt itself that are restricted to separate proprietary products distributed by SaltStack, Inc.
4. Because of our Apache 2.0 license, Salt can be used as the foundation for a project or even a proprietary tool.
5. Our APIs are open and documented (any lack of documentation is an oversight as opposed to an intentional decision by SaltStack the company) and available for use by anyone.

SaltStack the company does make proprietary products which use Salt and its libraries, like company is free to do, but we do so via the APIs, NOT by forking Salt and creating a different, closed-source version of it for paying customers.

40.2 I think I found a bug! What should I do?

The salt-users mailing list as well as the salt IRC channel can both be helpful resources to confirm if others are seeing the issue and to assist with immediate debugging.

To report a bug to the Salt project, please follow the instructions in reporting a bug.

40.3 What ports should I open on my firewall?

Minions need to be able to connect to the Master on TCP ports 4505 and 4506. Minions do not need any inbound ports open. More detailed information on firewall settings can be found here.

40.4 I’m seeing weird behavior (including but not limited to packages not installing their users properly)

This is often caused by SELinux. Try disabling SELinux or putting it in permissive mode and see if the weird behavior goes away.

40.5 My script runs every time I run a state.apply. Why?

You are probably using cmd.run rather than cmd.wait. A cmd.wait state will only run when there has been a change in a state that it is watching.

A cmd.run state will run the corresponding command every time (unless it is prevented from running by the unless or onlyif arguments).

More details can be found in the documentation for the cmd states.
40.6 When I run `test.ping`, why don't the Minions that aren't responding return anything? Returning `False` would be helpful.

When you run `test.ping` the Master tells Minions to run commands/functions, and listens for the return data, printing it to the screen when it is received. If it doesn't receive anything back, it doesn't have anything to display for that Minion.

There are a couple options for getting information on Minions that are not responding. One is to use the verbose (`-v`) option when you run salt commands, as it will display ``Minion did not return`` for any Minions which time out.

```
salt -v '*' pkg.install zsh
```

Another option is to use the `manage.down` runner:

```
salt-run manage.down
```

Also, if the Master is under heavy load, it is possible that the CLI will exit without displaying return data for all targeted Minions. However, this doesn't mean that the Minions did not return; this only means that the Salt CLI timed out waiting for a response. Minions will still send their return data back to the Master once the job completes. If any expected Minions are missing from the CLI output, the `jobs.list_jobs` runner can be used to show the job IDs of the jobs that have been run, and the `jobs.lookup_jid` runner can be used to get the return data for that job.

```
salt-run jobs.list_jobs
salt-run jobs.lookup_jid 20130916125524463507
```

If you find that you are often missing Minion return data on the CLI, only to find it with the jobs runners, then this may be a sign that the `worker_threads` value may need to be increased in the master config file. Additionally, running your Salt CLI commands with the `-t` option will make Salt wait longer for the return data before the CLI command exits. For instance, the below command will wait up to 60 seconds for the Minions to return:

```
salt -t 60 '*' test.ping
```

40.7 How does Salt determine the Minion's id?

If the Minion id is not configured explicitly (using the `id` parameter), Salt will determine the id based on the hostname. Exactly how this is determined varies a little between operating systems and is described in detail [here](#).

40.8 I'm trying to manage packages/services but I get an error saying that the state is not available. Why?

Salt detects the Minion's operating system and assigns the correct package or service management module based on what is detected. However, for certain custom spins and OS derivatives this detection fails. In cases like this, an issue should be opened on our [tracker](#), with the following information:

1. The output of the following command:

   ```
salt <minion_id> grains.items | grep os
   ```

2. The contents of `/etc/lsb-release`, if present on the Minion.
40.9 Why aren't my custom modules/states/etc. available on my Minions?

Custom modules are only synced to Minions when `state.apply`, `saltutil.sync_modules`, or `saltutil.sync_all` is run. Similarly, custom states are only synced to Minions when `state.apply`, `saltutil.sync_states`, or `saltutil.sync_all` is run.

Other custom types (renderers, outputters, etc.) have similar behavior, see the documentation for the `saltutil` module for more information.

40.10 Module X isn't available, even though the shell command it uses is installed. Why?

This is most likely a PATH issue. Did you custom-compile the software which the module requires? RHEL/CentOS/etc. in particular override the root user's path in `/etc/init.d/functions`, setting it to `/sbin:/usr/sbin:/bin:/usr/bin`, making software installed into `/usr/local/bin` unavailable to Salt when the Minion is started using the initscript. In version 2014.1.0, Salt will have a better solution for these sort of PATH-related issues, but recompiling the software to install it into a location within the PATH should resolve the issue in the meantime. Alternatively, you can create a symbolic link within the PATH using a `file.symlink` state.

```bash
#/usr/bin/foo:
  file.symlink:
    - target: /usr/local/bin/foo
```

40.11 Can I run different versions of Salt on my Master and Minion?

This depends on the versions. In general, it is recommended that Master and Minion versions match.

When upgrading Salt, the master(s) should always be upgraded first. Backwards compatibility for minions running newer versions of salt than their masters is not guaranteed.

Whenever possible, backwards compatibility between new masters and old minions will be preserved. Generally, the only exception to this policy is in case of a security vulnerability.

Recent examples of backwards compatibility breakage include the 0.17.1 release (where all backwards compatibility was broken due to a security fix), and the 2014.1.0 release (which retained compatibility between 2014.1.0 masters and 0.17 minions, but broke compatibility for 2014.1.0 minions and older masters).

40.12 Does Salt support backing up managed files?

Yes. Salt provides an easy to use addition to your file.managed states that allow you to back up files via `backup_mode`, `backup_mode` can be configured on a per state basis, or in the minion config (note that if set in the minion config this would simply be the default method to use, you still need to specify that the file should be backed up!).
**40.13 Is it possible to deploy a file to a specific minion, without other minions having access to it?**

The Salt fileserver does not yet support access control, but it is still possible to do this. As of Salt 2015.5.0, the `file_tree` external pillar is available, and allows the contents of a file to be loaded as Pillar data. This external pillar is capable of assigning Pillar values both to individual minions, and to `nodegroups`. See the documentation for details on how to set this up.

Once the external pillar has been set up, the data can be pushed to a minion via a `file.managed` state, using the `contents_pillar` argument:

```
/etc/my_super_secret_file:
  file.managed:
    - user: secret
    - group: secret
    - mode: 600
    - contents_pillar: secret_files:my_super_secret_file
```

In this example, the source file would be located in a directory called `secret_files` underneath the file_tree path for the minion. The syntax for specifying the pillar variable is the same one used for `pillar.get`, with a colon representing a nested dictionary.

**Warning:** Deploying binary contents using the `file.managed` state is only supported in Salt 2015.8.4 and newer.

**40.14 What is the best way to restart a Salt daemon using Salt?**

Updating the salt-minion package requires a restart of the salt-minion service. But restarting the service while in the middle of a state run interrupts the process of the minion running states and sending results back to the master. It’s a tricky problem to solve, and we’re working on it, but in the meantime one way of handling this (on Linux and UNIX-based operating systems) is to use `at` (a job scheduler which predates cron) to schedule a restart of the service. `at` is not installed by default on most distros, and requires a service to be running (usually called `atd`) in order to schedule jobs. Here’s an example of how to upgrade the salt-minion package at the end of a Salt run, and schedule a service restart for one minute after the package update completes.

**40.14.1 Linux/Unix**

```
salt-minion:
  pkg.installed:
    - name: salt-minion
      - version: 2014.1.7-3.el6
      - order: last
  service.running:
    - name: salt-minion
      - require:
        - pkg: salt-minion
  cmd.run:
    - name: echo service salt-minion restart | at now + 1 minute
      - onchanges:
        - pkg: salt-minion
```
To ensure that `at` is installed and `atd` is running, the following states can be used (be sure to double-check the package name and service name for the distro the minion is running, in case they differ from the example below.

```yaml
at:
  pkg.installed:
  - name: at
  service.running:
  - name: atd
  - enable: True
```

An alternative to using the `atd` daemon is to fork and disown the process.

```yaml
restart_minion:
  cmd.run:
  - name: |
    exec 0<&- # close stdin
    exec 1<&- # close stdout
    exec 2<&- # close stderr
    nohup /bin/sh -c 'sleep 10 && salt-call --local service.restart salt-minion' &
  - python_shell: True
  - order: last
```

### 40.14.2 Windows

For Windows machines, restarting the minion at can be accomplished by adding the following state:

```yaml
schedule-start:
  cmd.run:
  - name: 'start powershell "Restart-Service -Name salt-minion"'
  - order: last
```

or running immediately from the command line:

```
salt -G kernel:Windows cmd.run 'start powershell "Restart-Service -Name salt-minion"'
```

### 40.15 Salting the Salt Master

In order to configure a master server via states, the Salt master can also be ``salted`` in order to enforce state on the Salt master as well as the Salt minions. Salting the Salt master requires a Salt minion to be installed on the same machine as the Salt master. Once the Salt minion is installed, the minion configuration file must be pointed to the local Salt master:

```
master: 127.0.0.1
```

Once the Salt master has been ``salted`` with a Salt minion, it can be targeted just like any other minion. If the minion on the salted master is running, the minion can be targeted via any usual salt command. Additionally, the salt-call command can execute operations to enforce state on the salted master without requiring the minion to be running.

More information about salting the Salt master can be found in the salt-formula for salt itself:

https://github.com/saltstack-formulas/salt-formula
40.16 Is Targeting using Grain Data Secure?

Because grains can be set by users that have access to the minion configuration files on the local system, grains are considered less secure than other identifiers in Salt. Use caution when targeting sensitive operations or setting pillar values based on grain data.

When possible, you should target sensitive operations and data using the Minion ID. If the Minion ID of a system changes, the Salt Minion's public key must be re-accepted by an administrator on the Salt Master, making it less vulnerable to impersonation attacks.

40.17 Why Did the Value for a Grain Change on Its Own?

This is usually the result of an upstream change in an OS distribution that replaces or removes something that Salt was using to detect the grain. Fortunately, when this occurs, you can use Salt to fix it with a command similar to the following:

```
salt -G 'grain:ChangedValue' grains.setvals "'{}': 'OldValue'"
```

(Replacing `grain`, `ChangedValue`, and `OldValue` with the grain and values that you want to change / set.)

You should also file an issue describing the change so it can be fixed in Salt.
Glossary

**Auto-Order**  The evaluation of states in the order that they are defined in a SLS file. See also: *ordering*.

**Bootstrap**  A stand-alone Salt project which can download and install a Salt master and/or a Salt minion onto a host. See also: *salt-bootstrap*.

**Compound Matcher**  A combination of many target definitions that can be combined with boolean operators. See also: *targeting*.

**EAuth**  Shorthand for `external authentication’. A system for calling to a system outside of Salt in order to authenticate users and determine if they are allowed to issue particular commands to Salt. See also: *external auth*.

**Environment**  A directory tree containing state files which can be applied to minions. See also: *top file*.

**Execution Function**  A Python function inside an Execution Module that may take arguments and performs specific system-management tasks. See also: the list of execution modules.

**External Job Cache**  An external data-store that can archive information about jobs that have been run. A default returner. See also: *ext_job_cache*, the list of returners.

**Execution Module**  A Python module that contains execution functions which directly perform various system-management tasks on a server. Salt ships with a number of execution modules but users can also write their own execution modules to perform specialized tasks. See also: the list of execution modules.

**External Pillar**  A module that accepts arbitrary arguments and returns a dictionary. The dictionary is automatically added to a pillar for a minion.

**Event**  A notice emitted onto an event bus. Events are often driven by requests for actions to occur on a minion or master and the results of those actions. See also: *Salt Reactor*.

**File Server**  A local or remote location for storing both Salt-specific files such as top files or SLS files as well as files that can be distributed to minions, such as system configuration files. See also: *Salt’s file server*.

**Grain**  A key-value pair which contains a fact about a system, such as its hostname, network addresses. See also: *targeting with grains*.

**Highdata**  The data structure in a SLS file the represents a set of state declarations. See also: *state layers*.

**Highstate**  The collection of states to be applied to a system. See also: *state layers*.

**Jinja**  A templating language which allows variables and simple logic to be dynamically inserted into static text files when they are rendered. See also: *Salt’s Jinja documentation*.

**Job**  The complete set of tasks to be performed by the execution of a Salt command are a single job. See also: *jobs runner*.
Job Cache  A storage location for job results, which may then be queried by a salt runner or an external system. May be local to a salt master or stored externally.

Job ID  A unique identifier to represent a given job.

Low State  The collection of processed states after requisites and order are evaluated. See also: state layers.

Master  A central Salt daemon which from which commands can be issued to listening minions.

Masterless  A minion which does not require a Salt master to operate. All configuration is local. See also: file_client.

Master Tops  A system for the master that allows hooks into external systems to generate top file data.

Mine  A facility to collect arbitrary data from minions and store that data on the master. This data is then available to all other minions. [Sometimes referred to as Salt Mine.] See also: Salt Mine.

Minion  A server running a Salt minion daemon which can listen to commands from a master and perform the requested tasks. Generally, minions are servers which are to be controlled using Salt.

Minion ID  A globally unique identifier for a minion. See also: id.

Multi-Master  The ability for a minion to be actively connected to multiple Salt masters at the same time in high-availability environments.

Node Group  A pre-defined group of minions declared in the master configuration file. See also: targeting.

Outputer  A formatter for defining the characteristics of output data from a Salt command. See also: list of outputters.

Peer Communication  The ability for minions to communicate directly with other minions instead of brokering commands through the Salt master. See also: peer communication.

Pillar  A simple key-value store for user-defined data to be made available to a minion. Often used to store and distribute sensitive data to minions. See also: Pillar, list of Pillar modules.

Proxy Minion  A minion which can control devices that are unable to run a Salt minion locally, such as routers and switches.

PyDSL  A Pythonic domain-specific-language used as a Salt renderer. PyDSL can be used in cases where adding pure Python into SLS files is beneficial. See also: PyDSL.

Reactor  An interface for listening to events and defining actions that Salt should taken upon receipt of given events. See also: Reactor.

Render Pipe  Allows SLS files to be rendered by multiple renderers, with each renderer receiving the output of the previous. See also: composing renderers.

Renderer  Responsible for translating a given data serialization format such as YAML or JSON into a Python data structure that can be consumed by Salt. See also: list of renderers.

Returner  Allows for the results of a Salt command to be sent to a given data-store such as a database or log file for archival. See also: list of returners.

Roster  A flat-file list of target hosts. (Currently only used by salt-ssh.)

Runner Module  A module containing a set of runner functions. See also: list of runner modules.

Runner Function  A function which is is called by the salt-run command and executes on the master instead of on a minion. See also: Runner Module.

Salt Cloud  A suite of tools used to create and deploy systems on many hosted cloud providers. See also: salt-cloud.

Salt SSH  A configuration management and remote orchestration system that does not require that any software besides SSH be installed on systems to be controlled.
Salt Thin  A subset of the normal Salt distribution that does not include any transport routines. A Salt Thin bundle can be dropped onto a host and used directly without any requirement that the host be connected to a network. Used by Salt SSH. See also: thin runner.

Salt Virt  Used to manage the creation and deployment of virtual machines onto a set of host machines. Often used to create and deploy private clouds. See also: virt runner.

SLS Module  Contains a set of state declarations.

State Compiler  Translates highdata into lowdata.

State Declaration  A data structure which contains a unique ID and describes one or more states of a system such as ensuring that a package is installed or a user is defined. See also: highstate structure.

State Function  A function contained inside a state module which can manages the application of a particular state to a system. State functions frequently call out to one or more execution modules to perform a given task.

State Module  A module which contains a set of state functions. See also: list of state modules.

State Run  The application of a set of states on a set of systems.

Syndic  A forwarder which can relay messages between tiered masters. See also: Syndic.

Target  Minion(s) to which a given salt command will apply. See also: targeting.

Top File  Determines which SLS files should be applied to various systems and organizes those groups of systems into environments. See also: top file, list of master top modules.

__virtual__  A function in a module that is called on module load to determine whether or not the module should be available to a minion. This function commonly contains logic to determine if all requirements for a module are available, such as external libraries.

Worker  A master process which can send notices and receive replies from minions. See also: worker_threads.
